About:

Addr Energy is one of the ev charging station management company which managed few ev charging stations

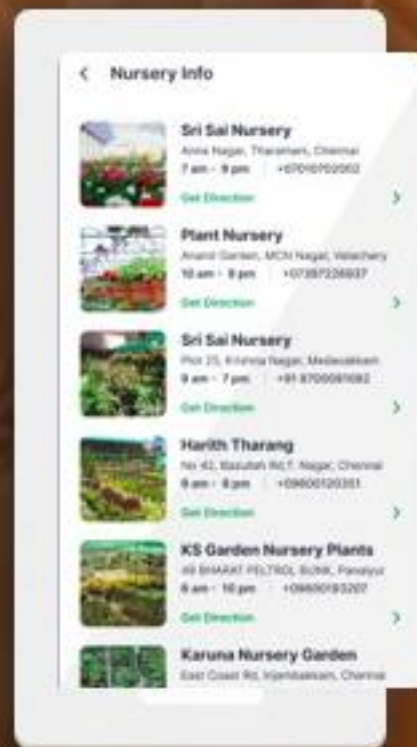

Business Challenges

- Users face difficulties in locating electric vehicle (EV) charging stations, resulting in uncertainty during travel.
- Traditional payment methods for EV charging are cumbersome, leading to delays and user dissatisfaction.
- EV drivers may struggle to find the most efficient route to charging stations, causing unnecessary delays.
- Users lack comprehensive information on charging station availability, types, and charging speeds.

Solutions we offer:

- Develop an interactive map within the mobile app, displaying real-time data on nearby EV charging stations, ensuring users can easily locate and plan their charging stops.
- Integrate a secure wallet functionality, enabling users to make quick and hassle-free payments for charging services directly through the app.
- Implement a navigation feature that not only guides users to the nearest charging station but also considers factors like traffic and optimal routes for a smooth journey.
- Provide detailed information on each charging station, including available connectors, charging speeds, pricing details, and real-time availability, empowering users to make informed decisions.

About:

Senzio brings the luxury and fit of the finest custom tailored and bespoke suits to you – wherever you are in the world. Our approach is tailored to you in every way, from the private, in-person fittings available at trunk shows in key global cities, to individual style advice and attentive customer service.

Business Challenges

- Customers may find limited options for customizing apparel, leading to dissatisfaction and a lack of personalization.
- Manual order processing may result in errors, delays, and an overall inefficient fulfillment process.
- Customers face difficulties visualizing the customized apparel before placing an order, leading to uncertainty.

Solutions we offer:

- Create a user-friendly website with an extensive range of tailoring options, allowing customers to customize aspects such as fabric, fit, and style for a personalized shopping experience.
- Develop an automated system for order processing, minimizing errors, reducing fulfillment times, and enhancing overall operational efficiency.
- Incorporate interactive features such as live chat support, personalized recommendations based on customer preferences, and style guides to actively engage users and enrich their shopping journey.

Patient Monitoring Application

About:

Scriplogix is a research and analytics company seeking to bridge the best of global information technology services with opportunities in the U.S. Life Sciences, Wellness and Healthcare markets. We bring a strong understanding of the healthcare and pharmaceutical domain in the U.S.

