CHARRY & CO.,
CONSTRUCTIONAL ENGINEERS
AND
CONTRACTORS.

OPP. OLD SMALL CAUSES COURT,
BUNDER ROAD,
KARACHI.

26 JAN

KARACHI, 24 th January 192

To.

The Executive Engineer,

Municipality, Karachi.

Dear Sir,

We are duly in receipt of your favour No.484 of the 21st instant for which we thank you.

While regretting the slow progress of the work at Museum even more than your goodself does, we beg to point out that the value of the work done so far is approximately Rs 65,300/= (To last bill 62,300/=, and work done since about Rs 3,000/= odd =65,300/= odd) as against our total contract of 92,000 odd. We must here, humbly yet emphatically say that the most expensive mass item that take comparitively much less time to execute and carry big values have all been held up either due to your indecision or belated final orders.

Some such major items are:-

Reinforced Concrete Roof.	.. ..	Rs. 8,610	0 0
Cement flooring tiles.	.. ..	.. 7,285	0 00
Doors and Windows shutters			
Total Value	8900		
Less drawn of A/C	2400	.. 6,500	0 0
Dome.	.. ..	.. 2,750	0 0
Plaster.	.. ..	.. 2,090	0 0
	Total.....	27,235	0 0

Some of the walls still remaining incomplete, the roofing cannot be done. Until the roof and dome are completed, cement tile flooring and plaster cannot be taken in hand.

Door and window shutters come only after the plaster.

Thus while the question of walls remains undecided, all the other items are automatically held back. We beg to briefly

N.B
X This does not include amounts paid under requisitions.

KMR.CDD.RbQ.1924-1925.01

63

explain the present actual position in the main as under:-

1. The Right and Left Wings.

With your permission we would take you back to your letter No.6376 of the 25th, and ours of the 26th and 29th September last referring to the wings, to all of which we invite your special attention, and as even to this day you have not issued your final orders, all the work on those sections are completely held up and have remained so for full four months, and surely you cannot lay the blame at our doors if the Municipal machinery is slow to move.

2. The Galleries.

The final sanction of the Managing Committee to the altered designs of the roof slabs and beams, which you have had under communication since the middle of September was communicated to us only as recently as under your favour No. 306 of the 14th instant. and already our centerings and reinforcing steel measuring nearly 2000 Sq Ft. are ready awaiting your inspection before concreting.

The thickness of the slabs and the amount of steel have both been increased (as already mentioned to you) over and above our designs on which we have based our rates; of this however we will represent to you under a special letter, though it becomes inconvenient to go into the question of rates after the work is done.

3. The Central Hall.

No roofing work can be attempted here, until further masonry over the circular lintel is raised, and just under your favour No. 422 of the 20th instant you have communicated your final decision to alter the class of this masonary from Random Rubble to Ashlar and have asked us to quote our rates, about which we will deal in a separate letter.

4. The Porch.

KMR.CDD.RbQ.1924-1925.01

Here was the least scope of any work, and to avoid complete stoppage of all work at a later date we had been lingering on with just the minimum staff. Even that was stopped under your orders on the 23rd December and was resumed after you gave orders on the evening of the 8th inst. when you came round with the Assistant Engineer.

Thus you will no doubt be pleased to realise that if we had lingered on, it was solely with a view to avoid the necessity of a complete closure for sometime and expensive reorganisation later, and certainly not to suit any of our own purpose, under these circumstances we have been adjusting to suit your convenience and rather than be penalised, we humbly maintain that ours is the turn to claim compensation, for having been kept back.

Referring to para 1. of your favour under reply, though the writer was never out of Karachi for anything like two months at any one time, whenever he did go out, there were a qualified Engineer and an experienced Mestry on the job, and the very fact the Mestry Nakar Moosa holds a power of attorney refutes the argument that he was not allowed to do things for himself.

Para 2. Even if the pillar caps had arrived months ago, for reasons quoted above (our para 3), we could not have advanced farther today.

Para 3. As explained above, necessarily we have had to adjust the number of workmen to avoid complete stoppage at a later date.

Para 4. Regarding the concreting the gallery portion, we would respectfully refer you to your letter No. 306 of the 14th instant until which date, though we had with a view to keep the staff engaged, commenced the centering work provisionally, we had not the final sanction of the Managing Committee.

Para 5. Regarding scaffolding we have always readily provided these wherever the work has been in progress, and sound ones at that, as otherwise our workmen themselves could not work in safety having to handle

Heritage KMR.CDD.RbQ.1924-1925.01

handle stones weinghing 800 to 1000 LBs each 30 to 35 ft. above the ground, what we could not agree to was the demand for scaffolding all around the building, work or no work, as is customery in Bombay. May we beg to remind you that you discussed this question with one of the Working Committee members whom you brought round for inspection about the time you stopped the whole work for some days ostensibly on that account, though we have reasons to think otherwise.

