

Newsletter and Group Email Solution for:

## Send Newsletters

Send personalized mass e-mails to:

- SharePoint List Recipients
- Subscribers List
- Active Directory Users
- Active Directory Security Groups
- Active Directory Distribution Groups
- SharePoint Groups & SharePoint Users
- Contacts in SQL Database via BCS List

**Adjust your Mailing List** by applying exclusion filters according to email domains, single contacts or users in other SharePoint list views.

Choose custom **“From”** and **“Reply to”** e-mail addresses.

Remove **duplicate e-mail addresses** with only one click.

## Subscribe Users

Let your users decide what content they want to receive

Publish the Subscription Web Part in the company website for **lead collection**, or in an intranet page for internal purposes.

## Email Templates

Edit email layout with rich text, a HTML editor, or use an out of the box template

### Reuse Content

Save effort by reusing previously sent jobs to create new newsletters campaigns.

### Send emails with attachments

No workflows, no coding. Drag & drop.

## Mail Merge Data

Customize each email by mail merging data from:

- SharePoint Lists
- SharePoint Groups
- SharePoint Users
- Active Directory Security groups
- Active Directory users
- AD Distribution groups
- Subscribers List
- SQL Server via BCS list

### Generate email body by using SharePoint content

Get content from any other SharePoint list and dynamically deliver user's pertinent data according to conditions.

### Attachment's Mail Merge

Mail merge SharePoint list items or library files of each recipient to its respective email, every contact receiving only its own documents or related files.

Preview the email before sending in the **Preview Tab**

## Analysis & Reports

JungleMail displays results of real-time analysis

### Find out who:

- Opens your newsletters
- Clicks on the links
- Unsubscribes

Load recipients from "E-mail Opens", "Unopened e-mails" or "Link Clicks", and have a second shot at reaching your audience

## Automate Process

### Schedule or Make job recurrent

Send emails in a specific future date and time, or make them recurrent (every day, month, or on the first/last working day).

### Start Workflows

Run a SharePoint Workflow on each SharePoint contact list recipient item for each email being sent.

Send newsletters from your own code by creating an item in the JungleMail's jobs list
