

# Software Defined Perimeter (SDP): Awareness and Adoption

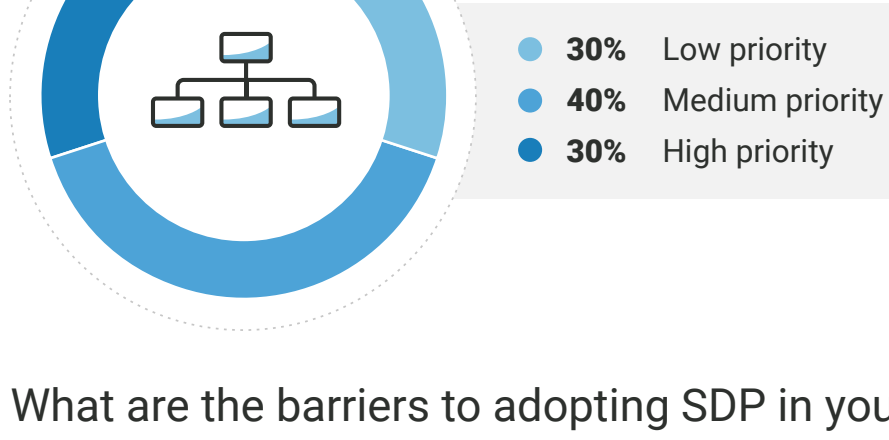

A majority of organizations recognize the need to change their approach to user access control. SDP is seeing early market adoption and awareness, with understanding of the benefits it provides. However, organizations face challenges in making the case for using SDP instead of traditional security technologies. CSA will fill this gap with SDP resources and information.

