UC Browser (formerly known as UCWEB) is a web and WAP browser with high speed and consistent performance. It supports video player, website navigation, internet search, download, personal data management and other features. Functions. New in this issue: Watching Youtube is being supported on more phone models. - The problem of automatically logging into some websites has been solved. - Smaller size for a higher start-up speed. - Touchscreen phone models can now view uploaded photos. - An Indian customer service hotline is now available. What's new at 9.3.0: Now more Mini - Even less set package viewing solutions much smoother. - Image Viewing - You can now view images on web pages one by one using a user-friendly interface. - Increased stability - Download list and reintegration issues have been resolved. What's new in beta is 9.2.0/9.2.0: Smaller size - The installation package is now even smaller, making it much smoother to use. - Night Mode Optimized - Night Mode function has been improved to take better care of your eyes. - Search for hot words - Find all the latest search trends in bar search. - Password Saving - Keeping passwords on HTTPS web pages is now supported. What's new in 9.1.0: Bitmap Font: Using the unique Bitmap font you can now enjoy reading pages in Arabic, Persian, Urdu and Hindi, even if your phone doesn't support those languages. - Support for large languages: Bengali is currently supported. - eMule and FTP download support: You can now download files to UDisk via eMule and FTP using Cloud Download. - Error fixes: The browser will no longer be unexpectedly reset by default. What's new in 9.0.0: Fast video and audio playback: We've developed a quick video and audio playback feature to break through storage restrictions and poor network connectivity. The new feature allows users to play video files that have been stored in UDisk directly, without having to upload these large files to the phone's local store. Enjoy a quick preview of the video on Java Phone. - Keeping your account information: To make logging into your favorite web pages more convenient, we've added the ability to save usernames and passwords on multiple websites such as Facebook and Gmail. - Improved user interface: We've provided our user interface with a makeover, optimizing the design to improve the user experience. Optimized menus, night mode, touchscreen phones and more. - Error Fixes: The stability of this version has been increased and there have been many bug fixes, such as solving the missing Speed Dial problem. What's new in beta 8.9.0/ 9.0 beta 2: Added the function of bitmap font and fixed a lot of problems in the previous beta. What's New at 8.9.0: Incognito View: For Your Convenience and when you activate Incognito View your browsing history will not be recorded while it is active. - Improved Bar Search: Finding a bar is now better than ever, with search engine tabs and a drop down menu offering earlier search terms as you enter your query into the search box. It's This. You quickly switch between different search engines for different content, both between YouTube and IMDB, and get more up-to-date search suggestions. - Select and copy: The Choice and Copy feature has been improved to see how many characters you choose in real time. This can help with sharing content where character restrictions are a problem, such as on Twitter and when sending an SMS. - Optimized text typing: the best support for typing non-English text and typing through Java phones using WERTI and virtual keyboards. Fixed bugs: The Next button doesn't give an answer when used to find on a page on touch phones. - I can't save the painting in some cases. - Some websites may not be open (such as m.youtube.com, m.google.com). - Problems with the user interface in the night mode. - The download list disappears. What's new in beta 8.8.1/ 8.9.0: Incognito View: Your browsing history won't be recorded when you turn on Incognito viewing. - Finding a bar: Easier to use a search bar, with an interface that is smarter and more user-friendly. - Choose and copy: You can see how many words you choose in real time. - Text box: Better supports non-English keyboards and virtual keyboards. Fixed bugs: The Next button doesn't give an answer when used to find on a page on touch phones. - I can't save the painting in some cases. - Some websites may not be open (such as m.youtube.com, m.google.com). - Problems with the user interface in the night mode. What's new in 8.8.0: The download speed of large files has been improved. For large files, the speed has increased twice as much as the previous one; Create customizable shortcut keys for web pages and activities; The settings menu interface has been optimized; Added the opportunity to share on Twitter; Improved file manager with the ability to view images and create folders; Fixed errors: I can't choose a time story on my touchscreen; You can't log into UDisk on a SonyEricsson phone; There is no download of the UDisk list when THE UC BROWSER restarts; Only part of the image can be shown on the file manager if the image is larger than the screen; The menu has no answer when the image is not fully uploaded; The proxy configuration could not be saved. What's new in 8.7.0.218: Smart Account Manager: Users can switch between multiple accounts when registering on a website. - Convenient to use action menu: Long press BUTTON OK to call Action menu. - It's easy to save pages: The user can save the page directly without changing the page's name. What's new in 8.6.0.199: Fast Reads - Best RSS Reader. - Cloud - By synchronizing bookmarks through cloud synchronization, they will always be wherever you are, whenever you want. What's new in 8.2.0.132: Smoother - Although this version is larger than the latest version, it runs much smoother with low memory and optimization. - Convenient exchange - UC Browser brings exchange exchange Back! (Menu>Actions>Share>By Facebook). Share everything you want at first. - Easy Search - With the Find on the page (Menu>Find on the page), you can find keywords quickly and search makes no difference between capital or the lower letter of the case. - LABELS for phones WERTI - Labels are designed specifically for phones WERTI that allows users to have a much more effective experience when surfing the Internet. What's new in 8.0.3.107: Beautiful Appearance - Beauty is not a patent iPhone or Android phones, Java phones could also do that. Classic black gives you a cool style of technology. - More effectively - Optimized layout interface and menu, you can find useful features easily. - Magical Action Feature - When you're working on Windows through your PC, it's convenient to choose what you want in the right mouse button menu. The right mouse button in different places shows different pop-up menus. In the same philosophy, UC Browser knows what you want when you stay put and gives the most convenient options to choose from. What's new in 7.9.0.102: Automatic notification between night mode and daytime mode. - Back up the bookmarks. - More languages. - Additional Pic formats are supported. The new WebP image is almost 40% smaller than the jpeg image of similar quality. - Access connection timeout error fixed: The timeout problem has been fixed while browsing the web. - Corrected image download failure: Fixed timeout error when uploading an image. - Optimized cache management: Cash will be adjusted automatically. You no longer need to reset and clear the cache manually. What's New in 7.8: Faster Than Ever Before Optimizing the GUI New Social Element for Java and WM Thumbnail When Downloading Photos Traffic Check Search Boxes Search Boxes WLAN Automatic Switch What's New in 7.7: View Image Mode: There are many images filled in the Internet world, mainly aimed at attracting the attention of users. However, the widely welcomed image content in the PC is not so appealing in a mobile phone. Because of the size and quality of the image and the state of the network, viewing an image in your phone is not so easy and in a good experience to compare with a PC. Thanks to UC Browser 7.8, all of these problems are solved, with the new View Image mode feature, users can get a similar experience in their phone as what they do in the PC to view the image easily. - Compared to THE UC Browser 7.7, the viewing rate again increased by about 30%. - UC Browser for Java supports remember the current page and clean up the entire browser history, close the right-bottom tab, open the menu operation while loading the page to make it smoother to low-level.