Para 6. The delay from 1st to 9th inst. in concreting was to carry out your instruction, given when we were ready to concrete, to assemble the overlapping rods in a particular way, which meant undoing all the stirrups and rods once again, and then rearranging at the inconvenient height. The very fact that we have completed the concreting even while yet our claim for special rate for this class of circular beam not orginally defined so in our tender, is yet undecided and disputed, (vide your letter 237 of the 10th inst.) goes to show our earnestness to get along wherever we have been given the least scope.

Para 7. We have dealt with the porch portion in an earlier para and we will not trouble you here with a reiteration. The reinforced concrete portion in lintels over the columns, has been ready for your inspection since a week, and the moment you pass it we will go ahead and fill it.

In the light of the above explanation we feel sure that you will be pleased to admit that we have been handicapped all along the line, and the we are really the aggrieved party, and in conclusion we trust that the whole situation will be considered with resonableness and sympathy.

Yours faithfully,

Charry & Co.

P.S.

Since writing

Heritage KMR.CDD.RbQ.1924-1925.01

P.S.

Since writing the above we have your favour No.514 of date conveying the resolution of the Managing Committee. From the tone of it as we gather that they are not apprised of the real situation from our stand point, and with a view to present the other side of the shield to them, in however small a degree we may succeed in our purpose, we are simply forwarding a copy of this letter to them with copies and extracts of such of the letters as are herein mentioned for ready reference and shall hold ourselves in readiness to furnish them any further particulars and explanation that they may demand of us either in person or by letter.

Charry & Co.

Re: R.C. Lintels

Dear Sir.

Replying your favour No. 237 of the 10th inst. we beg to say that by a general definition of a lintel it is understood a Straight one, any Special Shape like a circular one being always Specially defined as Such.

We may here remind you that on one of your inspections while the circular centering was being erected, we mentioned to you of our claim for a Special rate for this item & you said that if we could prove that it was going to cost more to put up a circular centering you would consider. This circular would contract the useful more than once. We trust that you will kindly see the reasonableness of our claim

Yours faithfully,
Chanrai & Co.

Messrs Charry & Co.,

Re: Progress of Museum.

You have been several times informed officially & verbally by the Undersigned and also by the Legal Adviser that the progress of the work at the Museum is very slow and that you have exceeded the contract time which ended on 30th of September. Even allowing a liberal time for the extra deep foundations, you have still no completed even 60% of your work.

You should note the following points, which show that you have not attempted to hasten up the progress:-

(1) You remained absent from the work for over 2 months and gave powers of attorney to one Naker Moosa, who was not competent or was not allowed by you to decide things for himself, Vide my letter No.E 4521 of 9th July 1924. You have again remained absent from 12th January to date vide my No.411 of 19th January. There is no responsible man on the job.

(2) For two & half months you were not able to obtain the pillar--caps for the central dome, as admitted by you vide this office No.E 14 of 7th January.

(3) The number of workmen employed from 15th November to date show that there is not sufficient labour(~~vide statement attached.~~)

(4) Centering for re-inforced floor over the rear rooms was complete abount 25th December, but as yet no concreting is done.

(5) You refused to provide scaffolding for a long time & I had to stop your work for not providing access for inspection of work on high level & still I find that except for one good ladder there is no other safe access for the work done on top.(vide my letter dated 15th November & 26th December)

(6) The circular beam underneath the dome was declared by you complete for concreting on or about 28th December and ins--pected by me on 1st January and concreting was not begun till 9th January.

(7) Work on the front porch is hanging on for want of dressed stones and re-inforcements for the last two months.

Please note that I am forced to take action under paragraph 5 of general conditions of the contract.

U.C.P.

Executive Engineer,
Karachi Municipality.

To,

Dipchand Chandumal.,Esq.,

Acting Legal Advisor,

Karachi Municipality,

K a r a c h i.

Sir,

Reference to your letter No.E/11 of 19th November 1924, I have the honour to inform you that the Contractors may please be informed as given below:-

To,

Messrs. Charry & Coy.,
K a r a c h i.

Dear Sirs,

You are referred to this office No.E/4521 of 9th July 1924, where you have been asked to construct 20 feet of walling in the extensions and under No.E/6617 of 6th October 1924 you were informed in reply to your letter that the question of cross-walls was decided long ago, when orders to construct 20 feet walls of extensions was given under No.4521 of 9th July 1924.

