

PRECISION POLYMER COMPOUNDING SOLUTIONS

deceuninck

COMPOUNDING, ADDITIVES, CONSULTING & DESIGN

Core Services from Deceuninck Material Science

COMPOUNDING YOUR COMPETITIVE EDGE

At Deceuninck, your compounding edge starts with our 160-million pound annual compounding capacity and a half-century of expertise in processing polymers and developing applications for industry.

We hold more than 200 active patents on designs, processes, technologies and the material science that defines high performance in compounding for extrusion, injection molding and blow molding applications.

Our expertise is advanced by working with some of the world's most innovative additive manufacturers to develop and engineer materials and processes which create true value, manufacturing efficiencies, and lasting product attributes.

OUR EXPERTS. YOUR ADVANTAGE.

Formulation integrity, compound precision, extrusion process accuracy.

Deceuninck's Precision Polymer Compounding goes beyond blending to proprietary additive chemistry, patented processes, advanced engineering and complete solutions that create real market advantage.

Our deep expertise and understanding of additive systems, their chemistries, and how they interact in the compounding process, work to optimize efficiencies in die and extruder operations and end-user performance.

IDEAL COMPOUNDING SOLUTIONS FOR SPECIFIC MANUFACTURING REQUIREMENTS

Deceuninck offers three classes of compounding solutions to meet the exacting manufacturing requirements for processing, heat stability, weatherability, color consistency and application.

MASTERY CUSTOM BLENDS *For proprietary high performance*

Applications:

- Custom-designed proprietary materials
- High performance characteristics including heat distortion, heat gain, impact, UV
- Composites

ARTISTRY PREMIUM BLENDS *For superior exterior performance*

Applications:

- Window and door materials
- Decking and railing cap stocks
- Siding cap stocks

EFFICIENCY PERFORMANCE BLENDS *For rugged everyday performance*

Applications:

- General service PVC material
- Siding, window, and decking substrates
- Customer defined and intermediate compounds

Quality Assurance is a major component of our Precision Polymer Compounding Solutions. Rigorous testing protocols provide on-going quality control operations, and certificate of assurance documentation is available for each delivery.

PRECISION POLYMER COMPOUNDING SERVICES

Deceuninck's compounding expertise is available with a variety of capabilities and services. See Deceuninck's dedicated Material Science representatives for complete information on our full range of service options.

SERVICE	CAPABILITIES
Pharmaceutical-Grade Blending and Compounding	Precision measurement and execution for complete quality assurance, consistency and formula replication
Custom Material Development	Formulation development unique to customer needs including performance, processing, color and cost
On-Site Pelletization	Allows for complete control over preferred form – powder or pellets
Competitive Lead Times	Seven days for powder formulations; fourteen days for pellets; reduces inventory at customer site
Preferred Packaging	Multiple options, including gaylord, super sack, bulk tanker, railcar
On-Site Warehousing	Enables rapid availability and delivery
Material Sourcing	Expertise in developing reliable sourcing options
Toll Compounding	Your formulations, our compounding expertise
Testing & Quality Assurance	Materials research & development lab for testing and ongoing quality assurance. Certificates of assurance are available for each delivery
Consulting Services	Leverage our extensive processing, tooling, and material development experience to save time and money
