

Builder Monitoring App Dev for Construction Company

PROJECT DETAILS

 Mobile App Development

 Mar 2022 - Jun 2022

 \$10,000 to \$49,999

“
"They're committed, open-minded, and have lots of interesting ideas and advice."

PROJECT SUMMARY

Fundacja To Get There developed a monitoring app for a construction company. The team initially created conceptual designs. After the designs were approved, they developed, tested, and debugged the product.

PROJECT FEEDBACK

The app helped the company monitor their builders more effectively. Fundacja To Get There's workflow was efficient, and their members managed the project smoothly. They communicated openly with the client through emails and in person. The team suggested great solutions that led to the app's success.

The Client

Please describe your company and your position there.

I am Commercial Support of a construction company from Bourne,

The Challenge

For what projects/services did your company hire Fundacja To Get There, and what were your goals?

So far, we have monitored the construction machine where it is using a board in the office, which made access and editing of this information much more difficult. We decided that a solution that would allow us to make these changes and view the locations not only in the office, but also in any other place would be very helpful

The Approach

How did you select this vendor and what were the deciding factors?

We started cooperation with the Foundation thanks to recommendations and a familiarization interview

Describe the scope of work in detail, including the project steps, key deliverables, and technologies used.

The project ran very smoothly. After presenting our problem, the Foundation developed a solution and presented a mock-up of its idea. The approved conceptual design began to turn into a ready application. After completing the work, we were able to test the application, and the reported bugs were efficiently implemented.

How many resources from the vendor's team worked with you, and what were their positions?

A project manager was assigned to be our main point of contact throughout the project. If necessary, the meetings were also attended by a developer and a UK specialist.

The Outcome

Can you share any measurable outcomes of the project or general feedback about the deliverables?

Thanks to the application, we could see where each of our builders is at any time. We didn't have to ask anyone else to check whether to go to the office to see it on the blackboard.

Describe their project management style, including communication tools and timeliness.

Team was open to many forms of communication, in the end we decided to use traditional email communication - it was the most convenient for us. Despite the distance, we even had the opportunity to meet live at our headquarters. The project ran as planned.

What did you find most impressive or unique about this company?

We value cooperation in which the contractor will not only perform the task, but also engage in the project and suggest beneficial changes. The Foundation is definitely capable and willing to get involved in the project.

Are there any areas for improvement or something they could have done differently?

The entire cooperation ran smoothly and we are so pleased that it did not end with one project.
