About Zignuts Technolab

Zignuts Technolab is a young creative team that brings ideas to life. We strive to excel in the invention and development of the industry's most advanced technologies including mobile apps, web, eCommerce, mCommerce, IoT, Wearables, cloud integration, cross-platform, on-demand, enterprise mobility and alike. We translate these technologies into value for our clients' customers giving them professional and best-in-class services; thereby helping businesses throughout the world harness their full potential.

About Zignuts Technolab

Be Real:

We believe in maintaining integrity and transparency forever with our clients and our colleagues. We run our company with unquestionable ethics.

Passionate & Innovative:

Passion and innovation are a part of our DNA. We strive to serve businesses with solutions built with the right mix of these qualities.

Be Accountable:

We take responsibility of whatever we promise to our clients and live up to their expectations. We include them in the decision process.

Making a Difference:

With a freedom of thought and team diversity, we work towards exclusivity and changing the way products and services reach to the market.

Dedicated To Bring Innovative Ideas To Reality For Global Startup

Zignuts, as a fastest growing startup collaborator and a great incubator of unique concepts and ideas, delivers scalable IT solutions that can sustain rapid growth, help implement expansion plans, and enable risk reduction. We also assist startups in early adoption of cutting-edge technology in order to gain competitive advantage and outperform the competitors.

Re-engineering:

We analyze the existing websites and mobile apps of the startups and optimize and re-engineer their products to meet their future business goals.

Minimal Viable Product (MVP):

Startups can collaborate with Zignuts to fulfill their MVP needs. MVP is a product with minimal features to cater to early customers and to provide inputs for future product development.

Startup/Product Advisory:

Our expert IT consultants build a roadmap to overcome the criticalities of starting a business and provide value-added business and technology consultation to the startups to hike the chances of success.

Product Engineering Services:

From product idea and software configuration to product design, development, testing, and maintenance and support, we offer end-to-end product engineering services.

jQuery

Android TV

Android

PHP

RESTful API

MySQL

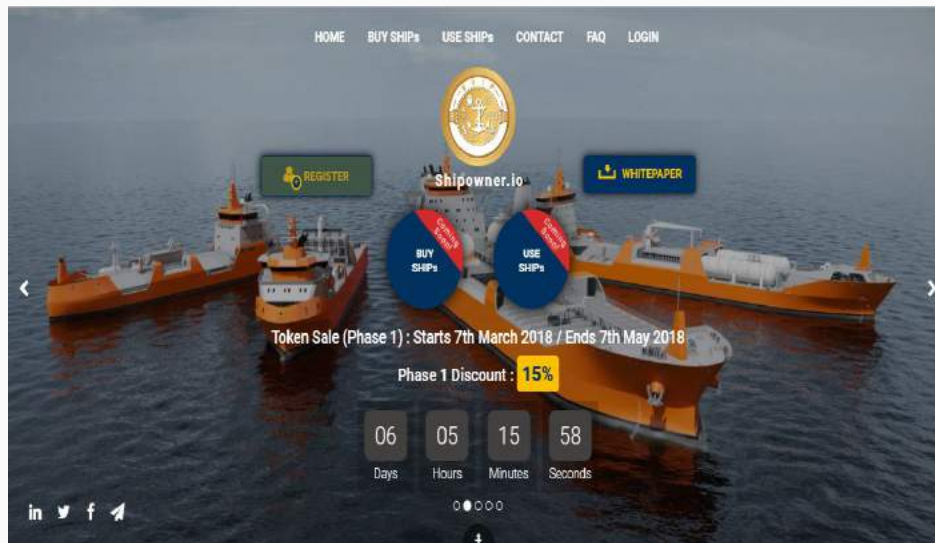

PROJECT SUMMARY

The BizimTV is an IPTV & Video On Demand Solution for android based TV. It allows you to track your favorite stations, movies and series at any time from anywhere. What you need to do is certainly no laptop, no satellite dish and no nerve-racking installations. You just need an internet connection and an Smart TV.

This was a project providing complete IPTV & Video on Demand solution with hardware integration as a part. Our client wanted to build an Android based application which could run in their set-top box, also we have to provide a Web based CMS solution which enables client to manage different user accounts and subscriptions efficiently. The project was conceptualized, designed & developed in our technolab from scratch.

Location: Hannover, Germany

SHIPOWER - CRYPTO PROVIDER IN SHIPPING INDUSTRY

QUICKCONNECT - SIMPLICITY OF NETWORKING (Web, ANDROID & IOS APPs)

PROJECT SUMMARY

The Quickconnect app connects users through a personalized QK-Identification-Code (QK-Tag). This Tag contains the user's list of social platforms, including but not limited to LinkedIn, Facebook, Twitter, Snapchat, Instagram, Xing, etc. Once connected with another user, both parties can follow/befriend/connect with the other user's social media platforms, with one click. Another feature, allows users to request the other's contact information. As soon as the request is confirmed, the selected contact information is automatically downloaded into the phone's contact book. (*Project In Development*)

COUPONICUS - EASY COUPONS

PROJECT SUMMARY

Couponicus makes coupon marketing as easy as never before, Determine specifying the nature of the coupon and the discount itself or fallback to a coupon our proposals.

It distribute coupons on user's website, social media Autritten and email. They need to set the various distribution channels once and then use it for all their coupons this. On their site, the coupons are integrated by means of a Widgets. This method is used for example also in the integration of YouTube videos or visitor counters. This requires the widget code to be copied only once in the HTML code of your website. If this is too complicated, we can send instructions to user's web pages maintainer for this integration will be no problem. As soon as the Java widget is integrated once any amendments thereto automatically adopted.
