Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southeast, LLC Project Manager.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Estimated: The analyte was positively identified; the quantitation is an estimation
M	Manual integrated compound.
Q	One or more quality control criteria failed.
U	Undetected at the Limit of Detection.

GC VOA

Qualifier	Qualifier Description
U	Undetected at the Limit of Detection.

HPLC/IC

Qualifier	Qualifier Description
M	Manual integrated compound.
U	Undetected at the Limit of Detection.

Metals

Qualifier	Qualifier Description
U	Undetected at the Limit of Detection.

General Chemistry

Qualifier	Qualifier Description
U	Undetected at the Limit of Detection.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Sample Summary

680-251332-2	TRIP-BLANK-20240529	Water	05/29/24 00:00	05/30/24 10:44

Job Narrative
680-251332-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

- Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 5/30/2024 10:44 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 4.2°C.

GC/MS VOA
Method 8260D_DOD5: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for analytical batch 680-841764 recovered outside control limits for the following analytes: Bromomethane and Chloroethane. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 8260D_DOD5: The method blank for analytical batch 680-841764 contained n-Butylbenzene above the method detection limit (MDL). Associated samples were not re-analyzed because the method blank results were less than 1/2 of the reporting limit (RL) OR practical quantitation limit (PQL).

Method 8260D_DOD5: The trip blank for analytical batch 680-841764 contained n-Butylbenzene above the method detection limit (MDL). None of the samples associated with this trip blank contained the target compound; therefore, re-extraction and/or re-analysis of samples were not performed.

TRIP-BLANK-20240529 (680-251332-2)

Method 8260D_DOD5: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 680-841764.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

HPLC/IC
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
Method SM4500_S2_F: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 680-841210.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Data Qualification Validation Report
OU6 Spring 2024 Annual Monitoring
Defense Supply Center Richmond

Facility:	DSCR
Event ID:	DSCR_FY24_OU6_Annual
Created By:	NA\JonesA10
Created Date:	7/18/2024 12:37:00 PM
Checks:	Dilution Factor, Estimated results, Field Blank Contamination, Field Duplicate RPD, HTT-2, HTT-3, HTT-4 Lab Blank Contamination, Preservative, Relative Percent Difference (RPD), Spike Recovery - Multiple Rules Surrogate Recovery, Trip Blank Contamination, Verify Sample Units

Data Qualification Validation Report
OU6 Spring 2024 Annual Monitoring
Defense Supply Center Richmond

Facility:	DSCR
Event ID:	DSCR_FY24_OU6_Annual
Created By:	NA\JonesA10
Created Date:	7/18/2024 12:37:00 PM
Checks:	Dilution Factor, Estimated results, Field Blank Contamination, Field Duplicate RPD, HTT-2, HTT-3, HTT-4 Lab Blank Contamination, Preservative, Relative Percent Difference (RPD), Spike Recovery - Multiple Rules Surrogate Recovery, Trip Blank Contamination, Verify Sample Units

Data Qualification Validation Report
OU6 Spring 2024 Annual Monitoring
Defense Supply Center Richmond

Facility:	DSCR
Event ID:	DSCR_FY24_OU6_Annual
Created By:	NA\JonesA10
Created Date:	7/18/2024 12:37:00 PM
Checks:	Dilution Factor, Estimated results, Field Blank Contamination, Field Duplicate RPD, HTT-2, HTT-3, HTT-4 Lab Blank Contamination, Preservative, Relative Percent Difference (RPD), Spike Recovery - Multiple Rules Surrogate Recovery, Trip Blank Contamination, Verify Sample Units

Data Qualification Validation Report
OU6 Spring 2024 Annual Monitoring
Defense Supply Center Richmond

Facility:	DSCR
Event ID:	DSCR_FY24_OU6_Annual
Created By:	NA\JonesA10
Created Date:	7/18/2024 12:37:00 PM
Checks:	Dilution Factor, Estimated results, Field Blank Contamination, Field Duplicate RPD, HTT-2, HTT-3, HTT-4 Lab Blank Contamination, Preservative, Relative Percent Difference (RPD), Spike Recovery - Multiple Rules Surrogate Recovery, Trip Blank Contamination, Verify Sample Units

Reason Codes	Reason Code Descriptions
EBH	Analytes detected in the Equipment Blank greater than or equal to the Quantitation Limit.
ER1	The reported inorganic result is greater than/equal to the MDL and less than the RDL or QL; it should be considered an estimated value.
NC	No code applied
ER2	The reported organic result is greater than/equal to the MDL and less than the RDL or QL; it should be considered an estimated value.
SURR1	Associated Detected result of a Surrogate Recovery less than the lower control limit but greater than the lower Surrogate cutoff.
SURR3	Associated Detected result of a Surrogate recovery exceeding the upper control limt.
LBH	Contamination detected in the Lab Blank greater than or equal to the Quantitation Limit.
LCSH	The LCS recovery exceeds the upper control limit.
MSDH	The Matrix Spike Duplicate recovery for a sample exceeds the upper cutoff limit.
RPD3	High relative percent difference (RPD) observed between MS/MSD. The reported result may be imprecise.
MSH	The Matrix Spike recovery for a sample exceeds the upper control limit.
LCSL	The LCS recovery is less than the lower control limit but greater than the lower cutoff.
SURR4	Associated ND result of a Surrogate recovery less than the lower control limit but greater than the lower Surrogate cutoff.
MSDL	The Matrix Spike Duplicate Recovery for a sample is less than lower control limit but greater than the the lower cutoff.
MSDLCO	The Matrix Spike Duplicate recovery for a sample is less than the lower cutoff.
MSL	The Matrix Spike recovery for a sample is less than lower control limit but greater than the the lower cutoff.
MSLCO	The Matrix Spike recovery for a sample is less than the lower cutoff.
RPD5	High relative percent difference (RPD) observed between replicate and parent sample. The reported result may be imprecise.
SURR7	The Surrogate recovery is less than the lower control limit but greater than the lower Surrogate cutoff.
SURR9	The Surrogate recovery exceeds the upper control limit.
TBH	Contamination detected in the Trip Blank greater than or equal to the Quantitation Limit.

