

## LOUNSBERRY PEDALS ARO-1 “AMP RESCUE”

### OVERVIEW:

Meet the "Amp Rescue". Smooth and tubelike, it was designed to make your Solid State amp sound like a Tube Amp, but it's real intent is to give great dynamics, chime, and drive to an amp that (maybe) you don't like the sound of very much. Sometimes a new amp is just not in the budget. When we demonstrated the prototype to some players in Atlanta, one exclaimed "It rescues a bad Amp!". What a great idea for a name.....

### OPERATION;

Nothing could be simpler. Advance the “Drive” control to add fatness, grit and overdrive (depending on level). Use the “Level” control to balance the level against the bypassed signal. True bypass is available via the stomp switch. Use 1/4” T/S cables only. The use of a TRS cable at the input defeats the power switch. Unplug the input cable when not in use to preserve battery life.

### POWER SUPPLY:

The Amp Rescue operates on a standard 9v battery, or external pedal supply. Power is switched automatically when the DC jack is used. The specs are:

9 volts  
100ma  
2.1mm x 5.5 mm plug  
Negative tip

The Boss PSA adapter is a good choice