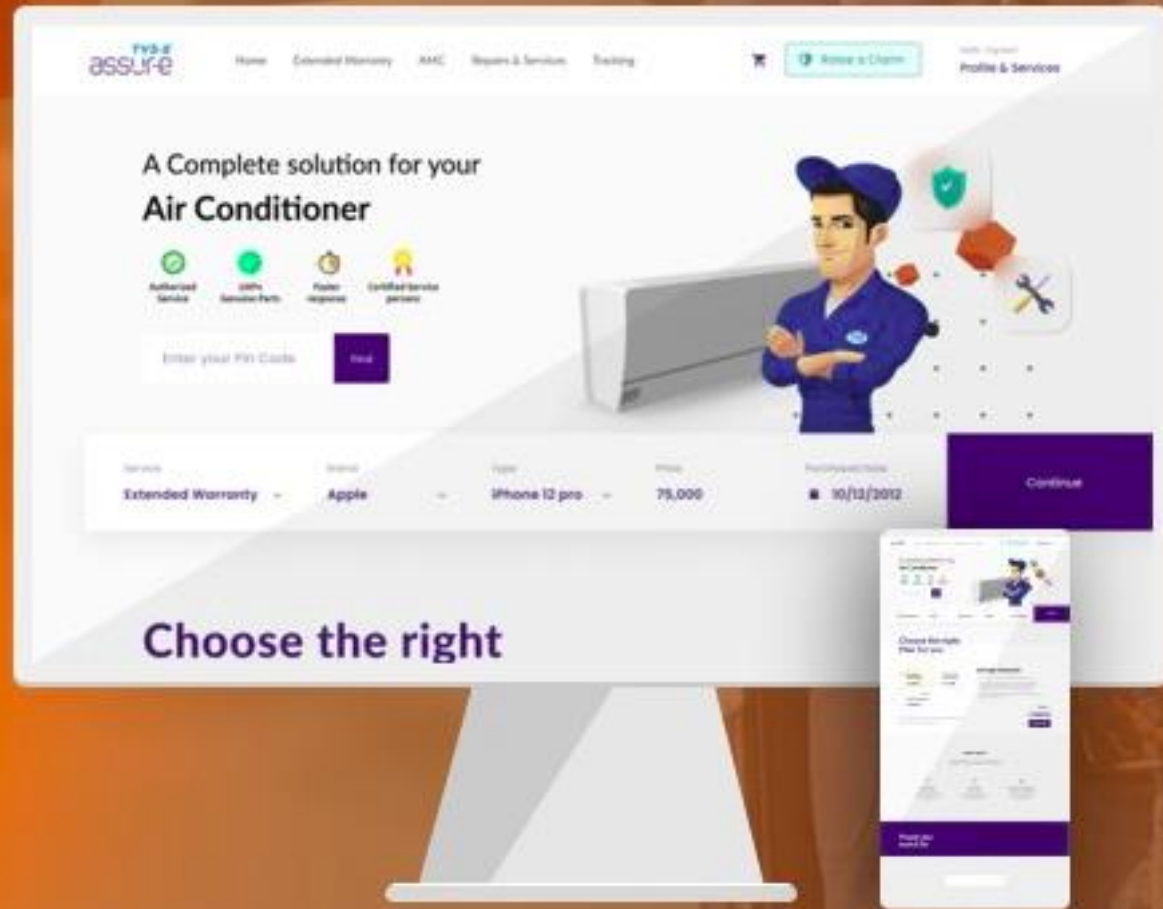

Business Challenges

- The performance of Ionic apps may not be as good as native apps, especially for more complex applications with heavy graphics or animations.
- Ionic apps have limited access to native device features compared to native apps.
- To access certain native device features, Ionic relies on third-party plugins, which may not always be reliable or up-to-date.
- While Ionic provides a good set of pre-built UI components, there may be limitations in customizing the design to meet specific requirements.

Solutions we offer:

- Mobile application using react native framework
- Mobile app security is a critical concern, and solutions such as mobile app management (MAM) and mobile device management (MDM) can help ensure that the app and its data are secure.
- Push notifications: Push notifications can be used to engage users and keep them coming back to the app. Services such as One Signal and Firebase Cloud Messaging provide easy ways to send push notifications to users.
- Data fetch to be handled in a secured way using HTTPS.
- Authentication and authorization to access certain functionalities.

