

SmartPalate Options: Medical Facilities

OPTION **Research**

1

Whether you study the applications of Electropalatography in a clinical setting, or use the SmartPalate to collect data, EPG research is an exciting opportunity! Topics previously or currently being studied include:

- **Articulation**
Cleft Palate, Hearing Impaired, Cochlear Implants, Deaf, Autism Spectrum, Dyspasia, TBI, Stroke & More
- **Accent Modification**
- **Tongue Thrust & Other Motor Oral Disorders**
- **Learning Disorders & More!**

OPTION **Clinical Use**

2

Medical facilities across the country are implementing the SmartPalate System into their programs with their clients. Implement the SmartPalate to offer your clients the most powerful & successful speech therapy tool that exists. The following are three ways you can use the SmartPalate with those clients:

- **Example Tool**
Clients who don't have their own SmartPalate can still benefit from seeing real-time visual feedback of the SLP's SmartPalate palatal contact, default & custom tongue targets & video/audio recordings.
- **Therapy Session Tool**
For some clients, an example will not be enough. These clients can get their own SmartPalate or have one provided to them by the medical facility. It can then be used onsite in the clinic with the medical facility's SmartPalate System.
- **Home Practice Tool**
Break the limitation of in-session only SmartPalate usage with the Student Membership. This option allows you to use the SmartPalate system as a "Home Practice Tool" allowing for a full single user system to be at the home of the client, apart from the clinic's system. It includes a SmartPalate & an additional 12+ membership benefits such as a full coverage warranty & free software training. With 80% of CompleteSpeech Student Membership users (home practice) being released from therapy within 6-month, there is no better option than using the SmartPalate as a "Home Practice Tool."
