How to get in touch

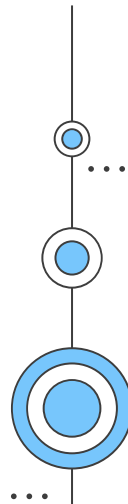

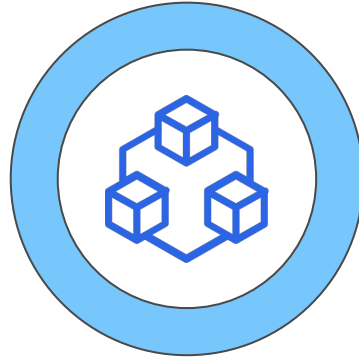

01

Company

About us

Who are we?

CloudFlex is a team of Ukrainian professionals who bring to life the idea that our relationship with our customers is key to product success

We care about the products we are working on and what people feel when they use these products

...

Our Competences

01

Data Science & Architecting

In love with **math, statistics** and **AI**. Matlab/ETL/Dashboards/Scikit/Keras/PyTorch - we feel like a fish in water when working with

02

Web

We build Web using React + Typescript or Angular. Of course we are proficient in HTML/CSS/JS and modern saga & redux

03

Backend

We like building backends with Python since it's reliable, easy to maintain and data-science friendly. Among others: Java, Node.js and Go

04

Mobile

Native apps in Kotlin/Java or Swift/Obj-c. Cross platform solutions in Flutter or KMM

Our Process

1. Analysis

We analyse client's ideas to understand their domain

Ongoing support

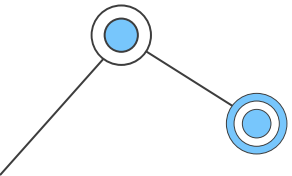

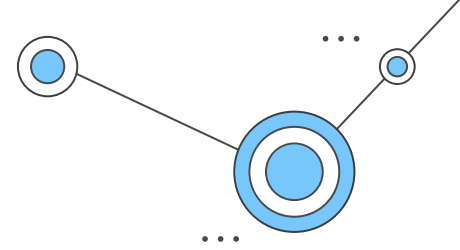

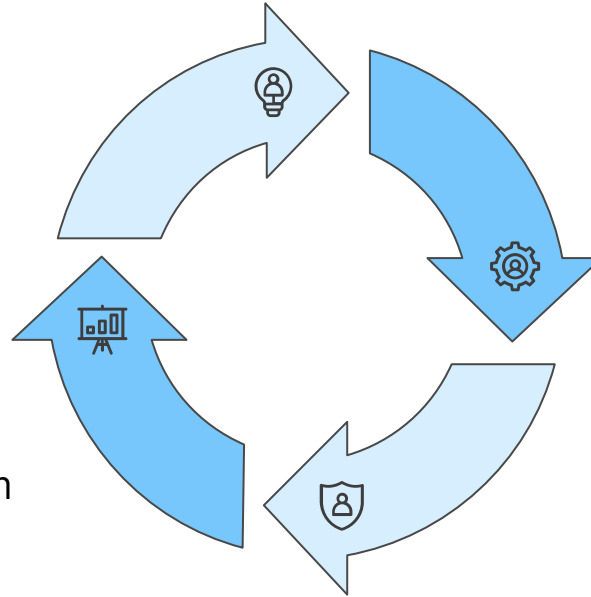

We support in production

2. Design and Development

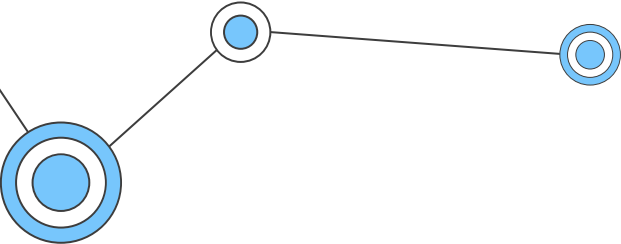

Design - develop - deploy

3. Testing

We test and integrate with existing systems to ensure quality

...

