

CCMP Monitoring Section & 2018 Workshop

CCMP Section

- “Monitoring Approach” section of CCMP
- MACC-led, STAC assist

Quick Content Checklist - Essential Components of a Revised CCMP

A Revised CCMP should:

1. ___ Identify changes between the existing and draft CCMP (comparison table mentioned under 5 below, but seems more applicable here – appendix?)
2. ___ Describe the NEP contribution to new information shaping actions and any changes (SOE, Climate Change)
3. ___ Map of the study area and reasoning for any boundary changes.
4. ___ Management Conference membership, reason for any changes, how it will support the NEPs ability to oversee, promote, fund CCMP implementation.
5. ___ Discussion of action plans and relationship to goals, priority problems, measurable objectives. Including:
 - proposed action
 - key activities
 - responsible parties
 - timeframe
 - cost range, sources of funding
 - performance measures
6. ___ Monitoring approach to tracking/detecting changes, improvements effectiveness with:
 - objectives
 - data and parameters
 - responsible parties
 - frequency of collection, reporting
 - how shared, stored, used
 - data gaps
 - changes with revisions
 - link to State of the Estuary
2. ___ Finance strategy for implementing the CCMP through diverse resources and partners with:

Content Checklist - Essential Components of a Revised CCMP

Include a Monitoring approach to track and detect changes and/or improvements within the study area (so change in environmental indicators can be detected over time), and effectiveness of CCMP Actions. This can be described in a separate, brief, higher level document, or chapter or action in the CCMP. The Monitoring approach should identify: a) objectives, b) data the NEP and partners are collecting for which parameters; c) the party/parties responsible for collecting the data; d) frequency of collecting and reporting the monitoring data; e) how the data are shared, reported, and used; f) data gaps; and g) additional funding needed for monitoring activities and filling data gaps. This section should explain how monitoring has/will change as a result of new/modified actions and priorities, and any new environmental indicators. Monitoring should be tied to the State of the Bay Report which has similar components. Please note: A Quality Management Plan or Quality Assurance Project Plan can supplement the Monitoring Plan, but does not in and of itself meet this requirement.

2018 Monitoring Workshop

An action in new CCMP?

Ideas on Goals:

- **Sharing**
- **Inventory monitoring activities, datasets**
- **Poll participants on monitoring needs**
- **Other goals of partners?**
- **Timeline, next steps?**
