Working on  
best and most  
reliable  
technologies.

Niche Industry  
with expertise in  
end to end  
process.

# Highlights of CronJ

Highly specialized  
team in the creation,  
usage and deployment  
of NodeJS based  
applications.

DevOps skills  
significantly improve  
the efficiency and  
response time  
required.

Packages along  
with mobile  
application  
development too

# Our Process

## 01 Gather Information

Done through initial discussions, calls and specification shared by the client.

## 02 Estimation Process

Once we have enough information, we put feature list and estimate using feasible study.

## 05 Project Plan

Order of development sprints, length of each sprint and set the milestones set. Detailed project plan is shared with the client.

## 04 Handover to the technical team

Once approved, sales team does the handover to the respective team.

## 03 Discussion

Discussion on Feature list, negotiation of contract, payment terms, delivery, timelines etc for the well execution.

## 06 Start Development & Project Communication

Project Communication and interaction done through daily/weekly calls/meetings

## 07 Milestone Delivery

Each milestone delivery is followed with a demo & walk through with the client.

## 08 Final Stage Testing & Optimization

We do performance testing, Code review based on the reports/indexes.

## 09 AMC Plans

Starts with application monitoring, maintenance and for enhancements.

# Engagement Models

## Hourly based model

For smaller projects

## Resource based hiring model

For long-term projects.

## Fixed bid projects

Requirements with scope is definite & clear.

## Partnership

We are a technological partner for you

# Client Testimonials

"We have worked with Akash on developing a game for our businesses. The project went very smoothly and it was completed by the deadline we were working towards. Being the first and only game we developed, we greatly benefitted from the professional and on time service that Akash and his team provided throughout the project. Very happy with the outcome."

**Krisztian Panczel, MD**  
Cheap Sheds

"CronJ has very likeable developers. It was nice to work with them and in certain parts of the project they really went beyond the call of duty to meet a deadline -working through the night."

**Roderick Ross, CEO,**  
Travellinck

CronJ Team  
has some of the fastest programmers I have seen. They really surprised me with their speed. Beside speed, they successfully programmed features that other couldn't program. Thank you CronJ Team."

**John Mraovic, CEO**  
PentaminoInc

"With respect to full-stack JavaScript development, in particular the MEAN stack, I can safely state that Monuand his team are the best vendor known to me. His strengths are that he runs excellent and hard-working teams and that he gets team members to perform at highest levels (we dropped quite a lot of hard problems on them)."

**Reiner Bruns, CEO,**  
3 scientist's & a nerd
