

## Appendix P

### Comprehensive Bivalve Shellfish Survey Results

**Danielle Kreeger**, Ph.D., Partnership for the Delaware Estuary

**Priscilla Cole**, Partnership for the Delaware Estuary

May 15, 2010

The Bivalve Work Group polled bivalve experts on the relative vulnerability of different types of bivalves to five climate change parameters that are expected to change in the Delaware Estuary watershed. See Section 5.4 in Chapter 5 for an explanation of the survey method and Section 5.6 for interpretation of survey results. This appendix includes all major survey data collected.

#### **P.1 Vulnerability Examined by Bivalve Group.**

Relative levels of vulnerability concern and response confidence are shown in bar plots for how five climate change drivers (x-axis) could affect six different aspects of bivalve fitness, and for three different bivalve groupings

(non-tidal freshwater mussels, freshwater tidal bivalves, brackish/saltwater bivalves). For all plots, the y-axis is the relative weight derived from the risk assessment calculation. As explained in Section 5.5, each of the 18 plots (6 fitness metrics x 3 bivalve types) depicts relative vulnerability in blue bars and relative confidence in the projections in paired red bars.

**Table P.1.** The sample size for the survey was eleven people, and eight agreed to be listed.

#### List of Figures:

- P.1.1 Freshwater Mussel - Physiological Health
- P.1.2 Freshwater Mussel – Reproductive Success
- P.1.3 Freshwater Mussel – Change in Habitat Support
- P.1.4 Freshwater Mussel – Interactions with Invasive Species
- P.1.5 Freshwater Mussel – Population Productivity
- P.1.6 Freshwater Mussel – Shifts in Species Composition or Ranges
- P.1.7 Freshwater Tidal Bivalves - Physiological Health
- P.1.8 Freshwater Tidal Bivalves – Reproductive Success
- P.1.9 Freshwater Tidal Bivalves – Change in Habitat Support
- P.1.10 Freshwater Tidal Bivalves – Interactions with Invasive Species
- P.1.11 Freshwater Tidal Bivalves – Population Productivity

- P.1.12 Freshwater Tidal Bivalves – Shifts in Species Composition or Ranges
- P.1.13 Saltwater Bivalves - Physiological Health
- P.1.14 Saltwater Bivalves – Reproductive Success
- P.1.15 Saltwater Bivalves – Change in Habitat Support
- P.1.16 Saltwater Bivalves – Interactions with Invasive Species
- P.1.17 Saltwater Bivalves – Population Productivity
- P.1.18 Saltwater Bivalves – Shifts in Species Composition or Ranges

**P.2 Vulnerability Contrasted Among Bivalve Groups.** Relative levels of vulnerability and confidence were integrated (multiplied together) to derive a composite weighted vulnerability index, a unitless metric. For each of the six aspects of bivalve fitness, this vulnerability index is compared among the three bivalve groups in triplicate sets of bars. The five climate drivers are shown on the x-axes.

List of Figures:

- P.2.1 Physiological Health Compared Among Bivalves Types
- P.2.2 Reproductive Success Compared Among Bivalves Types
- P.2.3 Change in Habitat Support Compared Among Bivalves Types
- P.2.4 Interactions with Invasive Species Compared Among Bivalves Types
- P.2.5 Population Productivity Compared Among Bivalves Types
- P.2.6 Shifts in Species Composition or Ranges Compared Among Bivalves Types

**P.3 Comparison of Effectiveness of Adaptation Options.** For each of the five climate drivers, the projected feasibility and effectiveness of various adaptation tactics was evaluated for alleviating expected impacts. The three different groups of bivalves were compared in the three columns in each table.

List of Tables:

- P.3.1 Adaptation Tactics for Temperature Changes Compared Among Bivalves Types
- P.3.2 Adaptation Tactics for Precipitation Changes Compared Among Bivalves Types
- P.3.3 Adaptation Tactics for Sea level and Salinity Rise Compared Among Bivalves Types
- P.3.4 Adaptation Tactics for pH Changes Compared Among Bivalves Types
- P.3.5 Adaptation Tactics for Storminess Changes Compared Among Bivalves Types

**P.4 Comparison of Ecosystem Service Changes.** For each of the five climate drivers, the projected ecosystem services changes were evaluated. The responses represent the net ecosystem gains or losses to each vulnerability due to the climate drivers. Responses of ‘no net change’ or ‘not sure’ are not represented by these figures.

