**Just 3
easy steps -
for complete pelvic
floor assessment:**

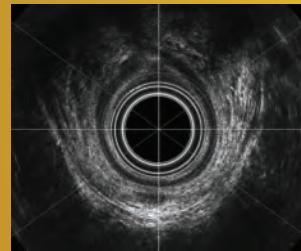

1) Ready

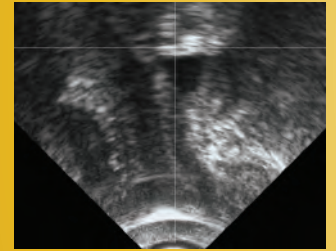

Enter patient ID
and prepare desired probe.

2) Aim

Identify key landmarks.

Puborectalis muscle

Pelvic floor structures

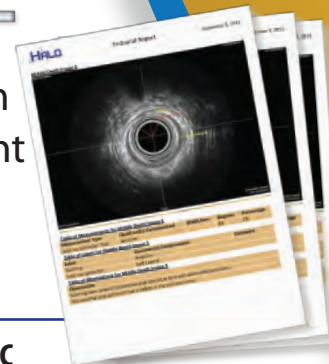

3) Record

Click scan and record
anal canal pull-through,
pelvic floor maneuvers
or endovaginal exam.

It's that simple.

Continue exam with additional
probes as indicated,
saving videos as you go.
Post-process when it's
convenient for you!

Revolutionize Your Pelvic Floor Practice

CATALYST^{XL}

Pelvic Floor Ultrasound System

Offer your patients comprehensive pelvic floor diagnostics, in your own office

- Gold standard diagnostics for fecal incontinence
- Surgical mesh detection and functional evaluation
- Pelvic floor muscle assessment and visual biofeedback
- Comprehensive multicompartamental imaging

Three probes for multicompartamental imaging

MidCrystalTM 360° Endoanal Probe

- Ergonomic design for imaging entire anal canal
- High density, radial rotating crystal for accurate imaging of anal sphinter defects

HALOTM Transperineal Probe

- Large patient contact area for imaging entire pelvic floor
- Perfect for visualizing mesh implants and functional maneuvers

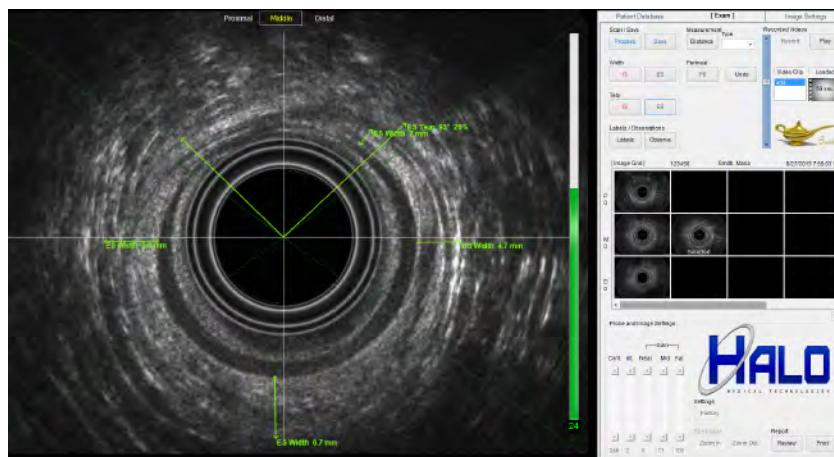

HALOTM Endovaginal Probe

- Versatile probe for introital and endovaginal ultrasound
- Detailed examination of pelvic structures and mesh location

Specialized software for optimized imaging, easy annotation, and video playback

- "A.C.E. Certification" delivers the best image possible
- Intuive software guides clinician, activating appropriate options at each stage
- Unique video recording feature allows complete post-processing after the study, reducing exam time and maximizing staff efficiency
- Precise, menu-driven labels and pre-installed observations simplifies documentation
- Auto-generated, comprehensive reports sent to file or EMR