Qualifiers	Qualifier Descriptions
B	Detections found in the method blank
E	Exceeds upper calibration level.
J	Estimated value
J+	Estimated value, with high bias
J-	Estimated value, with low bias
R	Rejected
U	Not Detected
UJ	Not Detected, Limit is estimated.
X	Data should be excluded

Notes:
DSCR = Defense Supply Center Richmond
FR = fraction
N = organic or not applicable , T = total
µg/L = micrograms per liter, mg/L = milligrams per liter
RDL = reporting detection limit

Data Qualification Validation Report - Labratory Control Samples
OU6 Spring 2024 Annual Monitoring
Defense Supply Center Richmond

Facility:	DSCR
Event ID:	DSCR_FY24_OU6_Annual
Created By:	NA\JonesA10
Created Date:	7/18/2024 12:37:00 PM
Checks:	Dilution Factor, Estimated results, Field Blank Contamination, Field Duplicate RPD, HTT-2, HTT-3, HTT-4 Lab Blank Contamination, Preservative, Relative Percent Difference (RPD), Spike Recovery - Multiple Rules Surrogate Recovery, Trip Blank Contamination, Verify Sample Units

Sample Code	Location	Sample Date	Method	FR	Analyte	Result	Unit	RDL	Qual	Reason Code

Reason Codes	Reason Code Descriptions
EBH	Analytes detected in the Equipment Blank greater than or equal to the Quantitation Limit.
ER1	The reported inorganic result is greater than/equal to the MDL and less than the RDL or QL; it should be considered an estimated value.
NC	No code applied
ER2	The reported organic result is greater than/equal to the MDL and less than the RDL or QL; it should be considered an estimated value.
SURR1	Associated Detected result of a Surrogate Recovery less than the lower control limit but greater than the lower Surrogate cutoff.
SURR3	Associated Detected result of a Surrogate recovery exceeding the upper control limt.
LBH	Contamination detected in the Lab Blank greater than or equal to the Quantitation Limit.
LCSH	The LCS recovery exceeds the upper control limit.
MSDH	The Matrix Spike Duplicate recovery for a sample exceeds the upper cutoff limit.
RPD3	High relative percent difference (RPD) observed between MS/MSD. The reported result may be imprecise.
MSH	The Matrix Spike recovery for a sample exceeds the upper control limit.
LCSL	The LCS recovery is less than the lower control limit but greater than the lower cutoff.
SURR4	Associated ND result of a Surrogate recovery less than the lower control limit but greater than the lower Surrogate cutoff.
MSDL	The Matrix Spike Duplicate Recovery for a sample is less than lower control limit but greater than the the lower cutoff.
MSDLCO	The Matrix Spike Duplicate recovery for a sample is less than the lower cutoff.
MSL	The Matrix Spike recovery for a sample is less than lower control limit but greater than the the lower cutoff.
MSLCO	The Matrix Spike recovery for a sample is less than the lower cutoff.
RPD5	High relative percent difference (RPD) observed between replicate and parent sample. The reported result may be imprecise.
SURR7	The Surrogate recovery is less than the lower control limit but greater than the lower Surrogate cutoff.
SURR9	The Surrogate recovery exceeds the upper control limit.
TBH	Contamination detected in the Trip Blank greater than or equal to the Quantitation Limit.

Qualifiers	Qualifier Descriptions
B	Detections found in the method blank
E	Exceeds upper calibration level.
J	Estimated value
J+	Estimated value, with high bias
J-	Estimated value, with low bias
R	Rejected
U	Not Detected
UJ	Not Detected, Limit is estimated.
X	Data should be excluded

Notes:
DSCR = Defense Supply Center Richmond
FR = fraction
N = organic or not applicable , T = total
µg/L = micrograms per liter, mg/L = milligrams per liter
RDL = reporting detection limit

WASTE CHARACTERIZATION

WASTE NAME AND DESCRIPTION — **PHYSICAL STATE**

1. Soil Cuttings — SOLID X — LIQUID / SLUDGE _____

BULK LOAD WEIGHT / TONS _____ **CONTAINERS** TYPE _____ QUANTITY _____

2. _____ — SOLID _____ — LIQUID / SLUDGE _____

BULK LOAD WEIGHT / TONS _____ **CONTAINERS** TYPE _____ QUANTITY _____

ADDITIONAL INFORMATION
Approval Code: 05436

GENERATOR'S CERTIFICATION

I hereby certify, to the best of my knowledge, that the materials characterized above are not classified as listed or characteristic hazardous waste as regulated by the Commonwealth of Virginia, the state of origin, or Federal Regulations. All containers have been properly marked / labeled and are in proper condition for transport according to all DOT and government regulations.

Generator / Agent's Printed Name	Signature	Date
[illegible]	[signature]	4-20-23

TRANSPORTER

TRANSPORTER NAME Clearfield MMG, Inc. TELEPHONE 757-549-8448 TRUCK NO. _____

I certify that the materials described above were received by me for shipment and delivered to the designated facility.

Transporter's Signature	Date
[signature]	4-20-23

FACILITY

I certify that the materials described above were delivered to the facility and received by me.

DESIGNATED FACILITY: Chesapeake Facility, 3900 Shannon Street

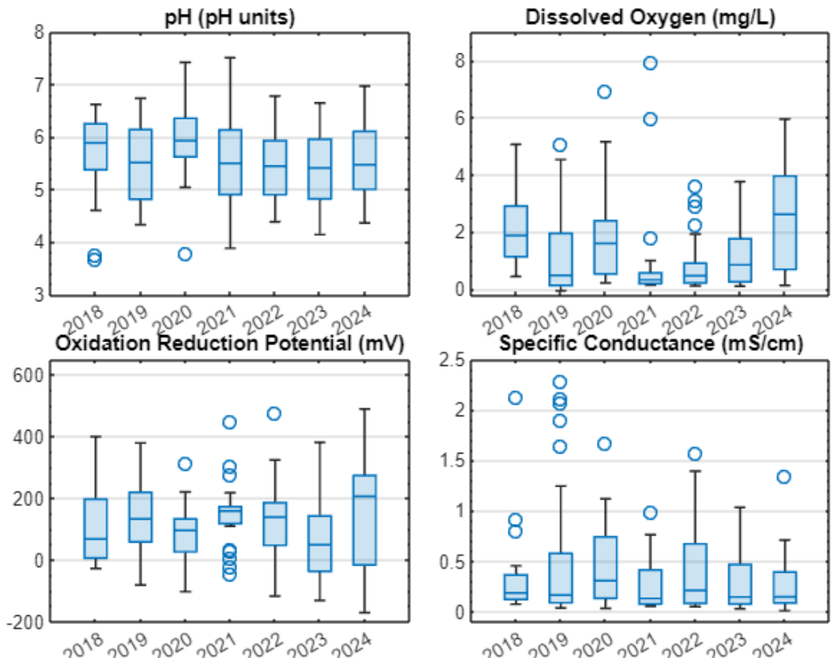
1.1 Distribution Box Plots Annual (Surficial Aquifer: Northern Area) 3
2.1 Water Quality Parameter Summary Tables 4
pH Annual Northern Area (Surficial Aquifer) 4
pH Annual Southern Area (Surficial Aquifer) 4
1.1 Distribution Box Plots Annual (Surficial Aquifer: Southern Area) 5
DO Annual Northern Area (Surficial Aquifer) 6
DO Annual Southern Area (Surficial Aquifer) 7
ORP Annual Northern Area (Surficial Aquifer) 7
ORP Event Southern Area (Surficial Aquifer) 8
Specific Conductance Annual Northern Area (Surficial Aquifer) 8
Specific Conductance Event Southern Area (Surficial Aquifer) 8
Temperature Annual Northern Area (Surficial Aquifer) 9
Temperature Annual Southern Area (Surficial Aquifer) 9
2.0 Geochemical Parameters 10
2.1 Geochemical Box Plots - Annual (Surficial Aquifer: Northern Area) 10
2.2 Geochemical Box Plots - Annual (Surficial Aquifer: Southern Area) 12
2.2 Summary Tables 15
Chloride Annual Northern Area (Surficial Aquifer) 15
Chloride Annual Southern Area (Surficial Aquifer) 16
Nitrate Annual Northern Area (Surficial Aquifer) 16
Nitrate Annual Southern Area (Surficial Aquifer) 16
Sulfate Annual Northern Area (Surficial Aquifer) 17
Sulfate Annual Southern Area (Surficial Aquifer) 17
Sulfide Annual Northern Area (Surficial Aquifer) 18
Sulfide Annual Southern Area (Surficial Aquifer) 18
Sulfide as Hydrogen Sulfide Annual Northern Area (Surficial Aquifer) 19
Sulfide as Hydrogen Sulfide Annual Southern Area (Surficial Aquifer) 19
Ferrous Iron Annual Northern Area (Surficial Aquifer) 20
Ferrous Iron Annual Southern Area (Surficial Aquifer) 20
Manganese Annual Northern Area (Surficial Aquifer) 21
Manganese Annual Southern Area (Surficial Aquifer) 21
Alkalinity Annual Northern Area (Surficial Aquifer) 21
Alkalinity Annual Southern Area (Surficial Aquifer) 22
Carbon Dioxide Annual Northern Area (Surficial Aquifer) 22
Carbon Dioxide Annual Southern Area (Surficial Aquifer) 23
Ethene Annual Northern Area (Surficial Aquifer) 23
Ethene Annual Southern Area (Surficial Aquifer) 24
Ethane Annual Northern Area (Surficial Aquifer) 24
Ethane Annual Southern Area (Surficial Aquifer) 25
Methane Annual Northern Area (Surficial Aquifer) 25
Methane Annual Southern Area (Surficial Aquifer) 25
Total Organic Carbon Annual Northern Area (Surficial Aquifer) 26
Total Organic Carbon Annual Southern Area (Surficial Aquifer) 26
3.0 VOCs 27



