

How to Make a Sedimentary Rock Cycle:

<https://littlebinsforlittlehands.com/rock-cycle-for-kids/>

Sedimentary rocks are usually layers with different bits represented by the ingredients below. The layers are pressed together but not too tightly.

The layers of sand, mud, and rock or pebbles are compressed over a long period of time. However, our edible sedimentary rock doesn't take years to form.

Ingredients: 3 tablespoons of butter, 6 cups rice cereal, 4 cups mini-marshmallows, 1 cup chocolate chips, 1 cup mini-M&Ms

Directions:

1. Grease an 8x8" baking pan
2. In a large microwave safe bowl, heat the marshmallows and butter for 1-2 minutes and stir.
3. Add rice cereal to melted marshmallows and butter, stir.
4. Scoop half your Rice Krispies mixture into the bottom of our greased baking pan and press firmly.
5. Add a chocolate chip layer
6. Gently press the remaining Rice Krispies onto the chocolate chips
7. Add M&M's onto the top layer of Rice Krispies and carefully pressing them down to stick.
8. Let sit for an hour and slice into bars.

David, Goliath and Pressure

When David arrived at the Israelite camp he saw Goliath, the Philistine champion, applying pressure to the men of the camp. Goliath wanted to break the will of Israel. He used fear to control those around him. David didn't allow Goliath to control him. He knew what was going on was wrong. David was willing to take a stand and face Goliath with the gifts that God had given to him.
