Job Narrative
680-250910-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

- Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

GC/MS VOA
Method 8260D_DOD5: The initial calibration verification (ICV) analyzed in batch 680-834962 was outside method criteria for the following analyte(s): Dichlorodifluoromethane. As indicated in the reference method, sample analysis may proceed; however, sample results were non-detects and have been reported as qualified data. (ICV 680-834962/4)

Method 8260D_DOD5: The initial calibration verification (ICV) analyzed in batch 680-836351 was outside method criteria for the following analyte(s): Carbon disulfide. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated. The data has been qualified and reported.

Method 8260D_DOD5: The continuing calibration verification (CCV) associated with batch 680-839410 recovered outside acceptance criteria, low biased, for Bromomethane. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8260D_DOD5: The method blank for analytical batch 680-839410 contained 4-Chlorotoluene above the reporting limit (RL). None of the samples associated with this method blank contained the target compound; therefore, re-extraction and/or re-analysis of samples were not performed.

Method 8260D_DOD5: Surrogate recovery for the following sample was outside the upper control limit: OU6-MW-93-20240516 (680-250910-22). This sample did not contain any target analytes; therefore, re-extraction and/or re-analysis was not performed.

Method 8260D_DOD5: The continuing calibration verification (CCV) associated with batch 680-839604 recovered above the upper control limit for Bromochloromethane, 2-Butanone (MEK) and Chloromethane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8260D_DOD5: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for analytical batch 680-839604 recovered outside control limits for the following analytes: Bromomethane and Tetrachloroethene.

Method 8260D_DOD5: The method blank for 680-839604 contained 4-Chlorotoluene above the method detection limit (MDL). Associated samples were not re-analyzed because the method blank results were less than the reporting limit (RL) OR practical quantitation limit (PQL).

Method 8260D_DOD5: The continuing calibration verification (CCV) associated with batch 680-840104 recovered above the upper control limit for Bromochloromethane, Carbon disulfide, Carbon tetrachloride, Cyclohexane, 2,2-Dichloropropane, Methylcyclohexane and n-Butylbenzene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8260D_DOD5: The method blank for 680-840104 contained Tetrachloroethene above the method detection limit (MDL). Associated samples were not re-analyzed because the method blank results were less than the reporting limit (RL) OR practical quantitation limit (PQL).

Method 8260D_DOD5: The continuing calibration verification (CCV) associated with batch 680-840104 recovered outside acceptance criteria, low biased, for Dichlorodifluoromethane. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8260D_DOD5: The laboratory control sample duplicate (LCSD) for analytical batch 680-840104 recovered outside control limits for the following analytes: Cyclohexane, Methylcyclohexane, n-Butylbenzene and 1,1,2-Trichloro-1,2,2-trifluoroethane. These analytes were biased high in the LCSD and were not detected in the associated samples; therefore, the data have been reported.

Method 8260D_DOD5: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for analytical batch 680-840104 recovered outside control limits for the following analytes: Methylcyclohexane.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA

Method 8270E_DOD5: The initial calibration verification (ICV) result for batch 680-836548 was above the upper control limit. The affected analytes are: 2,4-Dimethylphenol. Sample results were non-detects, and have been reported as qualified data.

Method 8270E_DOD5: The continuing calibration verification (CCV) associated with batch 680-838829 recovered above the upper control limit for Bis(2-chloroethyl)ether. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8270E_SIM_DOD5: Surrogate recovery for the following sample was outside control limits: OU6-MW-279-20240516 (680-250910-4). Re-extraction and/or re-analysis was performed and surrogate recovery was outside control limits.

Method 8270E_SIM_DOD5: The method blank for preparation batch 680-838962 and analytical batch 680-838979 contained Naphthalene above the method detection limit (MDL). Associated sample(s) were not re-extracted and/or re-analyzed because results were greater than 10X the value found in the method blank.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC VOA

Method RSK_175_DOD5: The method requirement for no headspace was not met. The following volatile samples were analyzed with significant headspace in the sample container(s): OU6-MW-279-20240516 (680-250910-4) and OU6-MW-261-20240516 (680-250910-8). Job Narrative
680-250965-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

- Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 5/18/2024 10:06 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 0.9°C.

GC/MS VOA
Method 8260D_DOD5: The initial calibration verification (ICV) analyzed in batch 680-836351 was outside method criteria for the following analyte(s): Carbon disulfide. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated. The data has been qualified and reported.