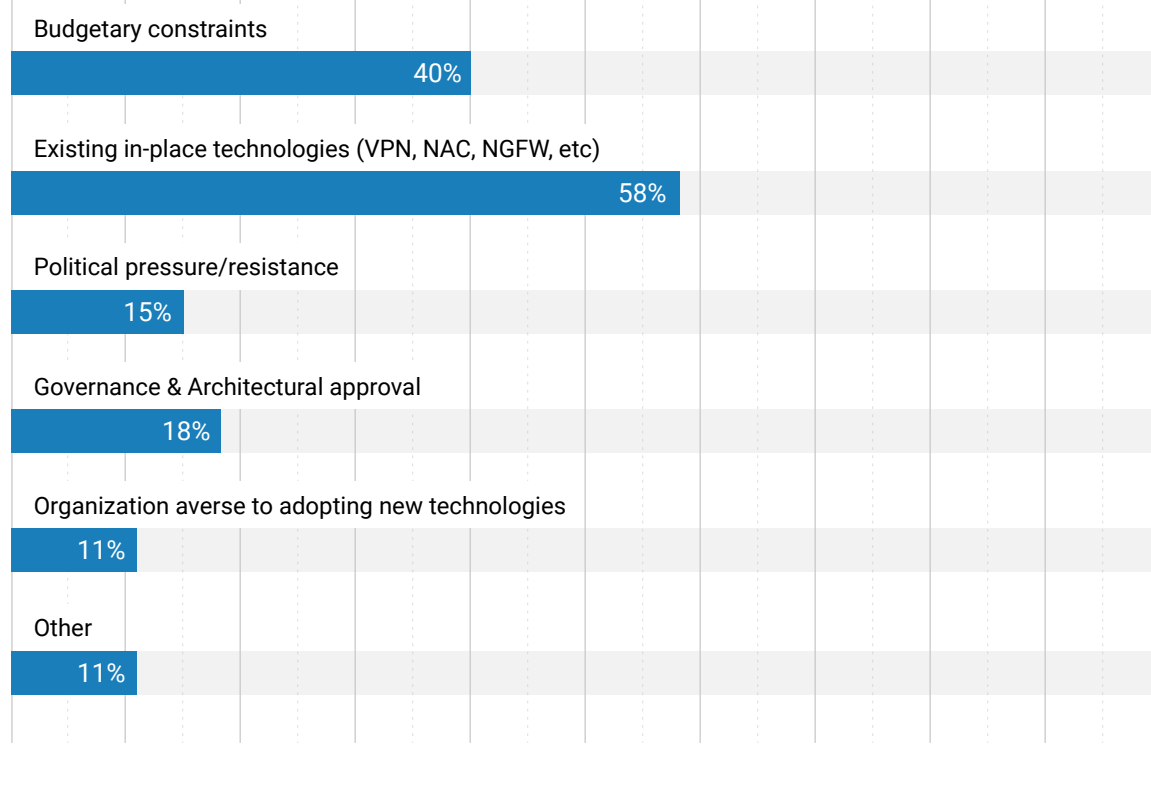

## 1 How familiar are you with Software-Defined Perimeter?

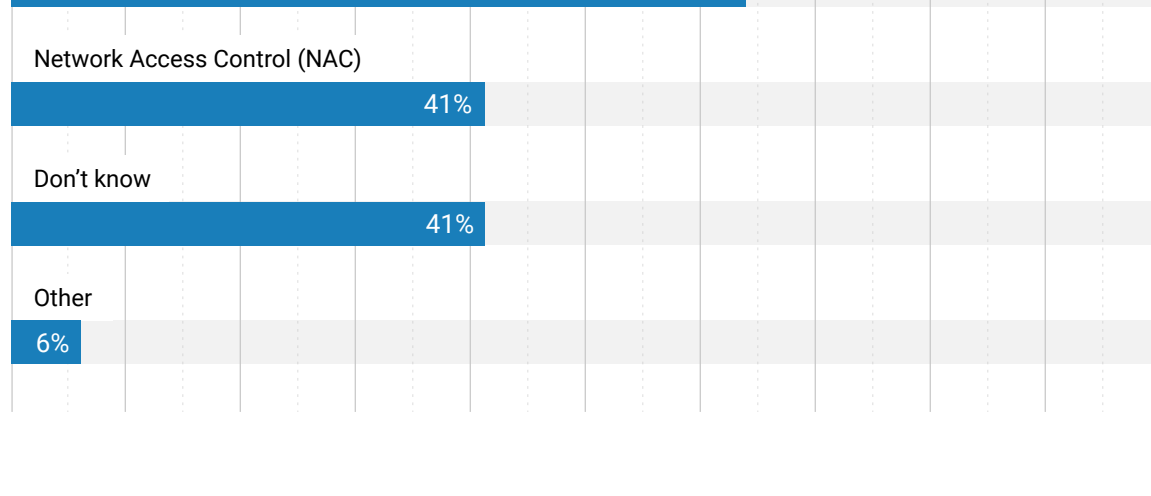

## 2 What is the priority level of changing the approach to access control in your organization?