About:

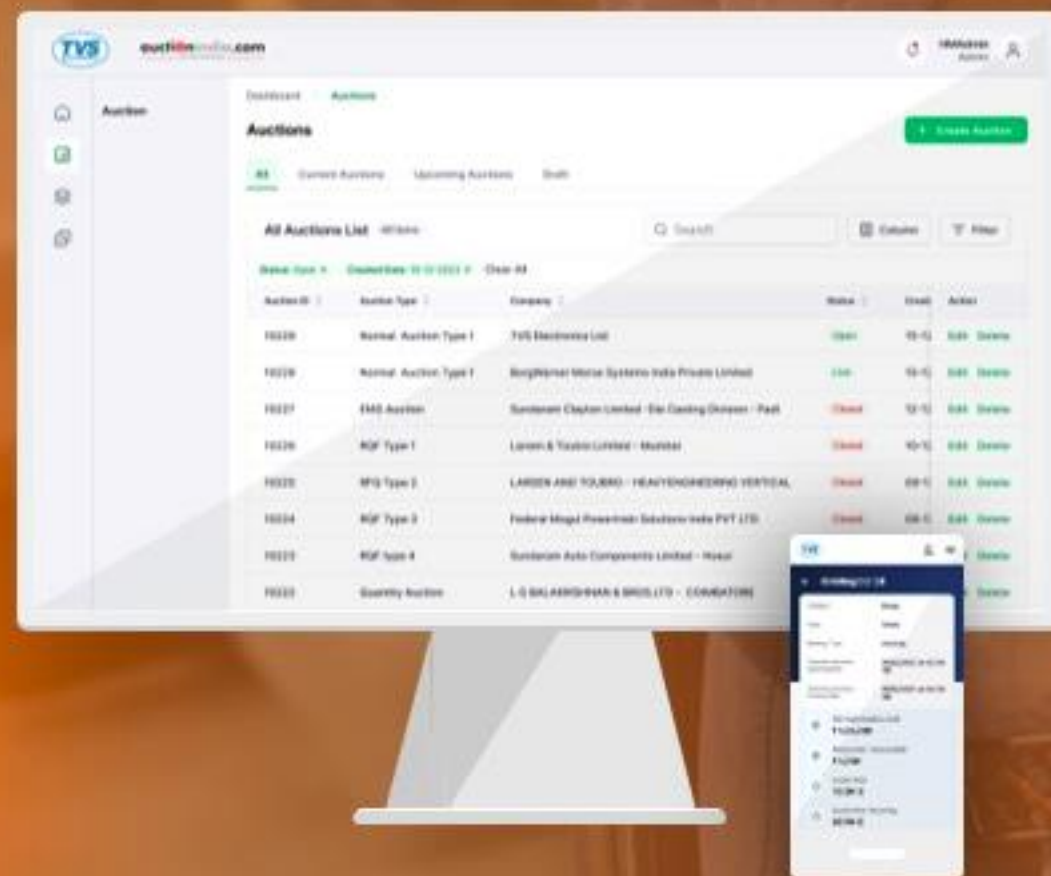

TVS Electronics is an Indian multinational electronics company, headquartered in Chennai. TVS Electronics designs, manufactures and distributes IT products, dot matrix printers, point of sale terminals, printer supplies, keyboards, mobiles, mouse, uninterruptible power supplies, and set top boxes.

Business Challenges

- Companies may struggle to reach a broader audience for their auctions, limiting the visibility of their products.
- Without a dedicated platform, companies may face difficulties in managing and organizing auctions, leading to operational inefficiencies.
- In the absence of a centralized system, companies may lack a standardized bidding process, causing confusion and potential disputes.
- Companies may find it challenging to connect with a diverse pool of potential bidders, limiting the competitiveness of their auctions.

Solutions we offer:

- Companies can leverage the application to create and promote auctions, reaching a broader audience of potential buyers and maximizing market exposure for their products.
- The application provides robust tools for creating, managing, and monitoring auctions, offering a centralized and efficient platform for companies to organize successful auctions.
- Establish a standardized bidding process within the application, promoting transparency, fairness, and a clear framework for all participating companies and bidders.
- The application connects companies with a diverse pool of potential bidders, fostering competitiveness and ensuring a higher likelihood of achieving favorable auction results.

