Deceuninck Launches Revolution XL™ Tilt & Turn Window and Door System

System delivers full product suite ideal for commercial applications

Deceuninck North America's new Revolution XL™ Tilt & Turn window and door system achieves the best of both worlds: a European-style product designed for high-performance U.S. applications. Revolution XL delivers a full suite of products – windows, a tilt/slide door, a terrace door and a lift-and-slide door – suitable for the remodeling, replacement or new construction markets.

With flexible design and a range of colors and finishes available, it is possible to achieve a similar appearance as aluminum with superior thermal performance.

“The Revolution XL window and door system provides our customers with a full suite of products that feature a much sought-after European style while fitting U.S. application dimensions,” said Filip Geeraert, president and CEO, Deceuninck North America. “With Revolution XL as well as other new offerings unveiled during GlassBuild America, we demonstrate how our vision of innovation, design and sustainability translates into our products.”

Revolution XL provides the next level of structural performance and sound mitigation properties. It also is designed for impact rated coastal applications. Revolution XL excels in style, thermal capability, resistance to water infiltration and overall performance. It's low-profile styling provides minimum bulkiness and maximum daylight. Deceuninck's flexible design means many configurations are available using a low number of PVC profiles – resulting in lower inventories for manufacturers.

Attendees of GlassBuild America 2017 held in Atlanta, Georgia, Sept. 12-14, can visit Deceuninck North America's booth #3113 to experience the Revolution XL system.

###

The Deceuninck logo consists of the word "deceuninck" in a white, lowercase, sans-serif font, centered within a solid blue rectangular background.