Method 8260D_DOD5: The initial calibration verification (ICV) analyzed in batch 680-836362 was outside method criteria for the following analyte(s): Bromoform and Carbon disulfide. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8260D_DOD5: The continuing calibration verification (CCV) associated with batch 680-840324 recovered above the upper control limit for Bromochloromethane, Carbon disulfide, Carbon tetrachloride, Cyclohexane, 1,1-Dichloroethene, 2,2-Dichloropropane, n-Butylbenzene and 1,1,2-Trichloro-1,2,2-trifluoroethane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8260D_DOD5: The laboratory control sample (LCS) for analytical batch 680-840324 recovered outside control limits for the following analytes: Bromochloromethane. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 8260D_DOD5: The laboratory control sample duplicate (LCSD) for analytical batch 680-840324 recovered outside control limits for the following analytes: Cyclohexane, Methylcyclohexane, n-Butylbenzene and 1,1,2-Trichloro-1,2,2-trifluoroethane. These analytes were biased high in the LCSD and were not detected in the associated samples; therefore, the data have been reported.

Method 8260D_DOD5: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for analytical batch 680-840324 recovered outside control limits for the following analytes: Dichlorodifluoromethane, Methylcyclohexane and 1,1,2-Trichloro-1,2,2-trifluoroethane.

Method 8260D_DOD5: The method blank for 680-840324 contained Methylcyclohexane above the method detection limit (MDL). Associated samples were not re-analyzed because the method blank results were less than the reporting limit (RL) OR practical quantitation limit (PQL).

Method 8260D_DOD5: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 680-840324.

Method 8260D_DOD5: Surrogate recovery for the following sample was outside control limits: OU6-MW-262-20240517 (680-250965-4). Evidence of matrix interference due to high target analytes is present; therefore, re-extraction and/or re-analysis was not performed.

Method 8260D_DOD5: Surrogate recovery for the following sample was outside the upper control limit: TRIP-BLANK-20240517 (680-250965-7). This sample did not contain any target analytes; therefore, re-extraction and/or re-analysis was not performed.

Method 8260D_DOD5: The continuing calibration verification (CCV) associated with batch 680-840504 recovered above the upper control limit for Bromoform. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8260D_DOD5: The laboratory control sample (LCS) for analytical batch 680-840504 recovered outside control limits for the following analytes: Bromoform. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 8260D_DOD5: The laboratory control sample duplicate (LCSD) for analytical batch 680-840504 recovered outside control limits for the following analytes: Bromoform and 1,1,2,2-Tetrachloroethane. These analytes were biased high in the LCSD and were not detected in the associated samples; therefore, the data have been reported.

Method 8260D_DOD5: The method blank for 680-840504 contained Methylcyclohexane above the method detection limit (MDL). Associated samples were not re-analyzed because the method blank results were less than the reporting limit (RL) OR practical quantitation limit (PQL).

Method 8260D_DOD5: The continuing calibration verification (CCV) associated with batch 680-840531 recovered outside acceptance criteria, low biased, for 1,2-Dibromo-3-Chloropropane. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Method 8260D_DOD5: The laboratory control sample (LCS) for analytical batch 680-840531 recovered outside control limits for the following analytes: Bromobenzene, 2-Chlorotoluene, 4-Chlorotoluene, N-Propylbenzene, o-Xylene, Styrene, 1,2,4-Trimethylbenzene, 1,3,5-Trimethylbenzene and Xylenes, Total. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 8260D_DOD5: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for analytical batch 680-840531 recovered outside control limits for the following analytes: Several compound.

Method 8260D_DOD5: The method blank for analytical batch 680-840531 contained 4-Isopropyltoluene and n-Butylbenzene above the method detection limit (MDL). Associated samples were not re-analyzed because the method blank results were less than the reporting limit (RL) OR practical quantitation limit (PQL).

Job Narrative
680-251033-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

- Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

GC/MS VOA
Method 8260D_DOD5: The initial calibration verification (ICV) analyzed in batch 680-836362 was outside method criteria for the following analyte(s): Bromoform and Carbon disulfide. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8260D_DOD5: The continuing calibration verification (CCV) associated with batch 680-840334 recovered above the upper control limit for Bromoform. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8260D_DOD5: The continuing calibration verification (CCV) associated with batch 680-840334 recovered outside acceptance criteria, low biased, for Dichlorodifluoromethane and Methyl acetate. A reporting limit (RL) standard was analyzed, and the target analytes are detected. Since the associated samples were non-detect for the analyte(s), the data are reported.

Job Narrative
680-251090-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

- Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 5/22/2024 9:30 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 0.7°C, 1.9°C and 3.3°C.