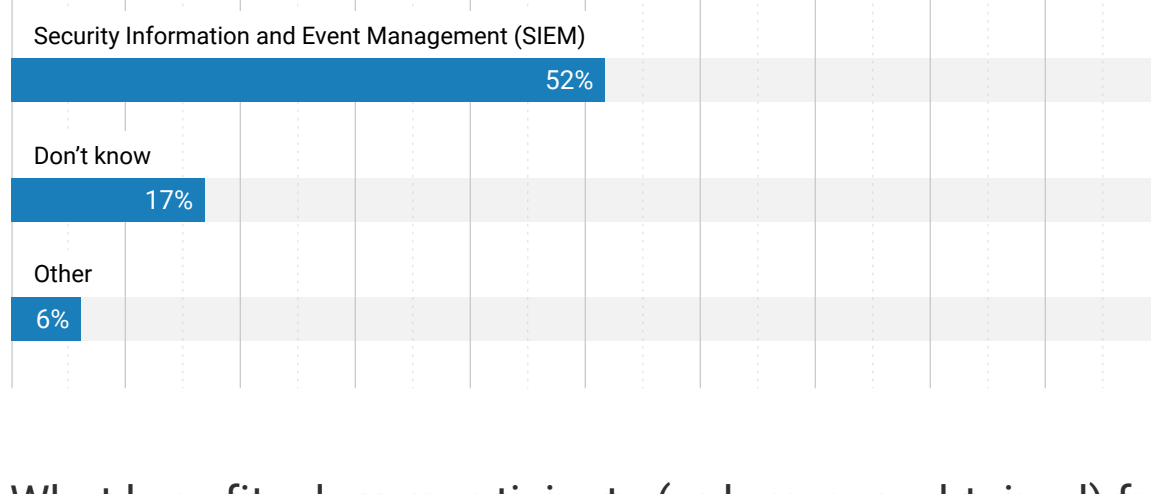

## 3 What are the barriers to adopting SDP in your organization?

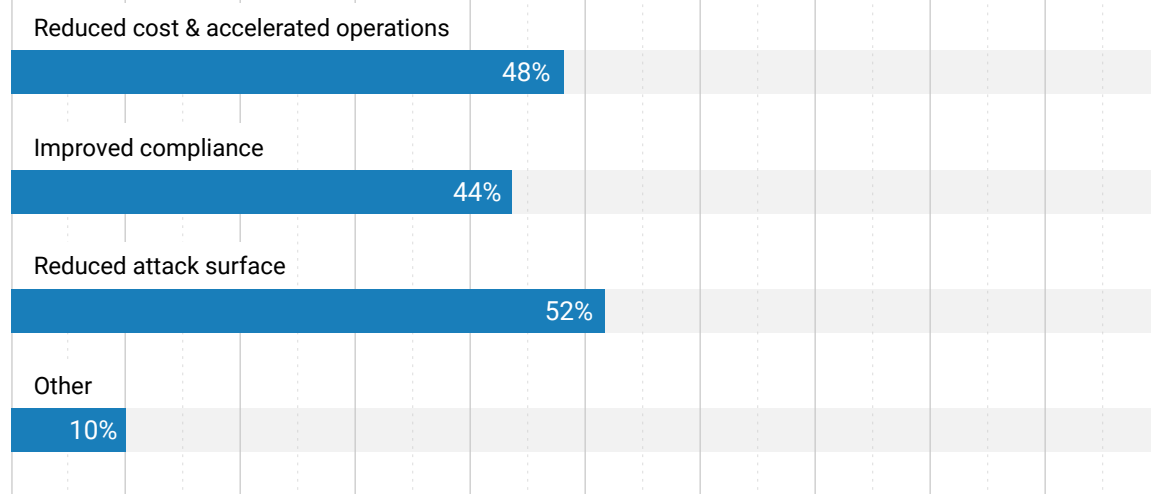

## 4 Which existing technologies do you see as the biggest barrier to SDP adoption?

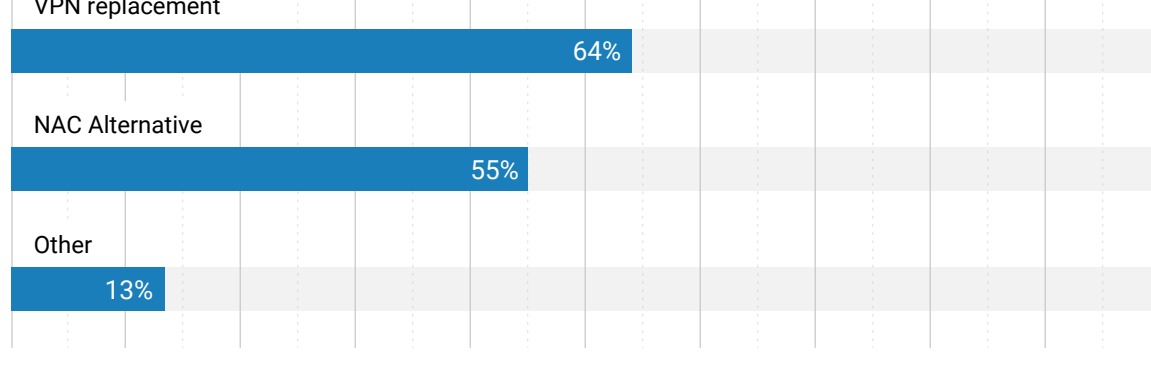