You are also referred to No.E/3018 of 11th May 1924,where you were informed that all the information in connection with the work has been supplied to you and thus delay avoided in the execu-tion of the work. This you have not contradicted

You were also been informed verbally, which is admitted by you in your letter under reply in para 3. The fact that the side-wings are to be extended means, as you know that the cross--walls are not to be built, which fact was made known to you several times on the work.

You were informed on various occasions regarding delay on your works, vide telegrams sent to you in July and also letter No.E/7732 of 14th November 1924.

You also admitted that the work was delayed for over two months on account of want of stones for capitals and rings of the columns as stated by you to the Executive Engineer. The Managing Committee have also under Resolution No.209 of 22nd November 1924 expedited you. In face of all this, it is too much for you to say that the Executive Engineer is forestalling your claims for delay.

You are therefore informed that you should note that the conditions of the contract in all respects will be adhered to and ~~that it is in your interest to push on with the work.~~ that the contin

of daily charge of Rs 25/- will be enforced

Yours faithfully,
etc., etc., etc.

I have the honour to be,
Sir,
Your most obedient servant,

Executive Engineer.,
Karachi Municipality.

Dear Sir,

Your letter No. E 9/24 dated the 3rd instant addressed to our clients Messrs: Charry & Co, has been placed by them in our hands with instructions to state that it is really amusing to see your clients putting in a claim of compensation of Rs: 25/- a day, when even till this day , they have not finally decided as to the final orders with respect to the contract in connection with the Museum Building . Our clients have reason to believe that the notice under reply has been sent with a view to evade the liability of the claim of our clients on account of the delay on the part of your clients in finally deciding whether they like to stick to the contract plan or have any alteration therein. . . .. In fact your clients have forestalled our clients in sending the notice.

Your clients have invited tenders in connection with the extention of the Eastern and Western sides and have in fact not made up their minds yet, whether to extend or not. Our clients have been anxious to have the question of Cross Walls determined in order to enable them to make progress in the work.

Our clients have been told not to begin the Cross

KARACHI MUNICIPALITY.

———:o:———

Specification of various works connected with the erection of New Museum Building.

Setting out—The site of the building will be marked out for the Contractor by the Assistant-Engineer or such other persons as may be deputed by the Municipal Engineer for the work. The necessary levels will also be given. The Contractor must, however, provide the necessary labour and material for marking out the ground,

Item No. 1 Excavation—Trenches for foundation are to be dug to the depth and of the width shown on th drawings or deeper and wider, if found necessary, in order to obtain a hard firm bottom. No building is to be commenced until the foundation has been approved of by the Municipal Engineer The earth from the excavation is to be used in filling in, but will only be paid for as excavation. No material excavated from foundation trenches of whatever kind it may be, is to be placed nearer than 4 feet from the outer edges of the excavation. The price quoted must include excavation under sub-soil levels and cost of pumping necessary in order to keep the trenches free from water during excavation.

Item No. 2 Cement Concrete in foundation—The concrete for foundation shall be composed of hard broken stone, sharp sand and Portland cement in the following proportion *viz* 6 of stone broken to 1½" gauge 3 of sand and 1 of Portland cement. The sand and cement will be guaged and well mixed dry on a clean boarded floor, the gravel or broken stone shall then be added and the whole mass turned over three times at least so as to ensure a proper mixture of materials before water is added from the rose of watering cans in sufficient quantity to thoroughly saturate it. The materials shall be again turned over three times at least to mix thoroughly together or they shall be mixed in a proper concrete mixing machine. The concrete must be deposited as quickly as possible after mixing in its intended position in the works in layers of 12" depth well punned with an iron headed rammer of approved form and weight so as to thoroughly consolidate it. All pieces of stone that become separated from the aggregate when it is placed in the work shall be removed. The whole of the concrete must be so worked and placed in *situ* as to become one solid mass and free from honey comb. If the concrete after having been put into the works be left exposed, and become hard, dry, unsound or dirty, or has been deposited for 10 hours before another layer is added, it shall be cleaned off or washed down as may be necessary, and be covered with a thin layer of cement mortar before another course of concrete is added.

Item No, 3. Random Rubble in Foundation—The foundation is to be laid of such ordinary thickness as may be required, and is to consist of large flat

86-4
Heritage KMR.CDD.RbQ.1924-1925.01

bedded stones laid in cement mortar (5—1.) The stone to be the largest workable size, set with their broadest and truest bed downwards. All irregularities on the larger stones to be levelled up with smaller stones on the top bed only, and the whole must be thoroughly grouted with cement mortar. The whole stone to be used on this work must be the best from an approved quarry free from stains or blemishes.

