Press ReleaseNovember 7, 2017

Deceuninck's Revolution XL™ Tilt & Turn leads lineup of energy-efficient products at Greenbuild

New system combines form and function to create an architect's dream

Architects seeking a window and door system that combines form and function with optimal structural integrity, thermal performance and durability can experience the revolution first hand during the Greenbuild International Conference and Expo, Nov. 8-10 in Boston.

Deceuninck North America's new Revolution XL™ Tilt & Turn is a passive house friendly suite of products with windows, a terrace door and a lift-and-slide door suitable for the remodelling, replacement or new construction markets. The door and window system features high thermal, acoustical and hurricane performance as well as compression seal technology, which delivers exceptional resistance to air and water infiltration. The Revolution XL Tilt and Turn system is also suitable for commercial and high-end residential applications.

As the only Green Circle-certified PVC window extruded in the United States, Deceuninck North America's commitment to sustainability is demonstrated by its closed-loop approach, dictating how it sources recycled materials, how it designs and manufactures products, and how its products are shipped and delivered.

At Deceuninck's booth #2815, Stergis Windows and Doors, the largest window manufacturer in Massachusetts, will showcase its energy-efficient, long-lasting custom window and door supply solutions. The company's products undergo extensive testing to meet stringent structural and performance criteria and includes window systems with the highest STC-rating in a variety of exterior colors.

Visit Deceuninck North America's booth #2815 at Greenbuild to learn more about these products as well as its customer-centric business approach.
