

**IS THE EARTH STILL GETTING WARMER?
ANALYSIS OF 2003-2013 DECADAL NORMALIZED TEMPERATURE CHANGE
FOR ALL STATIONS FROM TIME SERIES BROWSER (a)**

ALL STATIONS (b)

Stations Downloaded by Model	7,277 (j)
Stations Selected by Model	7,236 (j)
Number of Observations Used =N	1,188 (b)
Average Decadal 2003-2013	
Temperature Change Degrees C	-0.028 (h)
Standard Deviation	0.966 (h)
T Test	-0.983 (f)
Increase/Decrease	Decrease
Statistically Significant @95%? (g)	No
Weighted Average Composite	0.149 (h)
Estimated T Test of Composite	5.324 (i)

Composite Warmer than	
Arithmetic Average?	Yes
Difference	0.177

(a) Computed from Climate Time Series Browser annual data normalized using 1900-1950 average.

(b) See below for stations in each group and for station URLs. As only appx 1,000 stations can be downloaded at a time I used vegetation type to populate 10 buckets containing all stations, from which I then removed all zero readings and those in excess of 2 degrees per decade in absolute value, to exclude stations without data and outliers, arriving at figure for stations with valid data of 1,188.

(c) Composite figure for selected station group per Climate Time Series Browser.

(d) Arithmetic average of individual stations' decadal temperature changes derived from annual data.

(e) Standard deviation of observations.

(f) Average/(Standard deviation of observations/square root of number of observations).

(g) Considered statistically significant for absolute value of T-Test equal to or greater than 2.

(h) Composite changes are weighted not arithmetic average of the figures for the station groups; average and standard deviation figures are calculated using the observations as a single group.

(i) Estimated making simplifying but somewhat heroic assumption that N and STDEV for composite are same as those computed for average despite persistent and often substantial differences between composites and corresponding group averages.

(j) Unclear why both these figures are greater than the apparent total of 7,169 stations in the Browser's station list.

If any URLs below are truncated after converting this Excel file to PDF they are pasted in full in the last box of the class project; also sorry the Coursera infrastructure won't allow Excel files as attachments!