Item No. 4 Cement Concrete Block Masonry in plinth—The blocks to be composed of 1 Part Cement 2 part sand and 4 part Gravel set in Cement mortar 1-5 with joints neatly finished off The blocks to be not less than 9" inch thickness 15" inch breadth Each course to break joint and. headers shall be inserted at distances not more than 4 ft. apart in each course, The top course, of plinth shall be 6" in height with 1½" projection from outside with a bevelled edge at 45°. The stones in this course will be all headers.

The blocks shall be wetted in a covered place for 10 days before being used on the work. Brand of Cement to be used in the work shall be approved by the Engineer.

Item No. 5 Animar in Wall.—The super-structure masonry is to be o animar and will be measured the full projection plus whole thickness of the wall and must be of best stone from Gizri Hill Quarry, free from stains or blemishes, and finely and truely dressed with a chisel on the face and dressed on all beds and joints to the dimensions given by the Engineer, or as shown on the planf The stone to be fine dressed on the face and joints and rough tooled on beds, full, true and out of winding. The joints to be true and close and not to exceed ¼" all visible edges and angles to be quite free from unsightly chipping No stone to be less in any dimension then its height. All arches to be carefully turned on centres of the proper radii, and all arch stones to radiate to the proper arch centre. The whole work to be set in lime mortar (1-3) and pointed with cement mortar (1—3.)

Item No 6 Random Rubble in walls.—The stones to be used in the work as received from the quarry and without further dressing of any sort than that of knocking weak corners and edges with the masons hammer. The stone shall be carefully laid in courses not less than 8" deep so as to break joint as much as possible and to be solidly bedded with close joint. No joints shall exceed half an inch in thickness No dry work or hollow spaces shall be allowed in the masonry any-where, small stones used in the filling being carefully selected to fit roughly the interstices between the larger ones. All walls to have headers not more than 4 feet a part centre to centre to go right through the walls. The walls are to be levelled every 18 inches in height, and to be carefully pointed both sides. The work to be set in lime mortar (1—4) ~~and pointed with cement mortar (1 cement and 3 sand.)~~

Item No. 7 Damp proof course—The damp proof course shall be of 2 ply malthoid laid in compound in accordance with the specification issued by the makers. It will be laid at a level of about one foot above ground or as directed by the Engineer on a bed of ¾" cement plaster.

Heritage KMR.CDD.RbQ.1924-1925.01

Item No. 8, Filling in— The remaining filling in will have to be, brought from approved sites, or wherever the contractor may be able to find it and will be paid for according to the Schedule rate. All filling in must be done at once and properly rammed after the walls from foundation to ground level are finished.

Item No. 9 Cement Tiles flooring.—The flooring of the Museum will be of cement tiles 8"×8" of an approved shade and colour set in cement mortar 1-3 over 6" broken stone. The samples to be submitted to the Engineer for approval one month before they are used on work.

Item No. 10 Rajkote stone fine dressed in steps laid in cement morter — The stone shall be of an approved quarry of Rajkote of black colour and shall be finely and truely dressed on all faces and joints chisel dressed on beds, set in cement mortar 1-3. The joints to be true and close and not to exceed $\frac{1}{4}$" all angles be quite free from unsightly chippings. The stone to be as long as procurable in reasonable sizes. The measurement will be given of the actual quantity of the stone used in the steps and the filling in which will be of R. R. masonery will be paid according to the tendered rate.

Item No. 11 doors and windows.—The prices of the doors and windows of every description must include all necessary posts, frames, locks, bolts, hinges, fastenings, expanded metal, copper netting, and furniture required to make them in every way complete and effective. The articles must be of best quality and pattern of their respective kinds, and according to the detail drawings to be supplied and they must be submitted for approval of the Municipal Engineer before being used. The doors and windows to be of pucka teak. All the outside doors to be framed 2 inch and panelled as shown on the plan. The door-posts to be of pucka teak, 6 inches by $4\frac{1}{2}$ inches. The doors to be hinged each with three 6 inches brass hinges, fitted with brass rim lock, 3 feet special bolts &c., on top and 9 inches brass bolts at bottom as may be required. The windows are to be of pucka teak, framed $1\frac{1}{2}$ inches thick and each hung, with 4 inches brass hinges and fitted with brass bolts as may be required. All doors and windows to receive three good coats of the best Copal varnish or paint as may be directed, the cost of which is to be included in the rate for the doors and windows respectively.

