Read and Write to Solve!

Use what you know about multiplication pictures to solve the problems.

Do you remember the parts of a division sentence? Draw a circle around the dividend. Draw a square around the divisor. Draw a triangle around the quotient.

$$\underline{15} \div \underline{5} = \underline{3}$$

Read about the astronauts and their missions. Then write the correct dividend, divisor, and quotient on the lines.

Example:

There are 20 astronauts going to the Moon. There are 5 rockets. Each rocket has 4 astronauts on board.

$$\underline{20} \div \underline{5} = \underline{4}$$

1. There are 24 astronauts going to the Moon. There are 8 rockets. Each rocket has 3 astronauts on board.

$$\underline{\quad} \div \underline{\quad} = \underline{\quad}$$

2. There are 35 astronauts going to Mars. There are 5 rockets.
Each rocket has 7 astronauts on board.

$$\underline{\hspace{1cm}} \div \underline{\hspace{1cm}} = \underline{\hspace{1cm}}$$

3. There are 48 astronauts going to the Moon. There are 6 rockets.
Each rocket has 8 astronauts on board.

$$\underline{\hspace{1cm}} \div \underline{\hspace{1cm}} = \underline{\hspace{1cm}}$$

4. There are 54 astronauts going to Mars. There are 9 rockets.
Each rocket has 6 astronauts on board.

$$\underline{\hspace{1cm}} \div \underline{\hspace{1cm}} = \underline{\hspace{1cm}}$$
