

SOUL Side

**SOUL, MOTOWN
DISCO, FUNK**

The diagram above illustrates a generic layout with approximate space requirements, we appreciate that each venue will vary and the band will alter its line up as best as it can to suit the area provided however, as a planning guide the performance area should be 5m (approx. 16ft) wide by 3.5m (approx. 11.5ft) for the band to be able to perform adequately.

The stage area must be flat, dry & solid and for best audience viewing the stage area should be slightly raised (this is not essential). The recommended power requirements are 2 x 13 amp main sockets for the PA and 2 x 13 amp sockets for the lighting system (for external generators the band PA and lighting use a maximum of 11 amps).

Our mixing desks and sound/lighting engineer needs to be positioned at the back of the venue, preferably central to the band but if space does not allow this then positioned at the left or right hand side of the stage area. The mixing desk requires 1 x 13 amp socket and there needs to be provision to run an audio/lighting cable from the mixing desks to the stage area.

SOULSIDE Quick Checklist:

Setup & sound check = 120 minutes

Pack-up equipment = 45 minutes

Requirements = A room big enough for 11 people to change and store instrument cases and empty equipment boxes preferably close to the stage area.