3.1 VOC Box Plots Annual Northern Area (Surficial Aquifer) 27
3.1 VOC Box Plots Annual Southern Area (Surficial Aquifer) 28
3.3 VOC Summary Tables 30
Tetrachloroethene Annual Northern Area (Surficial) 30
Tetrachloroethene Annual Northern Area (Surficial) 31
Tetrachloroethene Annual Southern Area (Surficial Aquifer) 31
Trichloroethene Annual Northern Area (Surficial Aquifer) 32
Trichloroethene Annual Southern Area (Surficial Aquifer) 32
cis-1,2-dichloroethene Annual Northern Area (Surficial Aquifer) 33
cis-1,2-dichloroethene Annual Southern Area (Surficial Aquifer) 33
Vinyl Chloride Annual Northern Area (Surficial Aquifer) 34
Vinyl Chloride Annual Southern Area (Surficial Aquifer) 34
1,1-Dichloroethene Annual Northern Area (Surficial Aquifer) 34
1,1-Dichloroethene Annual Southern Area (Surficial Aquifer) 35
Methylene Chloride Annual Northern Area (Surficial Aquifer) 35
Methylene Chloride Annual Southern Area (Surficial Aquifer) 36
Benzene Annual Northern Area (Surficial Aquifer) 36
Benzene Annual Southern Area (Surficial Aquifer) 37
1,2-Dichloroethane Annual Northern Area (Surficial Aquifer) 37
1,2-Dichloroethane Annual Southern Area (Surficial Aquifer) 38
1,1,2-Trichloroethane Annual Northern Area (Surficial Aquifer) 38
1,1,2-Trichloroethane Annual Southern Area (Surficial Aquifer) 39
1,4-Dichlorobenzene Annual Northern Area (Surficial Aquifer) 39
1,4-Dichlorobenzene Annual Southern Area (Surficial Aquifer) 40
Chlorobenzene Annual Northern Area (Surficial Aquifer) 40
Chlorobenzene Annual Southern Area (Surficial Aquifer) 40
4.0 Descriptive Statistics Time Series Plots for VOCs 41
4.1 Descriptive Statistics Time Series Plots for Surficial Aquifer: Northern Area 41
PCE Northern Area: Surficial Aquifer 41
Correlation Analysis for Frequency of Detection (Surficial Aquifer - Northern Area) 43
Mann-Kendal Trend Analysis (Surficial Aquifer - Northern Area) 45
Mann-Kendall Trend Analysis PCE Bulk Plume 45
Mann-Trend Analysis TCE Bulk Plume 46
Mann-Trend Analysis cDCE Bulk Plume 46
Mann-Trend Analysis VC Bulk Plume 47
4.2 Descriptive Statistics Time Series Plots for Surficial Aquifer: Southern Area 48
Correlation Analysis for Frequency of Detection (Surficial Aquifer - Southern Area) 50
Mann-Trend Analysis PCE Bulk Plume 51
Mann-Trend Analysis TCE Bulk Plume 52
Mann-Trend Analysis cDCE Bulk Plume 53
Mann-Trend Analysis VC Bulk Plume 54
Correlation Analysis for Distribution Parameters (Surficial Aquifer - Southern Area) 55
4.0 Descriptive Statistics Time Series Plots for Dissolved Gases 55
4.1 Descriptive Statistics Time Series Ethene Plot 55
5.0 Descriptive Statistics Time Series Plots for TOC 61
5.0 Trend Analysis and Statistics 63
5.1 TOC SSA Trend Analysis 63
5.1.1 Maximum Concentration Trend 63
5.1.2 Mean Concentration Trend 64
5.1.3 No. Samples =>20 mg/L Trend 65
5.1.4 Correlation Analysis 66
Standard Color Ramp 66

Mann-Kendall (M-K) Trend Analysis

The Mann-Kendall (M-K) tests detect monotonic trends in data. M-K tests allow for missing values, do not require a particular distribution assumption, and can accommodate trace reported values and left censored data (non-detect).

Original Form

The original form of the M-K test (two-way) evaluates the null hypothesis of no trend (H0) vs. an alternative hypothesis (HA) of trend at a significance level of 5% (0.05).[1] A test result of H=0 indicates no trend with a result of H =1 indicate a trend. In null hypothesis statistical testing, the probability value (p-value) of statistical test is the probability, under the null hypothesis, of obtaining a value of the test statistic as extreme or more extreme than the value computed from the sample. Typically, a p-value quantifies the statistical significance of the result equal less than the significant level. In a significance test, the null hypothesis H0 is rejected if the p-value is less than or equal to a predefined threshold value of significance (alpha). The original form does not compute trends where the distribution has NaN (missing) data observations.

