Press Release

November 1, 2018

Revolution XL™ Passive House Edition leads Deceuninck's energy-efficient lineup for Greenbuild

Deceuninck North America's industry-leading innovation, design and sustainability will be on display at the [Greenbuild International Conference](#) Nov. 14-16 in Chicago.

Leading the company's energy-efficient line-up is the Revolution XL™ Tilt & Turn window and door system, which now includes a Passive House Edition window.

The window is a certified [Passive House Component](#) for cool and temperate climates. It combines high-performance sustainability with Deceuninck's time-tested European concept for the North American market.

Featuring high thermal and acoustical performance, Revolution XL window's compression seal technology delivers exceptional resistance to air and water infiltration. It is ideal for the remodelling, replacement and new construction markets.

As the only Green Circle-certified PVC window extruder in the United States, Deceuninck's commitment to sustainability is demonstrated by a closed-loop approach, guiding how it sources recycled materials, how it designs and manufactures products, and how its products are shipped and delivered.

Experts from Deceuninck will be on hand at booth 1640 to discuss recent collaborations and industry-leading advancements for window and door profiles.