Item No 12, Venetian windows.—The windows will be provided with P. teak Venetian shutters from outside, complete with brass furniture etc, as specified above. The rate to include 3 coats of varnish or oil-paint of an approved colour.

Item No. 13.—Hubb stones fine dressed column, set in cement as per details. All columns will be Hubb stones of an approved quarry, set in cement mortar 1-3 in large lengths as procureable, finely and truly dressed to the detailed sections supplied by the Engineer. The joints to be true and close and not to exceed $\frac{1}{8}$ inches and shall be free from unsightly chippings The measurements will be given of the actual section of the columns in the work.

Item No. 14.—Base and capital of columns in Hubb stones fine dressed set in cement.—The Bases and capitals of the columns shall be in Hubb

86-6

Heritage KMR.CDD.RbQ.1924-1925.01

stones in one thickness each, cut and dressed to the section supplied by the Engineer. The specification shall be similar to Item No. 14 in all other respects and price shall be paid per unit.

Item No. 15 *Main Cornices in Hubb Stones.*—The cornices shall be finely dressed to the section shown on the plans. No stones shall be less than 3 feet long or less than the full width shown on plan.

Item No. 16 *R. C. Concrete Beams, Moulded Lintles.*—The Beams and Lintels shall be in re-inforced concrete and shall be measured in cubic feet in actual work. The concrete will be mixed in the proportion of 1 of cement to 2 of sand and 4 of gravel not exceeding ¾" guage and as specified in Item No. 2. The price to include all reinforcement and centering and finishing of the surface neatly in cement mortar 1:2 to the details supplied by the Engineer.

Item No 17 *Reinforced Concrete Dome 30 feet inside diameter including Hubb stone fine dressed finial complete.*—The central Hall of the museum will be provided with a Reinforced Concrete Hemispherical Dome. The price to include all reinforcement staging centering, etc., including finishing off the surfaces perfectly smooth. The contractor will be required to submit the calculation of Dome including the details of reinforcement etc., for the approval of the Executive Engineer. The rate to include the Hubb stone fine dressed finial to the details supplied by the Excution Engineer.

Item No. 18 *Reinforced Concrete pre-cast segmental arched roofing including beams, josts, filling in haunches and malthoid covering complete.*—

The roofing of the museum will be of reinforced concrete pre-cast segmental arched blocks 4 feet in thickness set in cement mortar 1-4 and laid on Reinforced Concrete subsidiary beams supported by main beams. The ends of the blocks and the top surface of beams will be made sloping so as to radiate truly towards the centre of the curvature of the blocks. The blocks will be made of cement concrete mixed in the proportion of one of cement, two of sand and four of aggregate. The sand and aggregate shall comply with the specification already given for concrete in foundation with the exception that no stone in the aggregate in the reinforced concrete work shall exceed ¾ inches in diameter in any direction. The mixing and laying shall be as already described. The inner surface of the blocks and sides of the beams shall be finished with fine mortar of one cement to two of sand. The reinforcement for the beams shall be of best mild steel complying with the British Standard Specification having an elastic limit of 16 to 18 tons per square inch. The segmental blocks shall be suitably reinforced with expanded metal or in some other method to be approved by the Engineer. The contractor will be required to submit calculations and details of reinforcement for the beams for the approval of the Enagineer.

The rate to include filling in haunches with cement concrete 1-3-6 and laying malthoid 2 ply in thickness asdescribed by the makers.

Heritage KMR.CDD.RbQ.1924-1925.01

Item No 19, *Re-inforced Concrete Slab Roofing*.—The roof of the rest of the rooms will be in re-inforced concrete slab, details and calculations of which will be supplied by the contractor. The proportion of cement concrete will be 1: 2: 4, and the reinforcement will be of best mild steel bars to comply with the British Standard Specification, The price to include centering etc, and finishing off surfaces perfectly smooth with Cement mortar (1—2)

Note :—The entire work of R. C. concrete mentioned in the above items shall be carried on by a firm specialists who have had wide experience in the execution of this type of works and the name of which shall be stated in the tender form. Only the firms of repute will be permited to carry out the above works The contractor will also required to guarantee the whole of the reinforced concrete works to withstand such tests as may be ordered by the Engineer and no payment will be made for reinforced concrete work until such tests have been carried out. All reinforced concrete work is to be finished off perfectly smooth and free from the smallest holes without any extra payment for plastering

Item No. 20, Chunam Plaster with 3 coats of distemper.—The interna walls of the building to be plastered half an inch thick and to receive three good coat of distemper wash colour approved by the Engineer. The plaster should be composed of lime-paste one part, sand two parts, hair or chopped hemp one-sixth part (by volume). It should be slacked with a moderate quantity of water, afterwards diluted to the consistency of cream by mixture of thin jaggery and water of the proper proportions the mass then allowed to harden by evaporation to the required consistency for working. The price to include 3 coats of distemper of an approved color.

