Press ReleaseSeptember 6, 2018

Deceuninck North America showcases innovative and colorful new products at GlassBuild

Deceuninck North America is showcasing several innovative products at GlassBuild America 2018, including window systems designed specifically for the unique needs of the Western market, colorful additions to its laminate portfolio and a supremely functional mullion reinforcement.

“At GlassBuild, we’ll showcase innovations directly informed by the voice of the customer,” said Filip Geeraert, president and CEO, Deceuninck North America. “The customer’s voice guides everything we do — from addressing immediate needs to anticipating future innovation and creating new trends. We will continue to listen with a focus on providing excellent products and service.”

GlassBuild attendees will see Deceuninck North America's (booth #1051) innovation, design and sustainability at work in Las Vegas, Sept. 12-14. Here’s a sneak peek.

Multi-lite Mullion Applications

Innergy® Rigid Thermal Reinforcements are now available in the form of structural mullion reinforcements for multi-lite window mullion applications. With high flexural strength and extremely low thermal conductivity, the mullion reinforcements provide an alternative to aluminum reinforcements with superior thermal insulation performance, thermal break and condensation resistance.

Western Market Growth

Deceuninck’s growth in the West remains strong and is being supported by new product introductions and system enhancements. Deceuninck is unveiling two new window systems designed for the high-performance residential/ light commercial markets and the housing market.

A Colorful Array

Deceuninck is adding new anthracite grey and black smooth laminate films to its color solutions program. Renolit makes the films, which will be part of Deceuninck’s Solex® laminate solutions line. The new colors meet a growing demand for darker colors in commercial window projects as well as providing a visually appealing and thermally efficient alternative to aluminium.

Revolution XL™ Tilt & Turn Buzz

Deceuninck's Revolution XL™ Tilt & Turn window and door system is continuing to create industry buzz. The system delivers a full suite of products – windows, a tilt/slide door and a terrace door ideal for the remodeling, replacement or new construction markets. With flexible design and a range of colors and finishes available, it is possible to achieve a similar appearance as aluminum with superior thermal performance.

Deceuninck will also feature its award-winning eos® window and patio door systems – featuring an affordable, energy-optimized system that is easy to manufacture and highly energy efficient, meeting the criteria for ENERGY STAR® 6.0. The 650.650 multitrack sliding door provides a flexible design, a two-track base and the ability to add additional single tracks as needed.

Visit Deceuninck North America's booth #1051 at GlassBuild America to learn more about these products as well as Deceuninck's customer-centric approach to business.
