

SmartPalate Options: Universities & Colleges

OPTION **Research**

1

Whether you study the applications of Electropalatography or Biofeedback in a clinical setting, or use the SmartPalate to collect data, EPG research is an exciting opportunity! Topics previously or currently being studied with the SmartPalate can be requested by CompleteSpeech.

OPTION **Clinical Use**

2

Universities across the country are implementing the SmartPalate System into their clinics for use with clients & graduate students, giving them the most powerful & successful speech therapy tool that exists. The following are three ways you can use the SmartPalate with clients:

- **Example Tool**

Clients who don't have their own SmartPalate can still benefit from seeing real-time visual feedback of the clinicians SmartPalate palatal contact, default & custom tongue targets & video/audio recordings.

- **Therapy Session Tool**

For some clients, an example will not be enough. These clients can get their own SmartPalate or have one provided to them by University. It can then be used onsite in the clinic with the University's SmartPalate System.

- **Home Practice Tool**

Break the limitation of in-session only SmartPalate usage with the Student Membership. This option allows you to use the SmartPalate system as a "Home Practice Tool" allowing for a full single user system to be at the home of the client, apart from the University's system. It includes a SmartPalate & an additional 12+ membership benefits such as a full coverage warranty & free software training.

OPTION **Classroom Learning**

3

The SmartPalate can be used in a classroom setting as a teaching tool to show future SLPs the advancements in technology, the tools that are available to them, & alternative methods to traditional therapy. The following types of courses are great options for course implementation of the SmartPalate System:

- **Phonetics**
- **Disorders of Articulation & Phonology**
- **Assessment & Diagnosis**
- **Any course covering disorders that can be studied or treated with the aid of the SmartPalate System**