General Conditions.

The whole of the work herein mentioned must be executed to the satisfaction of the Municipal Engineer, who shall have power to cause to be removed any materials or cause to be pulled down any work that may not be in his opinion satisfactory.

Alter Plan.—The Municipal Engineer has the power to alter the plan and specification for this work at any time and in such manner as he may think necessary, whether such alteration increases or reduces the quantity of work to be performed and if the work is reduced in quantity, the Contractor shall have no claim on the Municipality for the reduction made, and if the work is increased in quantity the Contractor shall be paid for such increases at his tender rate.

Date of completion.—The Contractor shall be bound to complete the entire work within 9 months from the date of acceptance of his tender for the same, or pay a fine of Rs. 25 per day for every extra day until all the work be finished. On the completion of the work, he shall inform the Municipal Engineer who will examine the whole work, and if found satisfactory, his term of maintenance (being 6 months) shall commence, during which time the building shall be kept in thorough repair by him (the Contractor.)

86-8
Heritage KMR.CDD.RbQ.1924-1925.01

Payments :—The Contractor shall be entitled to payment monthly on account ot the works at the rate of 90 per cent. of value of the work actually executed as certified by the Engineer ; a further 5 per cent. when the works are certified by the Engineer to be completed, and the balance of 5 per cent. will be paid at the expiration of the term of maintenance provided that the work have been delivered up to the Municipality, and shall have been certified by the Engineer to be completed according to the true inten, and meaning of this specification.

Power to end contract :—If the work shall not progress to satisfaction of the Municipal Engineer, either as regards progress, workmanship or materials the Municipal Engineer is hereby authorized to take the work out of the Contractor's hand carry on the same departmentally or re-let the contract to another persons. The loss to be sustained by the first contractor whose work or rate of progress was considered unSatisfactory.

Contractor to enter into agreement :—The party whose tender is accepted must enter into a stamped agremeent with the Municipal Engineer for the due fulfilment of the several terms of this specifioation. The cost of such stamped agreement to be borne by the aforesaid Contractor.

The Contractor shall not on any pretence whatever sublet or assign contract or any portion of it to another party without the permission of the Municipal Engineer in writing. On the completion of the work, the contractor shall clear away all rubbish and trim up the groud as may be directed.

The Contractor will have to give two personal securities to the amount of Rs. 1000 for the due fulfilment of the contract, and deposit a sum of Rs. 250 cash.

To,

The Legal Advisor.,

Karachi Municipality,

K a r a c h i.

Sir,

I have the honour to send herewith a copy of the tender, giving details of the contract etc.,entered into with the Contractor. (Memo change Rpt)

Clause "Power to end contract", page 6 of General Conditions lays down the procedure to be adopted when the work does not progress satisfactorily.

The work was lined out on 31st December 1923 and the period of the contract is 9 months. The work turned out upto the end of Aug--ust was 58% of the contract.

The contract period expired on 30th September, but the Con--tractors are entitled to an extension period, as they had to work deeper founds than what they had contracted for.

I suggest that a general notice be served asking the Contrac--tors reasons why they should not be penalized, as per clause 3 of the agreement under General Condtions.

I have the honour to be,

Sir,

Your most obedient servant,

Executive Engineer.,
6/10/24 Karachi Municipality.

Dated, 12th September 1924.

REFERENCE No. E. 6038 of 1924

To,
Managing Committee.

Undersigned has the hon our to report that the Contractor for the Museum Messrs. Charry & Co., have slackened the progress of the work during the last month and a half. Mr. Charry who has been called away to Bombay for a Law suit has been absent from works over two months on two occasions and his agent and part-ner has not shown any zeal to push on with the work. Several warn-ings have been given to the Contractor. His contract ~~extends~~ is for 9 months commencing from 31st December 1923 and allowing for certain unavoidable delays, such as time lost in excavating deeper foundations and pumping out water and delay in deciding the exten-sions, the work should be completed by end of January 1925. So far the quantity of work has been 58% of the total and it is unlikely that work will be completed by that time.

Undersigned recommends that the Contractor may be given a warning by the Managing Committee.

14/18

Executive Engineer.,
Karachi Municipality.

Messrs Charry & Co.,

Re: Progress of Museum.