## 5 Which existing technologies do you anticipate will most benefit from an SDP deployment?

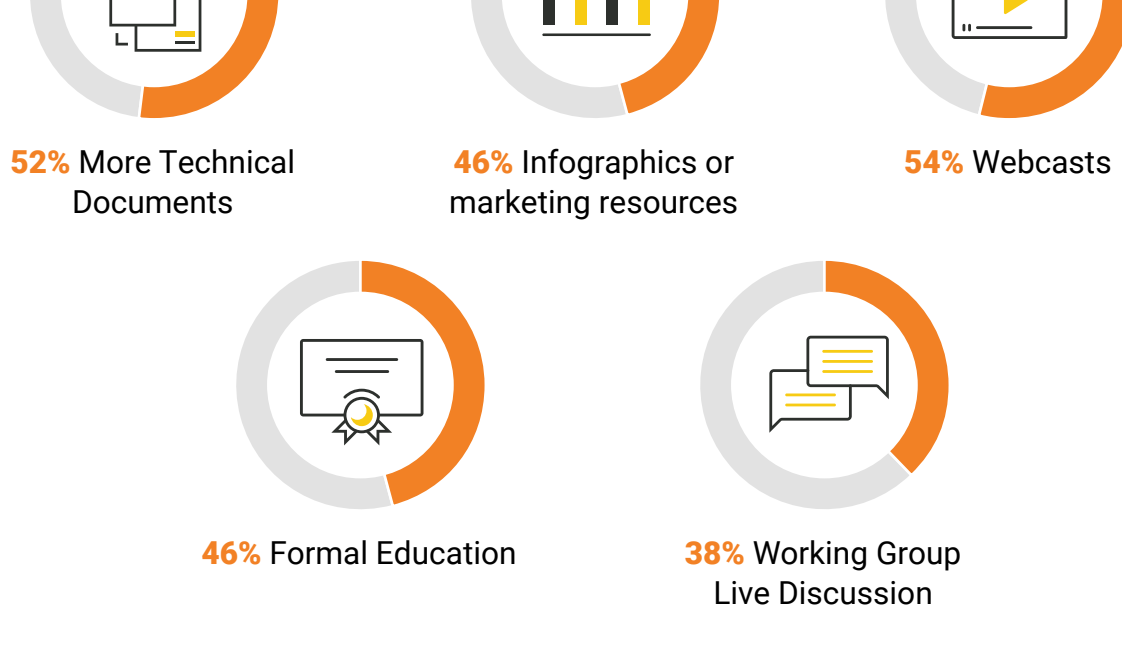

## 6 What benefits do you anticipate (or have you obtained) from an SDP deployment?

