
EVH Spec Settings

In order to achieve Ed's tone with your new mod, one must follow these guide lines.

Settings should be as follows:

- Presence 10
- Bass 3
- Middle 10
- Treble 10
- Volume 1, 10
- Volume 2, 0

Bass setting will depend on the type of guitar and pickup being used. Weaker pickups will require a heavier bass setting and a hotter pickup will require less bass. The rest of the controls will be dimed (with the exception of Volume 2) for maximum saturation/breakup. Master Volume will then be used to control volume db level.

Enjoy your new EVH Spec Mod