List of Figures:

- P.4.1. Ecosystem service changes in FWM, from temperature changes by 2100.
- P.4.2. Ecosystem service changes in FWM, from precipitation changes by 2100.
- P.4.3. Ecosystem service changes in FWM, from sea level rise and salinity changes by 2100.
- P.4.4. Ecosystem service changes in FWM, from pH changes by 2100.

- P.4.5. Ecosystem service changes in FWM, from storm intensity and frequency changes by 2100.
- P.4.6. Ecosystem service changes in FWT, from temperature changes by 2100.
- P.4.7. Ecosystem service changes in FWT, from precipitation changes by 2100.
- P.4.8. Ecosystem service changes in FWT, from sea level rise and salinity changes by 2100.
- P.4.9. Ecosystem service changes in FWT, from pH changes by 2100.
- P.4.10. Ecosystem service changes in FWT, from storm intensity and frequency changes by 2100.
- P.4.11. Ecosystem service changes in SW, from temperature changes by 2100.
- P.4.12. Ecosystem service changes in SW, from precipitation changes by 2100.
- P.4.13. Ecosystem service changes in SW, from sea level rise and salinity changes by 2100.
- P.4.14. Ecosystem service changes in SW, from pH changes by 2100.
- P.4.15. Ecosystem service changes in SW, from storm intensity and frequency changes by 2100.

## P.1 Vulnerability Examined by Bivalve Group

**Figure P.1.1.** Relative levels of concern regarding the potential impact of changing physical and chemical conditions on **shifts in species composition range** of freshwater mussels (blue) and relative confidence in these projections (red.)

**Figure P.1.2.** Relative levels of concern regarding the potential impact of changing physical and chemical conditions on **physiological health** of freshwater mussels (blue) and relative confidence in these projections (red.)

**Figure P.1.3** Relative levels of concern regarding the potential impact of changing physical and chemical conditions on **reproductive success** of freshwater mussels (blue) and relative confidence in these projections (red.)

**Figure P.1.4.** Relative levels of concern regarding the potential impact of changing physical and chemical conditions on **interaction with invasive species** of freshwater mussels (blue) and relative confidence in these projections (red.)

**Figure P.1.5.** Relative levels of concern regarding the potential impact of changing physical and chemical conditions on **physiological health** of freshwater mussels (blue) and relative confidence in these projections (red.)

**Figure P.1.6.** Relative levels of concern regarding the potential impact of changing physical and chemical conditions on **change in habitat support** of freshwater mussels (blue) and relative confidence in these projections (red.)

**Figure P.1.16.** Relative levels of concern regarding the potential impact of changing physical and chemical conditions on **interactions with invasive species** of freshwater mussels (blue) and relative confidence in these projections (red.)

**Figure P.1.17.** Relative levels of concern regarding the potential impact of changing physical and chemical conditions on **population productivity** of freshwater mussels (blue) and relative confidence in these projections (red.)

**Figure P.1.18.** Relative levels of concern regarding the potential impact of changing physical and chemical conditions on **shifts in species composition or ranges** of freshwater mussels (blue) and relative confidence in these projections (red.)

## P.2 Vulnerability Contrasted Among Bivalve Groups

**Figure P.2.1.** Relative levels of concern regarding the potential impact of changing physical and chemical conditions on **physiological health** of freshwater mussels (blue) and relative confidence in these projections (red.)

**Figure P.2.2.** Relative levels of concern regarding the potential impact of changing physical and chemical conditions on **reproductive success** of freshwater mussels (blue) and relative confidence in these projections (red.)

## Change in Habitat Support

Combined Vulnerability Score Impacts + Confidenc

**Figure P.2.3.** Relative levels of concern regarding the potential impact of changing physical and chemical conditions on **change in habitat support** of freshwater mussels (blue) and relative confidence in these projections (red.)