[1]Mann, H. B. (1945), Nonparametric tests against trend, Econometrica, 13, 245– 259. Kendall, M. G. (1975), Rank Correlation Methods, Griffin, London. MATLAB Code written by: Simone Fatichi -- simonef@dicea.unifi.it Copyright 2009, Date: 2009/10/03

Mann-Kendall with Missing Values and Same Values

This form of the M-K test (two-way) accounts for NaN (missing values) and tied values following the method described in Gilbert RO (1987) Statistical Methods for Environmental Pollution Monitoring pages 208-213. This test evaluates the null hypothesis of no trend (H0) vs. an alternative hypothesis (HA) of trend at a significance level of 5% (0.05) or alternative significance level.[2] A test result of H=0 indicates no trend with a result of H =1 indicate a trend. In null hypothesis statistical testing, the probability value (p-value) of statistical test is the probability, under the null hypothesis, of obtaining a value of the test statistic as extreme or more extreme than the value computed from the sample. Typically, a p-value quantifies the statistical significance of the result equal less than the significant level. In a significance test, the null hypothesis H0 is rejected if the p-value is less than or equal to a predefined threshold value of significance (alpha). This function outputs the Z statistic and standard deviation of the Mann-Kendall Statistic S. A positive (negative) value of Z indicates an upward (downward) trend.

[2]Taesam Lee (2024). Mann-Kendall with Missing Values and Same Values (https://www.mathworks.com/matlabcentral/fileexchange/70408-mann-kendall-with-missing-values-and-same-values), MATLAB Central File Exchange.

Cumulative Form for Alternative Hypothesis of Trend not zero, Trend is greater than zero, or Trend is less than zero

A cumulative form of the M-K test used in tfor data evaluations consists of one-way or two-way test that can evaluate an alternative hypothesis of trend not zero (two-way) trend greater than zero (one-way) or less than zero (one-way).[3] This test treats NaNs (missing values) in Q or pop as missing values, and removes them.

[3]Thorvaldsen, S. , Flå, T. and Willassen, N.P. (2010) DeltaProt: a software toolbox for comparative genomics. BMC Bioinformatics 2010, Vol 11:573. See http://www.biomedcentral.com/1471-2105/11/573

Sequential Test for Potential Trend Change Points

A sequential version of the Mann-Kendall test statistic allows detection of the approximate beginning of a developing trend. When the progressive series (original time series) and retrograde (backward sequential time series) curves are plotted, the intersection of the curves locates an approximate potential trend turning point. If the intersection of the curves occurs within +/- 1.96 (5% level) of the standardized statistic, a detectable change at that point in the time series can be inferred.[4]

Detection of approximate potential trend turning points in temperature time series (1941–2010) for Asansol Weather Observation Station, West Bengal, India. India. Atmospheric and Climate Sciences, 4, pp.64-69. MATLAB Code written by Pankaj Dey, PhD scholar, Department of Civil Engineering,Indian Institute of Science, Bangalore.

Singular Spectrum Analysis (SAA)

SSA is a spectrum estimation method (non-parametric) to analyze time series data for trend and forecasting. SAA assumes the additive decomposition of the data into long-term (LT) trend, oscillatory or seasonal trend or trends, and remainder or random. The SAA function[5] used for the data evaluation solves for LT without decomposition of seasonal or remainder components given the mostly annual frequency of sampling.

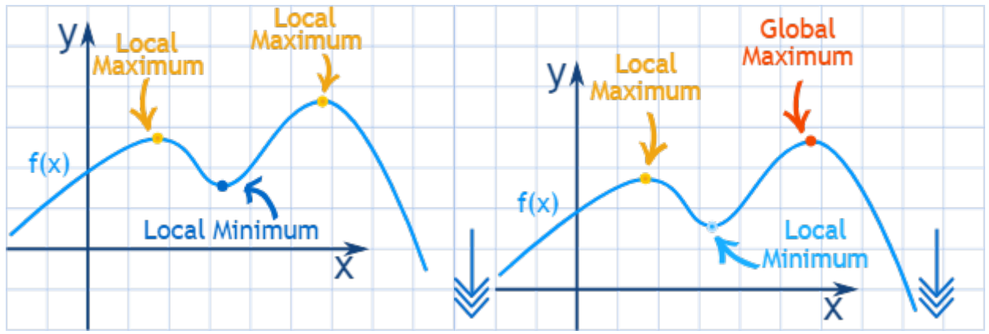
1.0 Data Evaluation Methods

Normal Distribution - Lillifors Test

The Lilliefors test used as the hypothesis test evaluated whether the data distribution comes from a distribution in the normal family, against the alternative that it does not come from a normal distribution.



Coefficient of Variation

Coefficient of variation (CV) of a time series data set is the ratio of standard deviation and mean. CV provides a measure of variability of time series data.

Linear Correlation (Pearson's Linear Correlation Coefficient)

Correlation quantifies the strength of a linear relationship between two variables. When there is no correlation between two variables, then there is no tendency for the values of the variables to increase or decrease together. . Values of the correlation coefficient can range from –1 to +1. A value of –1 indicates perfect negative correlation, while a value of +1 indicates perfect positive correlation. A value of 0 indicates no correlation between the sets of data observations. The analysis also tests the null hypothesis of no correlation against an alternative hypothesis for positive, negative, or nonzero correlation at a significance of 5 percent (%) or alpha (α) of 0.05. A calculated probability value (p-value) <0.05 rejects the null hypothesis of no correlation indicating the correlation is significantly positive, negative, or different than 0.

Maxima and Minima

A local maximum is is:f(a) ≥ f(x) for all x in the interval. The prominence of a local maximum (or peak) measures how the peak stands out with respect to its height and location relative to other peaks. A local **minimum** is:f(a) ≤ f(x) for all x in the interval. The prominence of a local minimum (or valley) measures how the valley stands out with respect to its depth and location relative to other valleys. Global maximum and minimum represent the maximum and minimum for the entire function or data set.

Mann-Kendall (M-K) Trend Analysis

The Mann-Kendall (M-K) tests detect monotonic trends in data. M-K tests allow for missing values, do not require a particular distribution assumption, and can accommodate trace reported values and left censored data (non-detect).

Original Form

The original form of the M-K test (two-way) evaluates the null hypothesis of no trend (H0) vs. an alternative hypothesis (HA) of trend at a significance level of 5% (0.05).[1] A test result of H=0 indicates no trend with a result of H =1 indicate a trend. In null hypothesis statistical testing, the probability value (p-value) of statistical test is the probability, under the null hypothesis, of obtaining a value of the test statistic as extreme or more extreme than the value computed from the sample. Typically, a p-value quantifies the statistical significance of the result equal less than the significant level. In a significance test, the null hypothesis H0 is rejected if the p-value is less than or equal to a predefined threshold value of significance (alpha). The original form does not compute trends where the distribution has NaN (missing) data observations.

[1]Mann, H. B. (1945), Nonparametric tests against trend, Econometrica, 13, 245– 259. Kendall, M. G. (1975), Rank Correlation Methods, Griffin, London. MATLAB Code written by: Simone Fatichi -- simonef@dicea.unifi.it Copyright 2009, Date: 2009/10/03

Mann-Kendall with Missing Values and Same Values

This form of the M-K test (two-way) accounts for NaN (missing values) and tied values following the method described in Gilbert RO (1987) Statistical Methods for Environmental Pollution Monitoring pages 208-213. This test evaluates the null hypothesis of no trend (H0) vs. an alternative hypothesis (HA) of trend at a significance level of 5% (0.05) or alternative significance level.[2] A test result of H=0 indicates no trend with a result of H =1 indicate a trend. In null hypothesis statistical testing, the probability value (p-value) of statistical test is the probability, under the null hypothesis, of obtaining a value of the test statistic as extreme or more extreme than the value computed from the sample.

