- 3 -

- (a) In formulating breeding policy two essentials must be kept in mind; first, the necessity for adopting a policy which will meet local requirements, and second the need for continuity in the programme of breeding and the urgency of ensuring that the programme is not prematurely interrupted.
- (b) It is essential that the breeding of high yielding strains should be greatly extended and for this establishment of herd books and of a system of milk record should be proceeded with as soon as possible.
- (c) The relation of management to the maintenance of a sound constitution should be looked upon as one of the major subjects for investigation in connection with the breeding of improved stock.
- (9) The majority of Indian milch cattle are seriously underfed. This is apparent from the slow rate of growth, the late maturity and the long dry period of cattle kept under village conditions.
- (a) If milk production is to be increased, the provisions of a very much larger food supply is essential.
- (b) The fodders of outstanding value are the leguminous crops such as berseem and lucerne. Careful investigation should include a study of the effect of leguminous crops on the subsequent growth of cash and food crops. The conservation of such fodders also requires investigation.
- (c) It is desirable that a suitable system of rationing should be devised for the guidance of milch cattle owners.
- (10) It is strongly recommended that provincial Governments should take the necessary steps to establish an advisory service for the dairy industry. As a first step, it is suggested that a Dairy Development Officer should be appointed in each province. The major duty of such an Officer should be to initiate dairying developments and to take the lead in encouraging the adoption of improved methods. The Dairy Development Officer should work under a Special Committee representative of various branches of Government activity concerned.

Most of the items of Dr. Wright's Report have already been put on the agenda of this Conference and Dr. Wright's suggestions will be considered along with these. Attention is invited to item 10 in which Dr. Wright considers the appointment of Dairy Development Officer as essential. This may be considered by the Conference.
