

Hogeschool Utrecht (HU)

Empowering the teachers to implement a massive educational program

Description Hogeschool Utrecht (HU) is a master level University of Applied Sciences with an ambitious plan – they simply wanted to be the best higher education institute in Holland at blended learning and incorporate this into their comprehensive Life Long Learning concept.

The goal was to produce 1700 blended learning courses of 140 study hours and above - incl. many at bachelor and masters level within 5 years. Within the same timeframe more than 60% of the teachers should actively be using Eureka to produce content and engaging students in the blended learning classes.

This ambitious goal was reached two years ahead of time! In little over 2 years HU is now the unchallenged number one in Holland with regards to number and quality of online and blended learning courses offered. 80% of the teachers use Eureka engaging more than 70.000 students and teachers attending the online and blended learning courses. HU kept up the pace and more than 2000 educations were active in 2016.

The goal was reached through a close partnership in which Mentorix helped the teachers and students make the most of the platform and the custom built authoring interface. At the same time the close partnership helped insure that the platform supports the tools and facilities to support the latest didactical methodologies, directed by educational specialists at the HU. This makes Eureka uniquely suited to higher education.

Amount 2,1 mil € over 5 years including full SLA for both the full LMS, integrations, API's and ongoing development.

Start date March 2015

End date December 2018
