

The SmartPalate Software on a Mac

Virtual Machines

While SmartPalate 2.5 is only guaranteed to be compatible with Windows 7, 8, & 10, there is success using a virtual machine or partition to run Windows on your Mac. These programs create a virtual or partitioned space on Mac computers to install Windows & run Windows software. Some examples of these or similar programs are:

BootCamp

Parallels

VMware

For Success

These programs have been reported by customers to work in running the SmartPalate 2.5 software on a Mac. CompleteSpeech does not guarantee full functionality using these programs, nor do we offer support for third party software. See membership documents for minimum standards of success. For the best results:

- While using a virtual machine, prioritize CPU & memory usage for programs running in Windows.
- Work with the Support team of your chosen software to optimize settings for use with programs that require high processing power.

CompleteSpeech is in no way affiliated with, & is not responsible for the use of Microsoft Windows, Macintosh, Boot Camp, Parallels, VMware, or any other third party software program.
