

## Mixed Practice

Willem has been learning to solve equations in his math class.

His math book is filled with equations, and Willem is starting to notice how his world is also full of equations.

Willem sees equations when he goes to the grocery store with his mom.

He also sees them when he is at the movie theater with his friends and when he is at baseball practice.

Willem even sees equations in his favorite video games!

All of these equations have different operations.

This means that Willem needs to pay close attention to the operational sign in each equation so he can use the right inverse operation to solve it.

In this lesson you and Willem will be solving equations that have a mix of addition, subtraction, multiplication, and division signs.