Typically, a p-value quantifies the statistical significance of the result equal less than the significant level. In a significance test, the null hypothesis H0 is rejected if the p-value is less than or equal to a predefined threshold value of significance (alpha). This function outputs the Z statistic and standard deviation of the Mann-Kendall Statistic S. A positive (negative) value of Z indicates an upward (downward) trend.

[2]Taesam Lee (2024). Mann-Kendall with Missing Values and Same Values (https://www.mathworks.com/matlabcentral/fileexchange/70408-mann-kendall-with-missing-values-and-same-values), MATLAB Central File Exchange.

Cumulative Form for Alternative Hypothesis of Trend not zero, Trend is greater than zero, or Trend is less than zero

A cumulative form of the M-K test used in tfor data evaluations consists of one-way or two-way test that can evaluate an alternative hypothesis of trend not zero (two-way) trend greater than zero (one-way) or less than zero (one-way).[3] This test treats NaNs (missing values) in Q or pop as missing values, and removes them.

Sequential Test for Potential Trend Change Points

A sequential version of the Mann-Kendall test statistic allows detection of the approximate beginning of a developing trend. When the progressive series (original time series) and retrograde (backward sequential time series) curves are plotted, the intersection of the curves locates an approximate potential trend turning point. If the intersection of the curves occurs within +/- 1.96 (5% level) of the standardized statistic, a detectable change at that point in the time series can be inferred.[4]

Detection of approximate potential trend turning points in temperature time series (1941–2010) for Asansol Weather Observation Station, West Bengal, India. India. Atmospheric and Climate Sciences, 4, pp.64-69. MATLAB Code written by Pankaj Dey, PhD scholar, Department of Civil Engineering,Indian Institute of Science, Bangalore.

Singular Spectrum Analysis (SSA)

SSA is a spectrum estimation method (non-parametric) to analyze time series data for trend and forecasting. SAA assumes the additive decomposition of the data into long-term (LT) trend, oscillatory or seasonal trend or trends, and remainder or random. The SAA function[5] used for the data evaluation solves for LT without decomposition of seasonal or remainder components given the mostly annual frequency of sampling.

[5]Singular Spectrum Analysis function using MATLAB 2024a.

Coefficient of Variation

Coefficient of variation (CV) of a time series data set is the ratio of standard deviation and mean. CV provides a measure of variability of time series data.

Coefficient of Variation	Variance
<0.50	Low
0.5 to 1.0	Moderate
>1.0	High

```
CVMW129PCE=std(MW129.PCE,'omitmissing')/mean(MW129.PCE,'omitmissing'),...

Coefficient of Variation

Coefficient of variation (CV) of a time series data set is the ratio of standard deviation and mean. CV provides a measure of variability of time series data.

Coefficient of Variation	Variance
<0.50	Low
0.5 to 1.0	Moderate
>1.0	High

```

Coefficient of Variation

Coefficient of variation (CV) of a time series data set is the ratio of standard deviation and mean. CV provides a measure of variability of time series data.

Coefficient of Variation	Variance
<0.50	Low
0.5 to 1.0	Moderate
>1.0	High

```
CVMW238PCE=std(MW238.PCE,'omitmissing')/mean(MW238.PCE,'omitmissing'),...

Coefficient of Variation

Coefficient of variation (CV) of a time series data set is the ratio of standard deviation and mean. CV provides a measure of variability of time series data.

Coefficient of Variation	Variance
<0.50	Low

0.5 to 1.0	Moderate
>1.0	High

```

Coefficient of Variation

Coefficient of variation (CV) of a time series data set is the ratio of standard deviation and mean. CV provides a measure of variability of time series data.

Coefficient of Variation	Variance
<0.50	Low
0.5 to 1.0	Moderate
>1.0	High

```
CVMW242PCE=std(MW242.PCE,'omitmissing')/mean(MW242.PCE,'omitmissing'),...

Coefficient of Variation

Coefficient of variation (CV) of a time series data set is the ratio of standard deviation and mean. CV provides a measure of variability of time series data.

Coefficient of Variation	Variance
<0.50	Low
0.5 to 1.0	Moderate
>1.0	High

```
CVMW245PCE=std(MW245.PCE,'omitmissing')/mean(MW245.PCE,'omitmissing'),...

Coefficient of Variation

Coefficient of variation (CV) of a time series data set is the ratio of standard deviation and mean. CV provides a measure of variability of time series data.

Coefficient of Variation	Variance
<0.50	Low
0.5 to 1.0	Moderate
>1.0	High

```
CVMW245PCE=std(MW245.PCE,'omitmissing')/mean(MW245.PCE,'omitmissing'),...

Coefficient of Variation

Coefficient of variation (CV) of a time series data set is the ratio of standard deviation and mean. CV provides a measure of variability of time series data.

Coefficient of Variation	Variance
<0.50	Low
0.5 to 1.0	Moderate
>1.0	High

```
CVMW247PCE=std(MW247.PCE,'omitmissing')/mean(MW247.PCE,'omitmissing'),...

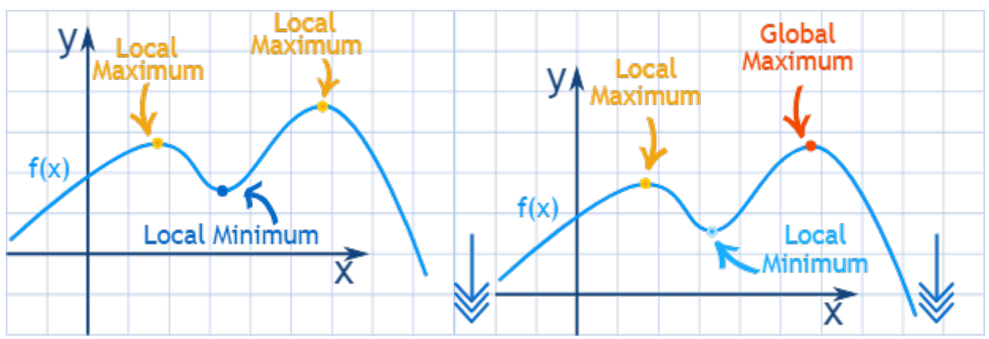
1.0 Data Evaluation Methods

Normal Distribution - Lillifors Test

The Lilliefors test used as the hypothesis test evaluated whether the data distribution comes from a distribution in the normal family, against the alternative that it does not come from a normal distribution.



Coefficient of Variation

Coefficient of variation (CV) of a time series data set is the ratio of standard deviation and mean. CV provides a measure of variability of time series data.