You have been several times informed officially & verbally by the Undersigned and also by the Legal Adviser that the progress of the work at the Museum is very slow and that you have exceeded the contract time which ended on 30th of September. Even allowing a liberal time for the extra deep foundations, you have still no completed even 60% of your work.

You should note the following points, which show that you have not attempted to hasten up the progress:-

(1) You remained absent from the work for over 2 months and gave powers of attorney to one Naker Moosa, who was not competent or was not allowed by you to decide things for himself, Vide my letter No.E 4521 of 9th July 1924. You have again remained absent from 12th January to date vide my No.411 of 19th January. There is no responsible man on the job.

(2) For two & half months you were not able to obtain the pillar--caps for the central dome, as admitted by you vide this office No.E 14 of 7th January.

(3) The number of workmen employed from 15th November to date show that there is not sufficient labour(vide statement attached.)

(4) Centering for re-inforced floor over the rear rooms was complete abount 25th December, but as yet no concreting is done.

(5) You refused to provide scaffolding for a long time & I had to stop your work for not providing access for inspection of work on high level & still I find that except for one good ladder there is no other safe access for the work done on top.(vide my letter dated 15th November & 26th December)

(6) The circular beam underneath the dome was declared by you complete for concreting on or about 28th December and ins--pected by me on 1st January and concreting was not begun till 9th January.

(7) Work on the front porch is hanging on for want of dressed stones and re-inforcements for the last two months.

Please note that I am forced to take action under paragraph 8 of general conditions of the contract.

U.C.P.

Executive Engineer,
Karachi Municipality.

M e m o:-

The accompanying Blue Print herewith sent to Messrs. Charry & Coy.,for guidance.

They are informed that Ashlar Fine Dressed Masonry is to be used from top of Circular Lintel to roof level with Circular Dishes asper design instead of Randum Rubble in the Central Dome.

Similarly fine dressed masonry on both the sides is to be used in place of Animar dressed on one side and plaster inside from roof level to main cornice of base.

Would you please quote your rates for the following before starting the work:-

1. Fine dressed masonry in Ghizree Stones with pannelling on both the sides(from top of Circular lintel to roof level). per 100 Cft.
2. Fine dressed ashler masonry dishes. per No.
3. Animar masonry dressed on both the sides, (Roof to top of Cornice). per 100 Cft.

Executive Engineer.,
Karachi Municipality.

Messrs. Charry & Co.,
K a r a c h i.

Gentlemen,

Please note that Mr. Charry has remained absent from the works since Monday the 12th January 1925. The work therefore suffers on account of want of a responsible man on the job.

Yours faithfully,

19/1/25
Executive Engineer.,
Karachi Municipality.

REFERENCE No. E. 7343 of 1924.

Managing Committee.

Undersigned forwards the accompanying recommendation of the Works Committee to the Managing Committee with regard to the altered type of roof on the Museum.

It will be seen from the report, that a stronger & economical form of Reinforced Concrete roof is arrived at and as this flat slab construction is already specified for the extensions, pre-cast type of slabs are changed to "in situ" construction to obtain uniformity.

No extra cost is involved as the Contractor has shown his wil-lingness to work at the same rate as the pre-cast slabs. Sanction is requested to proceed with the work.

Executive Engineer.,
Karachi Municipality.

For Me,

REFERENCE No. E. 6968 of 1924.

Works Committee.

M e m o:-

The galleries comprised in the extension of the Museum are to be covered with reinforced concrete beams and slabs over the same all formed in-situ (Vide sketch A.).

2. The first portion of such galleries which forms the wings to the central domed area and comprised in the original contract is arranged to be covered with reinforced concrete beams and precast segmental arches as covers (Vide sketch B.).

3. It would be preferable that the whole of the galleries including the portion now proposed to be undertaken and the short wings in the existing contract should be of the same roof construction.

Not only is this desirable on account of making the roof of the gallery throughout uniform, but as I show on the attached schedule the in-situ concrete roof covering is preferable to the ~~present~~ precast segmental covering.

The area involved is 4322 Square feet.
The cost of the present segmental type will be Rs. 5,375/-.
The cost of in-situ flat type will be ..... " 6,188/-

I therefore recommend that the segmental covering in the wings be replaced with the flat covering as for the remainder of the gallery.

Executive Engineer.,
Karachi Municipality.

Heritage KMR.CDD.RbQ.1924-1925.01

Note on the roof on the central portion of the Museum.

1. According to the specification in the contract, the roof in the central portion underneath the dome is to be of plain re-inforced concrete slab with beams, without any waterproofing cover.

