

EOS® WINDOW SYSTEM

Building a window to the future.

Setting a precedent for energy efficiency, Deceuninck's eos® features world-class engineering and advanced material science, creating a new standard for performance, economy and fabricator efficiency.

With a complete style offering, the eos window system offers a variety of color and finish options, including a core offering of stocked laminate colors with standard lead times.

eos meets or outperforms ENERGY STAR's newest ratings for energy efficiency, earning its "Most Efficient Window" designation.

- .27 U-factor in a double pane configuration without foam meets ENERGY STAR 6.0*.
- .20 U-factor in a triple pane configuration without argon gas or foam filled frames (.17 U-factor with argon) meets ENERGY STAR 6.0 Most Efficient Window.
- DP 50 rating baseline (upgrade capable) means improved structural, air and water performance.
- $\leq .04$ air infiltration performance exceeds ENERGY STAR 6.0 requirements.

Among the key design features are a unique, telescoping welded sill and triple weather seals, which enable a design pressure rating of DP50 that can be configured for higher performance. Various glass packages can be accommodated from 3/4 inch through 1-1/4 inches.