...

“CloudFlex has successfully reduced the measurement device's calibration and setup speed by **10** times. Also, they've improved the app's interaction with proprietary hardware, which enables higher measurement accuracy”

– Benjamin Megerle, CTO & Board Member, CyanoGuard

02

Case Studies

Products we are proud of

GoShopWithAi

The platform leverages the power of AI to help you find local shops and pick dressing as if your assistant is celebrity

- NTLK (natural language processing)
- CLIP for connecting images with phrases
- Vector search over hundreds of thousands of vendors
- Several thousand of features of each product

Key results:

- Helped to raise 5 figures of investments
- Optimized feature extraction to cost 200\$ instead of 15k\$
- Full ownership all over the project (AI, Backend, Frontend, Testing)

BRAND SEARCH

WEB | BACKEND | BA | QA | DATA ENGINEERING

Cyanoguard

CYANO GUARD

ANDROID | WEB | BACKEND | BA | QA

Cloudflex

Cyanoguard is a complex cyanide monitoring system for manufacturing. It consists of several components, including:

- Business intelligence dashboards (data science and AI for predictions)
- Customer portal and admin panel
- Android app + hardware connection

The team did a great job implementing and improving the project. Android & Web are **100% crash free** no matter how challenging the environment.

Assortment Manager

ASSORTMENT MANAGER

DATA SCIENCE

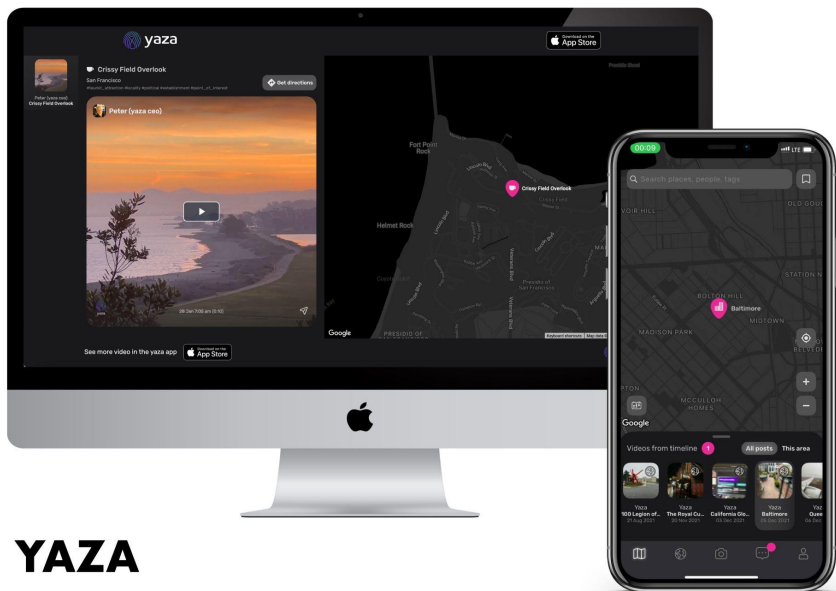

Assortment manager is a game changer in retail that leverages the power of data science to gain more ... insights into the products customers need most.

- Interactive dashboards for managers
- Powerful mathematical core to get precise analytic insights
- Flexible data ingestion layer

The project was implemented from scratch and successfully delivered to the end customer. The team continues extending and improving the system to get the most from the collected data.

CertifyIt (former Yaza)

YAZA

IOS | WEB | BACKEND | BA | PM | QA

Cloudflex 

Yaza is an advanced real-time video app that guarantees video authenticity. It is used as a tool to fight fake news. It has both consumer and enterprise versions and can be used as a CMS to easily find specific videos via a map interface or by using tags generated by an AI image classifier.

The Yaza project was transferred to us. We are working with the client to improve performance and scalability from the original design, and have already made real progress, including with the performance of the AI.

