Deceuninck North America debuts new window systems for the West

Window systems designed for the Western U.S. must perform under extreme weather conditions and look good doing it. To meet a growing demand for high-performance windows with a modern aesthetic, Deceuninck North America has developed commercial and residential window systems designed specifically for the Western market.

“Deceuninck North America’s new window systems demonstrate our commitment to innovating high-performing products that meet the Western market’s needs,” said Filip Geeraert, president and CEO, Deceuninck North America. “These window systems are designed with advanced engineering to exceed our customers’ expectations and create lasting value.”

High-Performance Residential / Light Commercial Window System

The 326 window system, designed for the high-performance residential / light commercial markets, is ideal for multi-story, light commercial settings, including multi-family, hotels and educational facilities. The system’s array of mullions, astragals and transoms allow for a wide range of continuous frame or mulled combination units.

Additionally, the internally glazed casement, awning and picture window allow for ease of installation in multi-story buildings. An optional integral nail fin makes the system suitable for new construction and remodelling projects. Both single hung and single slider configurations are also available to address those application needs in the market.

The window system is designed for excellent thermal and structural performance with a 0.19 u-value and a DP50 rating. Fabricators and contractors can choose from multiple reinforcement options, including Innergy® Rigid Thermal Reinforcements, to meet individual project performance specifications.

Residential Window System

A new residential window system designed for the housing market is capable of thermal performance of 0.27 u-value and a DP35 rating. The system features three frame options that accommodate stucco construction and a standard sash. Frame options include an integral stucco key for new construction applications, a 1-3/8-inch nail fin setback and a stucco flange for replacement and remodelling projects.

All systems utilize Deceuninck's best-in-class Sunshield® PVC technology and are offered in a range of solid extruded colors as well as Solex® laminates.

GlassBuild America attendees can visit Deceuninck North America's booth 1051 to learn more. The annual industry-leading fenestration event is Sept.12-14 in Las Vegas.