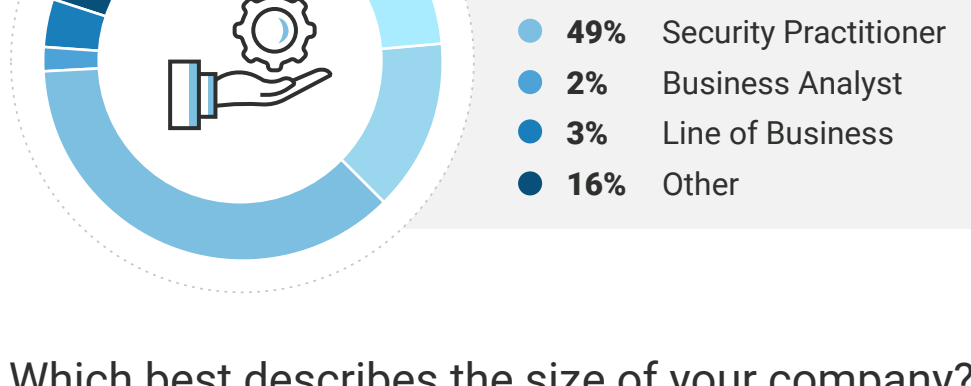

## 7 Why (or How potentially) is your organization using SDP? (select all that apply)

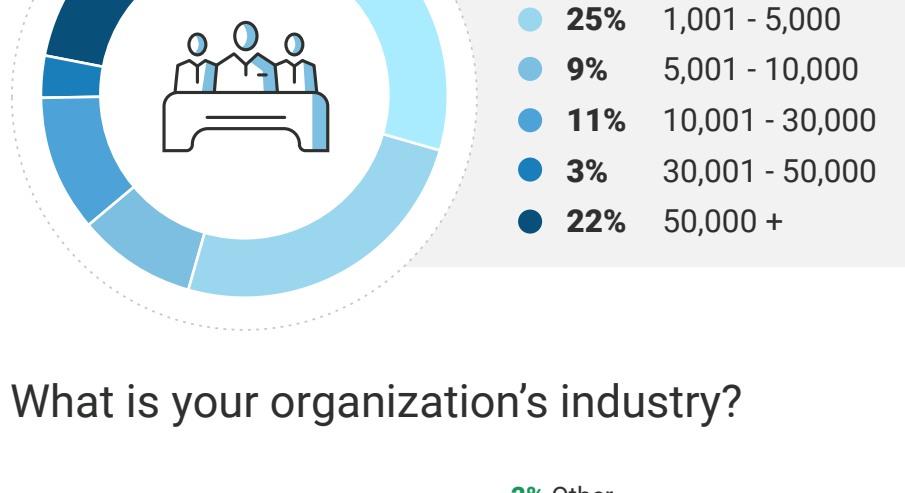

## 8 What would help you better adopt & use SDP in your organization?