About:

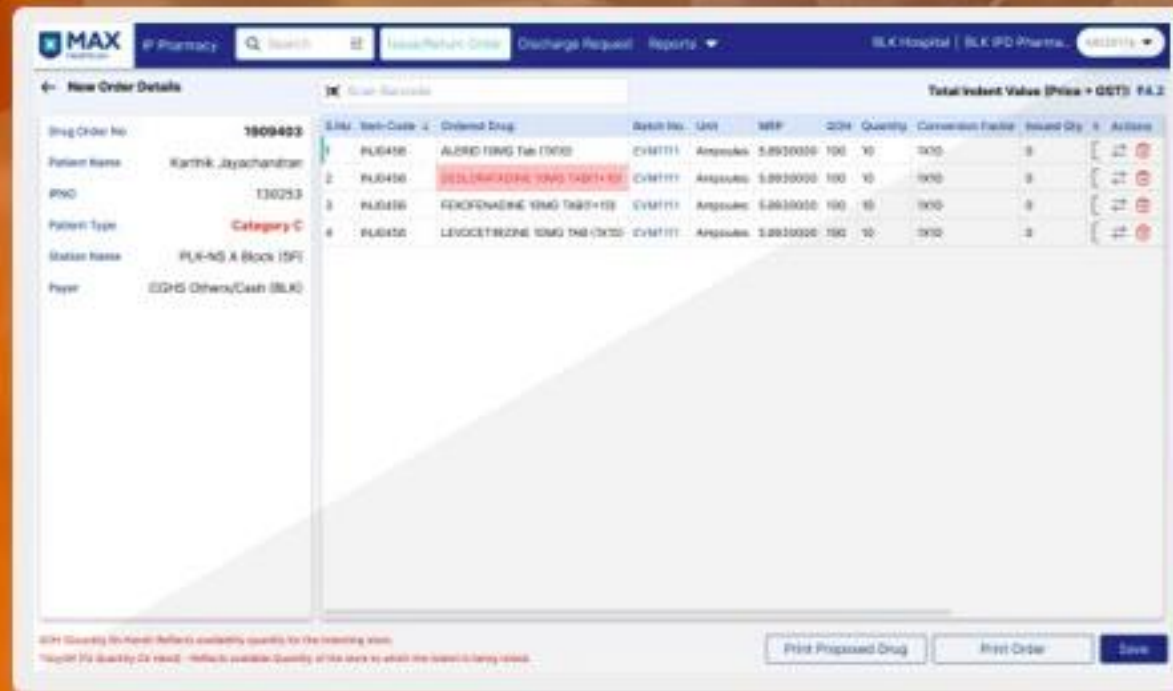

Max Healthcare Institute Limited is an Indian for-profit private hospital chain headquartered in Delhi. Max Healthcare owns and operates 17 hospitals with 3500+ beds and 4800+ clinicians across the Delhi National Capital Region, Mohali, Bathinda, Dehradun and Mumbai.

Business Challenges

- The existing application might be running on outdated technology, making it difficult to support modern features and slowing down the development timeline.
- The previous system may have faced challenges in efficiently managing the availability of beds and drugs for inpatients, potentially leading to delays or errors in patient care.
- Developing a hospital management system from scratch can be time-consuming, leading to extended development timelines and delaying the implementation of critical functionalities.

Solutions we offer:

- The updated application brings the hospital's systems to the latest technology standards, providing a foundation for enhanced performance, scalability, and adaptability to future technological advancements.
- The updated application efficiently manages beds and drugs for inpatients, reducing the risk of errors and delays and improving the overall quality of patient care.
- Leveraging your tool significantly reduces development timelines, allowing for a faster implementation of the updated hospital management system and ensuring a more rapid achievement of success.