GC/MS VOA
Method 8260D_DOD5: The method blank for analytical batch 680-840531 contained 4-Isopropyltoluene and n-Butylbenzene above the method detection limit (MDL). Job Narrative
680-251152-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

- Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 5/23/2024 9:29 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 1.2°C, 2.8°C and 4.7°C.

GC/MS VOA
Method 8260D_DOD5: The method blank for 680-840706 contained n-Butylbenzene above the method detection limit (MDL). Associated samples were not re-analyzed because the method blank results were less than the reporting limit (RL) OR practical quantitation limit (PQL).

Method 8260D_DOD5: The following samples were diluted to bring the concentration of target analytes within the calibration range: OU6-MW-271-20240522 (680-251152-5), OU6-MW-251-20240522 (680-251152-7), OU6-MW-157-20240522 (680-251152-9), OU6-MW-289-20240522 (680-251152-10), OU6-MW-291-20240522 (680-251152-11), Dup-06-20240522 (680-251152-12), OU6-DMW-9B-20240522 (680-251152-14), OU6-MW-285-20240522 (680-251152-17) and OU6-MW-255-20240522 (680-251152-18). Elevated reporting limits (RLs) are provided.

Method 8260D_DOD5: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 680-840706.

Method 8260D_DOD5: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for analytical batch 680-840935 recovered outside control limits for the following analytes: Bromomethane. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 8260D_DOD5: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 680-840935.

Method 8260D_DOD5: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for analytical batch 680-841256 recovered outside control limits for the following analytes: Dichlorodifluoromethane. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 8260D_DOD5: Reanalysis of the following sample was performed outside of the analytical holding time for dichlorodifluoromethane due to instrumental failure during lab-wide technical difficulties: OU6-MW-285-20240522 (680-251152-17).

Method 8260D_DOD5: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for analytical batch 680-841256 recovered outside control limits for the following analytes: Dichlorodifluoromethane and Methylcyclohexane.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
Method 8270E_DOD5: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 680-839856 and analytical batch 680-839928 recovered outside control limits for the following analytes: 4-Chloroaniline and Pyridine.

Method 8270E_SIM_DOD5: Elevated reporting limits are provided for the following sample due to insufficient sample provided for preparation: OU6-DUP-5-20240522 (680-251152-3).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Pesticides/PCBs
Method 8081B_8082A_D5: Surrogate recovery for the following samples were outside control limits: OU6-MW-272-20240522 (680-251152-2), (680-251033-U-1-A), (680-251033-T-1-A MS), (680-251033-V-1-A MS), (680-251033-T-1-B MSD) and (680-251033-V-1-B MSD). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method 8081B_8082A_D5: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for preparation batch 680-839562 and analytical batch 680-839672 recovered outside control limits for the following analyte: Endrin ketone. This analyte was biased high in the LCS and was not detected in the associated samples; therefore, the data has been reported.

Method 8081B_8082A_D5: Two surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: OU6-DUP-5-20240522 (680-251152-3) and (LCS 680-839861/2-A). Re-extraction of the sample would have been outside of holding time. These results have been reported and qualified.

Method 8081B_8082A_D5: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for preparation batch 680-839861 and analytical batch 680-840047 recovered outside control limits for the following analytes: Endrin ketone and Methoxychlor. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data has been reported.

Method 8081B_8082A_D5: The following analytes recovered outside control limits for the LCS associated with preparation batch 680-839861 and analytical batch 680-840047: Endosulfan I and gamma-BHC (Lindane). This is not indicative of a systematic control problem because these were random marginal exceedances. Qualified results have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

HPLC/IC
Method 9056A_OF_48H_D5: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 680-839434 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
Method 6020A_DOD5 - Total Recoverable: The interference check standard solution (ICSA) associated with batch 680-840087 had results for one or more elements at a level greater than 2 times the method detection limit (MDL). The vendor acknowledges that these elements are trace impurities in the ICSA standard. These results are not indicative of a matrix interference.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Job Narrative
680-251210-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

- Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 5/24/2024 9:55 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 0.2°C, 2.6°C and 3.1°C.

Method 8081B_8082A_D5: Two surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: OU6-MW-243-20240523 (680-251210-7) and (LCS 680-839861/2-A). Re-extraction of the sample would have been outside of holding time. These results have been reported and qualified.

Method 8081B_8082A_D5: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for preparation batch 680-839861 and analytical batch 680-840047 recovered outside control limits for the following analytes: Endrin ketone and Methoxychlor. No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

HPLC/IC

The vendor acknowledges that these elements are trace impurities in the ICSA standard. These results are not indicative of a matrix interference.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.