2. Roof over the side wings however is described as "precast segmental arched roofing 4" in thickness" placed over subsidiary beams which rest over main beams 32' feet long. This roofing is to be covered with Malthoid. These precast blocks are to be 5 feet long and about 2 to 3 feet wide. The arrangement would be as per isometric sketch ~~attached~~ below.

3. My experience is that in re-inforced concrete precast units, (parti-cularly in a roof) are a source of weakness, because the construction is not made monolithic, and every joint in the precast slabs is a source through which water is likely to leak. Besides hauling up of each block, which will weigh from 500 to 700 lbs according to the width, will produce stresses in the slab not allowed for.

4. But one of the principal objections is due to the long span of the main beam which is 32 feet centre to centre of the columns. In re-inforced concrete structures, it is very economical to stress steel & concrete to their safe limits of stress Viz., 16,000 lbs and 600 lbs per square inch respectively.

5. Taking these stresses to develope simultaneously, the economic de-pth for the main beam is calculated to be 47". Width of the beam assumed is ~~xxxxxx~~ to be 24". ~~Calculations are attached overleaf~~. The rea-son why such a heavy size of beam is required is, that the strength that a ~~xxxxxxx~~ continuous slab gives in a T beam is lost in this case, as the precast slabs are not continuous. This size of beam would appear out of place with the interior proportions of the Museum.

6. If however stresses in steel & concrete were not to be developed to their safe limits, it is possible to reduce the depth of the beam by providing re-inforcements at the top of the beam. Such a beam is cal-culated (vide sheets over leaf) and the size is given to be 27" x 16". But the great drawback in this beam is that concrete in compres-sion is stressed beyond its limits and it is as a rule not advisable to stress the concrete to its breaking point, as it will produce cracks.

7.

Heritage KMR.CDD.RbQ.1924-1925.01

7. I am therefore strongly of opinion that the roof in the wings should be changed to plain slab construction with beams & water -proofing on top.

8. This will be in uniformity with the roof in the extensions, which is specified as of plain R.C.Slabs with beams. There should not be two kinds roof in the same wing. I have designed such a beam which will be of size 24½" x 16" or 28" x 13".(Vide sub-section)

9. Going into the question of costs, I find that the present Contrac -tor is to get Rs.80/- per 100 Sq.feet.of plain slab roof without beams. The beams are to be paid at Re.1/2- per Cft. For the pre- -cast segmental roof, he is to get Rs.129/-per 100 Sq.feet inclu - -sive of all beams and waterproof cover.

If the Contractors were asked to do the plain slab roof in the wings at their rate of Rs.80/-per 100 Sq.ft. and pay extra for beams & waterproof cover, the rate works out as follows:-

For one bay of 60' x 11'

Slabs	660 Sq.ft. @ Rs.80/-	=	Rs. 528 - 0 - 0
Beam	24½" x 16" x 60' @ Re.1/2- per Cft.	"	184 - 0 - 0
Malthoid Covering	660 Sft.	"	231 - 0 - 0
	Rupees.		943 - 0 - 0

Compared with this, if the Contractor did this portion at Rs.129/-per 100 Sft.including waterproofing, the cost works out to Rs.851/-. Therefore I recommend that the Contractor be asked to do the roof in plain R.C.Slab & Beam with Malthoid covering at Rs.129/-per 100 Sqft. This rate will apply to central portion also.

Municipal Office,
Karachi,
Dated, 17th October 1924.

Executive Engineer.,
Karachi Municipality.

Heritage KMR.CDD.RbO.1924-1925.01

Museum Building.

(1) Area of roof to be covered with precast slab with beams & Malthoid & Floatine.

Galleries area 4322 Sft. @ 129/- per % - Rs. 5,575

(2) Area of the same roof with plain R.C.Slab, beams & Malthiod & Floatine.

Plain slab 80/-per % Sft.
Beams. 1/2- " 1 Cft. = Rs.143/-per % Sft.
Malthoid & floatine.35/-%Sft.

These are the tendered rates of the Contractors.

This is the current rate prevailing.

Area 4322 Sft @ 143/-per % = Rs. 6180

Difference Rs.- 605

Subject R.C. Lintels in Museum

Sir,

While thanking you for your favour No 8306 of 6.12.1924, we beg to say that while our tendered rate is 1/2/- per C.ft of purely Straight R.C Lintels, We had never tendered either for a Combined stone & Concrete lintel or for any Circular lintel with double reinforcement referred to in our letter of 22nd Novr 1924. If there has been any mistake we may assure you that it has not been on our side. The Combined lintel had mostly been Completed before receipt of your favour under reference.

A/c Rebate to those lintels which are in the curved portion of the verandah

51