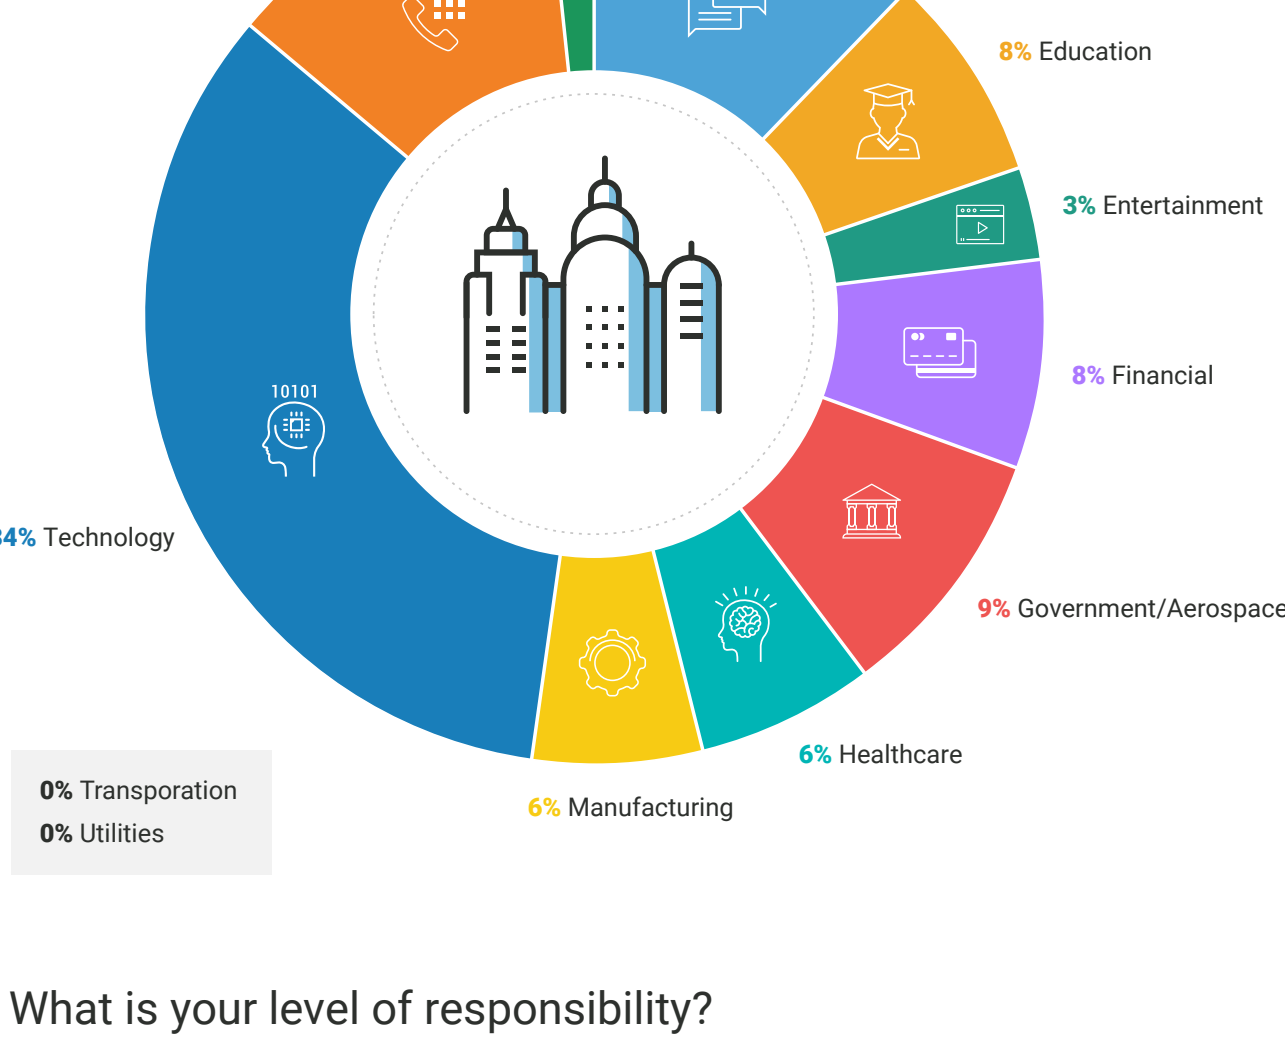

## 9 What role do you have in your organization?

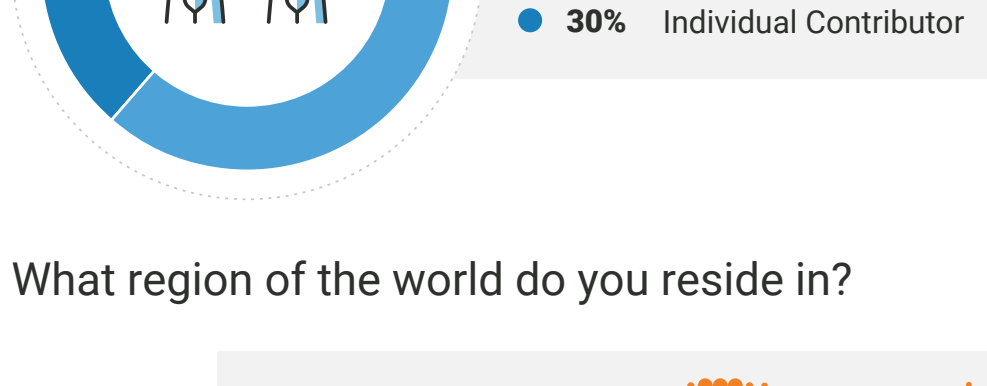

## 10 Which best describes the size of your company?

## 11 What is your organization's industry?
