

Flexibility; Automation

2TouchPOS is a flexible system. From how you would like your receipts to appear to how you configure your positions, customer accounts and floor plan you can have the system set up the way you need it to be. When you get 2Touch, you tell us how you conduct business and we configure the system to meet your needs. If you do not have a clear operational format, then let our system processes lead the way!

For example, another way to promote order accuracy is to have clearly defined modifiers. We can have these selections forced or set them up as an optional list. This implements forcing a modifier vs. making them optional.

Another automated process focused on profit monitoring and user interface is when managers void. Mistakes do occur however and when they do the items can be tracked using the void, comp and spill tabs with a manager login. The reason and item are preserved in the 2TouchPOS history and can be reviewed when the reports are run at the end of the shift.

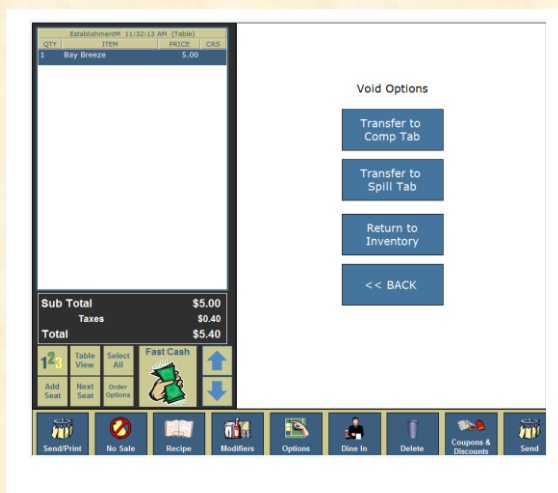

With the 2TouchPOS, you can organize pricing, set up dynamic pricing to edit prices during certain days of the week; you can automate your profits and drive your specials so that you can consistently remain profitable. This is a set

it and forget it feature. Contact us to find out more about our automated options!

Get to know how flexible your Point of Sale Software can really be.