Mycroft

MYCROFT

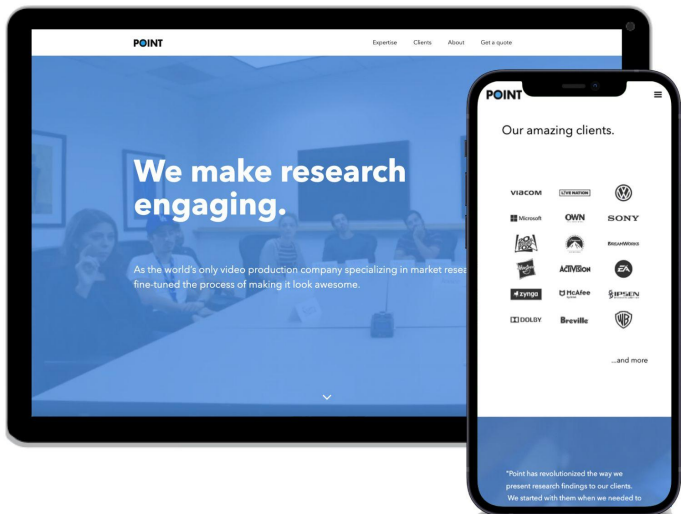

WEB | BACKEND | IOS | BA | QA | SUPPORT

Mycroft is a video conferencing platform for conducting market research remotely. Simple yet ... powerful, the platform brings video calls to everyone who needs in-depth analysis of a market.

Our team handled this project from the beginning:

- Designed the architecture and UX
- Developed, tested and deployed
- Delivered real-time video processing engine
- Delivered live surveys and recording
- Conferences support up to 60 visitors

POINT

WEB | BACKEND | ANDROID | IOS | BA | QA

Point

Point is a high quality video streaming service offering real time performance for researchers.

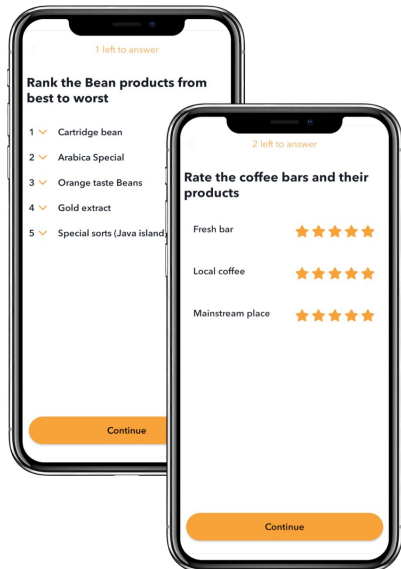

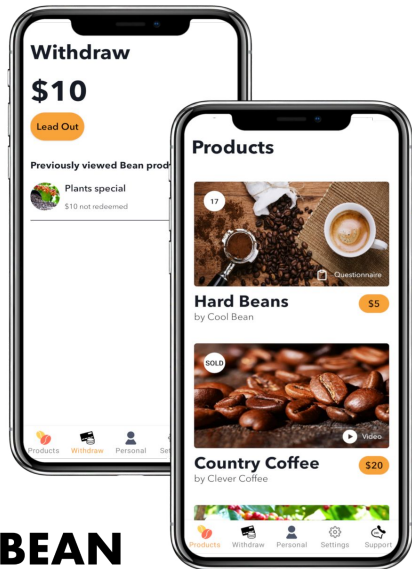

A cornerstone of the app is improving market research using techniques adapted from video journalism.

Our team developed a proprietary video streaming platform and supported it for years, enhancing the user experience and adding new features.

We also built an intelligent business dashboard customized to the client's needs.

Bean

BEAN

IOS | ANDROID | BACKEND | QA

Cloudflex 

Bean is a marketplace to gather opinions of clients for specific niches using surveys to aggregate data. It helps brands offer more successful market promotions based on the collected information

Activities done by team:

- Domain analysis, requirements engineering
- Developed Android/iOS apps
- Developed backend/Web panel
- Developed Business Intelligence dashboards

IOS app : 99% crash free, Android: 97.8%
