

Elastomers Australia

CASE STUDY

About

Elastomers Australia are an innovative Australian owned company who provide the mining and mineral processing industries with customised screening solutions designed to lower production costs and provide efficiency gains for their customers. With a sizable workforce of close to 200 people, the ability to manage health and safety is of vital importance.

Background

Elastomers Australia went to market having found that their existing solution was incredibly time consuming and lacked the ability to collect and collate information and generate required reports. A solution was sought which could meet the following key criteria;

1. Ease of use and intuitiveness;
2. Transparency in the reporting;
3. Accountability;
4. Event and NCR corrective action management through to close out;
5. Mobile, tablet and web based reporting across multiple operating systems;
6. Scalable to account for future workforce and business requirements;
7. Detailed data and trend analysis to enable effective utilisation of leading indicators;
8. Project managed and delivered against a tight timeline.

The Search

INX Software was selected by Elastomers Australia for its extensive range of workforce and business functionality, integrated nature and flexibility in user configuration to meet the growing and ever changing nature of the organisation and industry as a whole. INX Software is a proven solution that is used by over 250 organisations both in Australia and overseas to manage more than 500,000 people across a range of industries including mining, transport, oil & gas, food & beverage, marine, aviation, communications, utilities, healthcare, and government.

The INX InControl product offers convenience, scale and configurability in managing health, safety, environment and risk. On top of managing standard OHS incidents, injuries and risks, INX InControl also encourages the management of proactive events such as inspections, audits and assessments, all of which can be carried out using the supporting INX InControl Mobile application. As an end-to-end solution, users have the ability to create and submit any event type; manage return to work programs and workers compensation; access procedure libraries; ensure people compliances; and submit and track corrective actions.

The solution works around the organisation's structure to ensure notifications and escalations are pushed to the appropriate people at the appropriate times. INX InControl also integrates with existing systems so that vital information, such as exposure hours from time sheets or people information from HR and payroll systems, can be pulled across and reported on immediately.

The Feedback

"We went to market looking for an alternative to our existing system which was very time consuming and lacked the required functionality. We found our solution through INX Software which not only met our functional requirements but also our implementation requirements given the strict project time frame."