Linear Correlation (Pearson's Linear Correlation Coefficient)

Correlation quantifies the strength of a linear relationship between two variables. When there is no correlation between two variables, then there is no tendency for the values of the variables to increase or decrease together. . Values of the correlation coefficient can range from –1 to +1. A value of –1 indicates perfect negative correlation, while a value of +1 indicates perfect positive correlation. A value of 0 indicates no correlation between the sets of data observations. The analysis also tests the null hypothesis of no correlation against an alternative hypothesis for positive, negative, or nonzero correlation at a significance of 5 percent (%) or alpha (α) of 0.05. A calculated probability value (p-value) <0.05 rejects the null hypothesis of no correlation indicating the correlation is significantly positive, negative, or different than 0.

Maxima and Minima

A local maximum is is:f(a) ≥ f(x) for all x in the interval. The prominence of a local maximum (or peak) measures how the peak stands out with respect to its height and location relative to other peaks. A local **minimum** is:f(a) ≤ f(x) for all x in the interval. The prominence of a local minimum (or valley) measures how the valley stands out with respect to its depth and location relative to other valleys. Global maximum and minimum represent the maximum and minimum for the entire function or data set.

Mann-Kendall (M-K) Trend Analysis

The Mann-Kendall (M-K) tests detect monotonic trends in data. M-K tests allow for missing values, do not require a particular distribution assumption, and can accommodate trace reported values and left censored data (non-detect).

Original Form

The original form of the M-K test (two-way) evaluates the null hypothesis of no trend (H0) vs. an alternative hypothesis (HA) of trend at a significance level of 5% (0.05).[1] A test result of H=0 indicates no trend with a result of H =1 indicate a trend. In null hypothesis statistical testing, the probability value (p-value) of statistical test is the probability, under the null hypothesis, of obtaining a value of the test statistic as extreme or more extreme than the value computed from the sample. Typically, a p-value quantifies the statistical significance of the result equal less than the significant level. In a significance test, the null hypothesis H0 is rejected if the p-value is less than or equal to a predefined threshold value of significance (alpha). The original form does not compute trends where the distribution has NaN (missing) data observations.

[1]Mann, H. B. (1945), Nonparametric tests against trend, Econometrica, 13, 245– 259. Kendall, M. G. (1975), Rank Correlation Methods, Griffin, London. MATLAB Code written by: Simone Fatichi -- simonef@dicea.unifi.it Copyright 2009, Date: 2009/10/03

Mann-Kendall with Missing Values and Same Values

This form of the M-K test (two-way) accounts for NaN (missing values) and tied values following the method described in Gilbert RO (1987) Statistical Methods for Environmental Pollution Monitoring pages 208-213. This test evaluates the null hypothesis of no trend (H0) vs. an alternative hypothesis (HA) of trend at a significance level of 5% (0.05) or alternative significance level.[2] A test result of H=0 indicates no trend with a result of H =1 indicate a trend. In null hypothesis statistical testing, the probability value (p-value) of statistical test is the probability, under the null hypothesis, of obtaining a value of the test statistic as extreme or more extreme than the value computed from the sample. Typically, a p-value quantifies the statistical significance of the result equal less than the significant level. In a significance test, the null hypothesis H0 is rejected if the p-value is less than or equal to a predefined threshold value of significance (alpha). This function outputs the Z statistic and standard deviation of the Mann-Kendall Statistic S. A positive (negative) value of Z indicates an upward (downward) trend.

[2]Taesam Lee (2024). Mann-Kendall with Missing Values and Same Values (https://www.mathworks.com/matlabcentral/fileexchange/70408-mann-kendall-with-missing-values-and-same-values), MATLAB Central File Exchange.

Cumulative Form for Alternative Hypothesis of Trend not zero, Trend is greater than zero, or Trend is less than zero

A cumulative form of the M-K test used in tfor data evaluations consists of one-way or two-way test that can evaluate an alternative hypothesis of trend not zero (two-way) trend greater than zero (one-way) or less than zero (one-way).[3] This test treats NaNs (missing values) in Q or pop as missing values, and removes them.

[3]Thorvaldsen, S. , Flå, T. and Willassen, N.P. (2010) DeltaProt: a software toolbox for comparative genomics. BMC Bioinformatics 2010, Vol 11:573. See http://www.biomedcentral.com/1471-2105/11/573

Sequential Test for Potential Trend Change Points

A sequential version of the Mann-Kendall test statistic allows detection of the approximate beginning of a developing trend. When the progressive series (original time series) and retrograde (backward sequential time series) curves are plotted, the intersection of the curves locates an approximate potential trend turning point. If the intersection of the curves occurs within +/- 1.96 (5% level) of the standardized statistic, a detectable change at that point in the time series can be inferred.[4]

Detection of approximate potential trend turning points in temperature time series (1941–2010) for Asansol Weather Observation Station, West Bengal, India. India. Atmospheric and Climate Sciences, 4, pp.64-69. MATLAB Code written by Pankaj Dey, PhD scholar, Department of Civil Engineering,Indian Institute of Science, Bangalore.

Singular Spectrum Analysis (SSA)

SSA is a spectrum estimation method (non-parametric) to analyze time series data for trend and forecasting. SAA assumes the additive decomposition of the data into long-term (LT) trend, oscillatory or seasonal trend or trends, and remainder or random. The SAA function[5] used for the data evaluation solves for LT without decomposition of seasonal or remainder components given the mostly annual frequency of sampling.

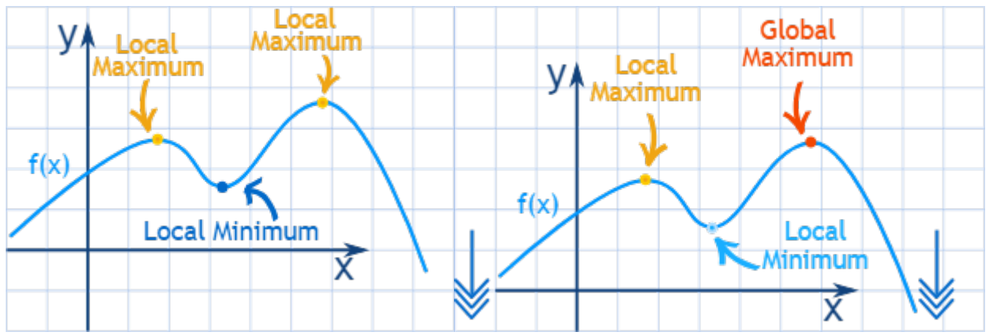
1.0 Data Evaluation Methods

Normal Distribution - Lillifors Test

The Lilliefors test used as the hypothesis test evaluated whether the data distribution comes from a distribution in the normal family, against the alternative that it does not come from a normal distribution.



Coefficient of Variation

Coefficient of variation (CV) of a time series data set is the ratio of standard deviation and mean. CV provides a measure of variability of time series data.

Linear Correlation (Pearson's Linear Correlation Coefficient)

Correlation quantifies the strength of a linear relationship between two variables. When there is no correlation between two variables, then there is no tendency for the values of the variables to increase or decrease together. . Values of the correlation coefficient can range from –1 to +1. A value of –1 indicates perfect negative correlation, while a value of +1 indicates perfect positive correlation. A value of 0 indicates no correlation between the sets of data observations. The analysis also tests the null hypothesis of no correlation against an alternative hypothesis for positive, negative, or nonzero correlation at a significance of 5 percent (%) or alpha (α) of 0.05. A calculated probability value (p-value) <0.05 rejects the null hypothesis of no correlation indicating the correlation is significantly positive, negative, or different than 0.