## Interactions with Invasive Species

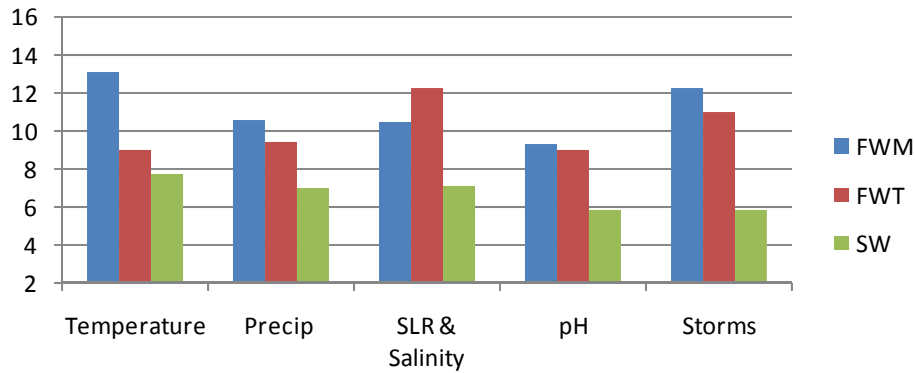

Combined Vulnerability Score Impacts + Confidenc

**Figure P.2.4.** Relative levels of concern regarding the potential impact of changing physical and chemical conditions on **interactions with invasive species** of freshwater mussels (blue) and relative confidence in these projections (red.)

## Population Productivity

Combined Vulnerability Score Impacts + Confidenc

**Figure P.2.5.** Relative levels of concern regarding the potential impact of changing physical and chemical conditions on **population productivity** of freshwater mussels (blue) and relative confidence in these projections (red.)

## Shifts in Species Composition or Ranges

Combined Vulnerability Score Impacts + Confidenc

**Figure P.2.6.** Relative levels of concern regarding the potential impact of changing physical and chemical conditions on **physiological health** of freshwater mussels (blue) and relative confidence in these projections (red.)

### P.3 Comparison of Effectiveness of Adaptation Options

**Table P.3.1.** Effectiveness Index of various adaptation options for offsetting vulnerabilities of freshwater non-tidal mussels (FWM), freshwater tidal bivalves (FWT), and brackish/saltwater bivalves (SW) exposed to projected shifts in **temperature** by 2100.

		Combined Scores - Effectiveness + Feasibility		
		FWM	FWT	SW
Temperature Changes	Monitor/Research Vulnerability Impacts	Highest	Highest	Med-High
	Hatchery Propagation and Restocking of Populations	Med	Med-High	Med-Low
	Transplants of Broodstock to Expand Ranges	Med	Med	Med-High
	Metapopulation Expansion for Common Species	Med	Med-Low	
	Restoration of Extirpated Rare Species	Low	Low	
	Dam Removals to Assist Dispersal on Fish Hosts	Med-High		
	Assisted Migration (of southern species) to Fill Open Niches	Low	Low	
	In-stream and/or Riparian Habitat Enhancements	Highest	Med-High	
	Water Quality Management	Med	Med-High	Med
	Water Quantity (Flow) Management	Med	Med	Med
	Shellplanting on Seed Beds (Oysters)			Highest
	Shellplanting or Living Shorelines Along Marshes/Tributaries			Med-High

**Table P.3.2.** Effectiveness Index of various adaptation options for offsetting vulnerabilities of freshwater non-tidal mussels (FWM), freshwater tidal bivalves (FWT), and brackish/saltwater bivalves (SW) exposed to projected shifts in **Precipitation Changes** by 2100.

Precip Changes	Monitor/Research Vulnerability Impacts	Highest	Highest	Highest
	Hatchery Propagation and Restocking of Populations	Med-Low	Med-Low	Med-Low
	Transplants of Broodstock to Expand Ranges	Med-Low	Low	Med
	Metapopulation Expansion for Common Species	Med-Low	Low	
	Dam Removals to Assist Dispersal on Fish Hosts	Med		
	Restoration of Extirpated Rare Species	Low	Low	
	Assisted Migration (of southern species) to Fill Open Niches	Med	Low	
	In-stream and/or Riparian Habitat Enhancements	Low	Med-High	
	Water Quality Management	Highest	Med-Low	Med-Low
	Water Quantity (Flow) Management	Med-Low	Med	Med
	Shellplanting on Seed Beds (Oysters)			Med-High
	Shellplanting or Living Shorelines Along Marshes/Tributaries			Med-High

**Table P.3.3.** Effectiveness Index of various adaptation options for offsetting vulnerabilities of freshwater non-tidal mussels (FWM), freshwater tidal bivalves (FWT), and brackish/saltwater bivalves (SW) exposed to projected shifts in **sea level rise** by 2100.

