

## About Solutions

We understand that choosing an ERP system that is right for your business is hard, and one size does not fit all.

To help you find the best ERP for your business, our solutions data sheets provide examples of common VersAccounts Cloud ERP configurations with cost. It is our hope that the majority of our customers will identify one of these configurations as being close to the one they need, thus simplifying the buying process.

## Global Chemical Manufacture

*Prior System: MYOB, Sage 50, QuickBooks Enterprise, and others...*

Owner: James

James runs a global agricultural chemical manufacturing company that manufactures and distributes a variety of products. It has five different subsidiaries that each manufacture and distribute one or more products for their region as well as for global markets.

The company originally ran Sage 50 Quantum US

(Peachtree Accounting) in its US headquarters. On expanding to Canada they deployed Sage 50 Quantum Canada (Simply Accounting). Further expansions caused deployments of other local systems in each country in which a new subsidiary was set up. Besides accounting systems, additional add-ons for manufacturing were deployed, custom software was created, and spreadsheets were used.

This resulted in silos of information at each subsidiary that could not be accessed by other locations. While the company was global, it still operated like a collection of independent smaller entities, and this disconnect threatened their competitiveness.

The arrival of cloud-based solutions caused management to seek a solution that could harvest its benefits. They envisioned a single system that supported all the subsidiaries including:

- Real-time availability of information at any subsidiary at any time from any device
- The ability to leverage the combined size of the company in purchasing contracts
- The ability to coordinate manufacturing across locations
- The ability to fulfill orders from the most convenient location

They also hoped that add-on software packages could be eliminated, as well as custom software and excel spreadsheets. But at the same time they wanted each company to be able to operate as an independent entity, in its own home currency, conforming to its local laws and tax codes, using local languages and documentation (including document formats and wording).

For James, the Power Edition of the VersAccounts Small Business Cloud ERP system, with custom

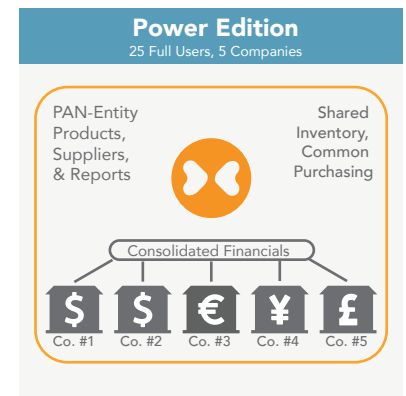

forms and reports for each entity, as well as email, credit card gateway and bank integration, provides the system he needs to continue his expansion to new geographies. The VersAccounts Small Business Cloud ERP system eliminates the silos of information that made decision making very difficult in the past and provides a real-time view of the business upon which better decisions can be made.

## Summary Of Requirements

- Five Companies
  - Different Home Currencies
  - Financial Consolidation
  - Cross Location Inventory Sharing
  - PAN Entity Capabilities
- Enhanced Inventory
  - FIFO & Average Costing
  - Fractional Unit of Measurement
  - Product Specific Conversion Factors
- Production Orders
  - Available/Short Calculation
  - Substitution/Adjustment
  - Waste
  - Labor

## +VersAccounts Solution

- + Power Edition
  - Implementation
  - 5 Full Users
  - 1 Business Entity
- + 20 Additional Full Users
- + 4 Additional Business Entities
- + Email Integration
- + Credit Card Gateway Integration
- + 5 Custom Forms
- + 10 Custom Reports

## USD \$2,914/Month\*