Maxima and Minima

A local maximum is is:f(a) ≥ f(x) for all x in the interval. The prominence of a local maximum (or peak) measures how the peak stands out with respect to its height and location relative to other peaks. A local **minimum** is:f(a) ≤ f(x) for all x in the interval. The prominence of a local minimum (or valley) measures how the valley stands out with respect to its depth and location relative to other valleys. Global maximum and minimum represent the maximum and minimum for the entire function or data set.

Mann-Kendall (M-K) Trend Analysis

The Mann-Kendall (M-K) tests detect monotonic trends in data. M-K tests allow for missing values, do not require a particular distribution assumption, and can accommodate trace reported values and left censored data (non-detect).

Original Form

The original form of the M-K test (two-way) evaluates the null hypothesis of no trend (H0) vs. an alternative hypothesis (HA) of trend at a significance level of 5% (0.05).[1] A test result of H=0 indicates no trend with a result of H =1 indicate a trend. In null hypothesis statistical testing, the probability value (p-value) of statistical test is the probability, under the null hypothesis, of obtaining a value of the test statistic as extreme or more extreme than the value computed from the sample. Typically, a p-value quantifies the statistical significance of the result equal less than the significant level. In a significance test, the null hypothesis H0 is rejected if the p-value is less than or equal to a predefined threshold value of significance (alpha). The original form does not compute trends where the distribution has NaN (missing) data observations.

[1]Mann, H. B. (1945), Nonparametric tests against trend, Econometrica, 13, 245– 259. Kendall, M. G. (1975), Rank Correlation Methods, Griffin, London. MATLAB Code written by: Simone Fatichi -- simonef@dicea.unifi.it Copyright 2009, Date: 2009/10/03

Mann-Kendall with Missing Values and Same Values

This form of the M-K test (two-way) accounts for NaN (missing values) and tied values following the method described in Gilbert RO (1987) Statistical Methods for Environmental Pollution Monitoring pages 208-213. This test evaluates the null hypothesis of no trend (H0) vs. an alternative hypothesis (HA) of trend at a significance level of 5% (0.05) or alternative significance level.[2] A test result of H=0 indicates no trend with a result of H =1 indicate a trend. In null hypothesis statistical testing, the probability value (p-value) of statistical test is the probability, under the null hypothesis, of obtaining a value of the test statistic as extreme or more extreme than the value computed from the sample. Typically, a p-value quantifies the statistical significance of the result equal less than the significant level. In a significance test, the null hypothesis H0 is rejected if the p-value is less than or equal to a predefined threshold value of significance (alpha). This function outputs the Z statistic and standard deviation of the Mann-Kendall Statistic S. A positive (negative) value of Z indicates an upward (downward) trend.

[2]Taesam Lee (2024). Mann-Kendall with Missing Values and Same Values (https://www.mathworks.com/matlabcentral/fileexchange/70408-mann-kendall-with-missing-values-and-same-values), MATLAB Central File Exchange.

Cumulative Form for Alternative Hypothesis of Trend not zero, Trend is greater than zero, or Trend is less than zero

A cumulative form of the M-K test used in tfor data evaluations consists of one-way or two-way test that can evaluate an alternative hypothesis of trend not zero (two-way) trend greater than zero (one-way) or less than zero (one-way).[3] This test treats NaNs (missing values) in Q or pop as missing values, and removes them.

[3]Thorvaldsen, S. , Flå, T. and Willassen, N.P. (2010) DeltaProt: a software toolbox for comparative genomics. BMC Bioinformatics 2010, Vol 11:573. See http://www.biomedcentral.com/1471-2105/11/573

Sequential Test for Potential Trend Change Points

A sequential version of the Mann-Kendall test statistic allows detection of the approximate beginning of a developing trend. When the progressive series (original time series) and retrograde (backward sequential time series) curves are plotted, the intersection of the curves locates an approximate potential trend turning point. If the intersection of the curves occurs within +/- 1.96 (5% level) of the standardized statistic, a detectable change at that point in the time series can be inferred.[4]

[4] Reference: Chatterjee, S., Bisai, D. and Khan, A., 2014. Detection of approximate potential trend turning points in temperature time series (1941–2010) for Asansol Weather Observation Station, West Bengal, India. India. Atmospheric and Climate Sciences, 4, pp.64-69. MATLAB Code written by Pankaj Dey, PhD scholar, Department of Civil Engineering,Indian Institute of Science, Bangalore.

Singular Spectrum Analysis (SSA)

SSA is a spectrum estimation method (non-parametric) to analyze time series data for trend and forecasting. SAA assumes the additive decomposition of the data into long-term (LT) trend, oscillatory or seasonal trend or trends, and remainder or random. The SAA function[5] used for the data evaluation solves for LT without decomposition of seasonal or remainder components given the mostly annual frequency of sampling.

[5]Singular Spectrum Analysis function using MATLAB 2024a.

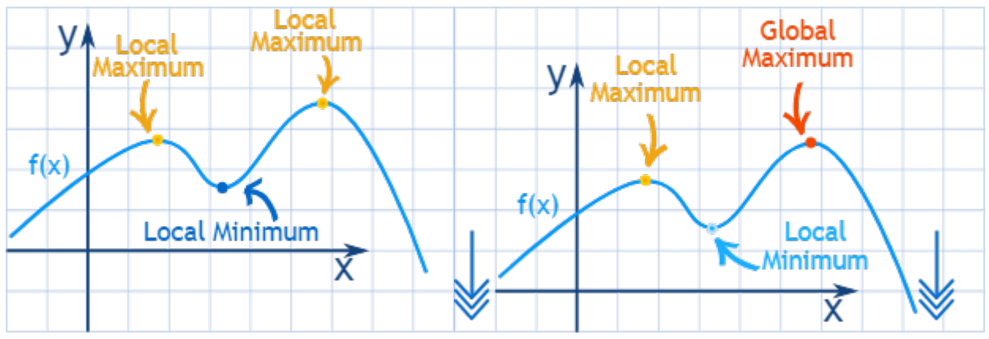
1.0 Data Evaluation Methods

Normal Distribution - Lillifors Test

The Lilliefors test used as the hypothesis test evaluated whether the data distribution comes from a distribution in the normal family, against the alternative that it does not come from a normal distribution.



Coefficient of Variation

Coefficient of variation (CV) of a time series data set is the ratio of standard deviation and mean. CV provides a measure of variability of time series data.

Linear Correlation (Pearson's Linear Correlation Coefficient)

Correlation quantifies the strength of a linear relationship between two variables. When there is no correlation between two variables, then there is no tendency for the values of the variables to increase or decrease together. . Values of the correlation coefficient can range from –1 to +1. A value of –1 indicates perfect negative correlation, while a value of +1 indicates perfect positive correlation. A value of 0 indicates no correlation between the sets of data observations. The analysis also tests the null hypothesis of no correlation against an alternative hypothesis for positive, negative, or nonzero correlation at a significance of 5 percent (%) or alpha (α) of 0.05. A calculated probability value (p-value) <0.05 rejects the null hypothesis of no correlation indicating the correlation is significantly positive, negative, or different than 0.