Sea Level Rise & Salinity	Monitor/Research Vulnerability Impacts	Med-High	Highest	Highest
	Hatchery Propagation and Restocking of Populations	Med-Low	Med-Low	Med-High
	Transplants of Broodstock to Expand Ranges	Med-Low	Med-Low	Med-High
	Metapopulation Expansion for Common Species	Low	Med-Low	
	Restoration of Extirpated Rare Species	Low	Low	
	Dam Removals to Assist Dispersal on Fish Hosts	Med		
	Assisted Migration (of southern species) to Fill Open Niches	Low	Low	
	In-stream and/or Riparian Habitat Enhancements	Med-Low	Med	
	Water Quality Management	Med-Low	Med-Low	Med-Low
	Water Quantity (Flow) Management	Med	Med	Med-Low
	Shellplanting on Seed Beds (Oysters)			Med-High
	Shellplanting or Living Shorelines Along Marshes/Tributaries			Med

**Table P.3.4.** Effectiveness Index of various adaptation options for offsetting vulnerabilities of freshwater non-tidal mussels (FWM), freshwater tidal bivalves (FWT), and brackish/saltwater bivalves (SW) exposed to projected shifts in **pH Changes** by 2100.

pH Changes	Monitor/Research Vulnerability Impacts	Highest	Highest	Highest
	Hatchery Propagation and Restocking of Populations	Med-Low	Med-Low	Med
	Transplants of Broodstock to Expand Ranges	Med-Low	Med-Low	Med
	Metapopulation Expansion for Common Species	Med-Low	Low	
	Restoration of Extirpated Rare Species	Low	Low	
	Dam Removals to Assist Dispersal on Fish Hosts	Med-Low		
	Assisted Migration (of southern species) to Fill Open Niches	Low	Low	
	In-stream and/or Riparian Habitat Enhancements	Med	Med-Low	
	Water Quality Management	Med-Low	Med	Med-Low
	Water Quantity (Flow) Management	Med	Med-Low	Med-Low
	Shellplanting on Seed Beds (Oysters)			Med-High
	Shellplanting or Living Shorelines Along Marshes/Tributaries			Med

**Table P.3.5.** Effectiveness Index of various adaptation options for offsetting vulnerabilities of freshwater non-tidal mussels (FWM), freshwater tidal bivalves (FWT), and brackish/saltwater bivalves (SW) exposed to projected shifts in **increased storm intensity and frequency** by 2100.

Increased Storm Intensity & Frequency	Monitor/Research Vulnerability Impacts	Highest	Highest	Med-High
	Hatchery Propagation and Restocking of Populations	Med-Low	Med-Low	Med
	Transplants of Broodstock to Expand Ranges	Med-Low	Med-Low	Med-High
	Metapopulation Expansion for Common Species	Med-Low	Med-Low	
	Restoration of Extirpated Rare Species	Low	Low	
	Dam Removals to Assist Dispersal on Fish Hosts	Med-Low	Low	
	Assisted Migration (of southern species) to Fill Open Niches	Low	Low	
	In-stream and/or Riparian Habitat Enhancements	Highest	Med-High	
	Water Quality Management	Med	Med-Low	Med-Low
	Water Quantity (Flow) Management	Highest	Med-High	Med
	Shellplanting on Seed Beds (Oysters)			Highest
	Shellplanting or Living Shorelines Along Marshes/Tributaries			Highest

## P.4 Ecosystem Services Changes

Figure P.4.3 Ecosystem service changes in FWM, from **sea level rise and salinity** changes by 2100.

Figure P.4.4 Ecosystem service changes in FWM, from **pH** changes by 2100.

### Ecosystem Services Changes of Freshwater Mussels from Storm Change

Figure P.4.5 Ecosystem service changes in FWM, from **storm intensity and frequency** changes by 2100.

### Ecosystem Services Changes of Freshwater Tidal Mussels from Temperature Change

Figure P.4.6 Ecosystem service changes in FWT, from **temperature** changes by 2100.