Maxima and Minima

A local maximum is is:f(a) ≥ f(x) for all x in the interval. The prominence of a local maximum (or peak) measures how the peak stands out with respect to its height and location relative to other peaks. A local **minimum** is:f(a) ≤ f(x) for all x in the interval. The prominence of a local minimum (or valley) measures how the valley stands out with respect to its depth and location relative to other valleys. Global maximum and minimum represent the maximum and minimum for the entire function or data set.

Mann-Kendall (M-K) Trend Analysis

The Mann-Kendall (M-K) tests detect monotonic trends in data. M-K tests allow for missing values, do not require a particular distribution assumption, and can accommodate trace reported values and left censored data (non-detect).

Original Form

The original form of the M-K test (two-way) evaluates the null hypothesis of no trend (H0) vs. an alternative hypothesis (HA) of trend at a significance level of 5% (0.05).[1] A test result of H=0 indicates no trend with a result of H =1 indicate a trend. In null hypothesis statistical testing, the probability value (p-value) of statistical test is the probability, under the null hypothesis, of obtaining a value of the test statistic as extreme or more extreme than the value computed from the sample. Typically, a p-value quantifies the statistical significance of the result equal less than the significant level. In a significance test, the null hypothesis H0 is rejected if the p-value is less than or equal to a predefined threshold value of significance (alpha). The original form does not compute trends where the distribution has NaN (missing) data observations.

[1]Mann, H. B. (1945), Nonparametric tests against trend, Econometrica, 13, 245– 259. Kendall, M. G. (1975), Rank Correlation Methods, Griffin, London. MATLAB Code written by: Simone Fatichi -- simonef@dicea.unifi.it Copyright 2009, Date: 2009/10/03

Mann-Kendall with Missing Values and Same Values

This form of the M-K test (two-way) accounts for NaN (missing values) and tied values following the method described in Gilbert RO (1987) Statistical Methods for Environmental Pollution Monitoring pages 208-213. This test evaluates the null hypothesis of no trend (H0) vs. an alternative hypothesis (HA) of trend at a significance level of 5% (0.05) or alternative significance level.[2] A test result of H=0 indicates no trend with a result of H =1 indicate a trend. In null hypothesis statistical testing, the probability value (p-value) of statistical test is the probability, under the null hypothesis, of obtaining a value of the test statistic as extreme or more extreme than the value computed from the sample. Typically, a p-value quantifies the statistical significance of the result equal less than the significant level. In a significance test, the null hypothesis H0 is rejected if the p-value is less than or equal to a predefined threshold value of significance (alpha). This function outputs the Z statistic and standard deviation of the Mann-Kendall Statistic S. A positive (negative) value of Z indicates an upward (downward) trend.

[2]Taesam Lee (2024). Mann-Kendall with Missing Values and Same Values (https://www.mathworks.com/matlabcentral/fileexchange/70408-mann-kendall-with-missing-values-and-same-values), MATLAB Central File Exchange.

Cumulative Form for Alternative Hypothesis of Trend not zero, Trend is greater than zero, or Trend is less than zero

A cumulative form of the M-K test used in tfor data evaluations consists of one-way or two-way test that can evaluate an alternative hypothesis of trend not zero (two-way) trend greater than zero (one-way) or less than zero (one-way).[3] This test treats NaNs (missing values) in Q or pop as missing values, and removes them.

[3]Thorvaldsen, S. , Flå, T. and Willassen, N.P. (2010) DeltaProt: a software toolbox for comparative genomics. BMC Bioinformatics 2010, Vol 11:573. See http://www.biomedcentral.com/1471-2105/11/573

Sequential Test for Potential Trend Change Points

A sequential version of the Mann-Kendall test statistic allows detection of the approximate beginning of a developing trend. When the progressive series (original time series) and retrograde (backward sequential time series) curves are plotted, the intersection of the curves locates an approximate potential trend turning point. If the intersection of the curves occurs within +/- 1.96 (5% level) of the standardized statistic, a detectable change at that point in the time series can be inferred.[4]

[4] Reference: Chatterjee, S., Bisai, D. and Khan, A., 2014. Detection of approximate potential trend turning points in temperature time series (1941–2010) for Asansol Weather Observation Station, West Bengal, India. India. Atmospheric and Climate Sciences, 4, pp.64-69. MATLAB Code written by Pankaj Dey, PhD scholar, Department of Civil Engineering,Indian Institute of Science, Bangalore.

Singular Spectrum Analysis (SSA)

SSA is a spectrum estimation method (non-parametric) to analyze time series data for trend and forecasting. SAA assumes the additive decomposition of the data into long-term (LT) trend, oscillatory or seasonal trend or trends, and remainder or random. The SAA function[5] used for the data evaluation solves for LT without decomposition of seasonal or remainder components given the mostly annual frequency of sampling.

[5]Singular Spectrum Analysis function using MATLAB 2024a.

Coefficient of Variation

Coefficient of variation (CV) of a time series data set is the ratio of standard deviation and mean. CV provides a measure of variability of time series data.

Coefficient of Variation	Variance
<0.50	Low
0.5 to 1.0	Moderate
>1.0	High

```
CVMW95TCE=std(MW95.TCE,'omitmissing')/mean(MW95.TCE,'omitmissing'),...
CVMW95cDCE=std(MW95.cDCE,'omitmissing')/mean(MW95.cDCE,'omitmissing'),...
CVMW95VC=std(MW95.VC,'omitmissing')/mean(MW95.VC,'omitmissing'),
```

```
CVMW95TCE =
0.5921
CVMW95cDCE =
0.7275
CVMW95VC =

Coefficient of Variation

Coefficient of variation (CV) of a time series data set is the ratio of standard deviation and mean. CV provides a measure of variability of time series data.

Coefficient of Variation	Variance
<0.50	Low
0.5 to 1.0	Moderate
>1.0	High

```
CVMW236TCE=std(MW236.TCE,'omitmissing')/mean(MW236.TCE,'omitmissing'),...
CVMW236cDCE=std(MW236.cDCE,'omitmissing')/mean(MW236.cDCE,'omitmissing'),...
CVMW239VC=std(MW236.VC,'omitmissing')/mean(MW236.VC,'omitmissing'),
```

Coefficient of Variation

Coefficient of variation (CV) of a time series data set is the ratio of standard deviation and mean. CV provides a measure of variability of time series data.

Coefficient of Variation	Variance
<0.50	Low
0.5 to 1.0	Moderate
>1.0	High

```
CVMW94PCE=std(MW94.PCE,'omitmissing')/mean(MW94.PCE,'omitmissing'),...
```

```

Coefficient of Variation

Coefficient of variation (CV) of a time series data set is the ratio of standard deviation and mean. CV provides a measure of variability of time series data.

Coefficient of Variation	Variance
<0.50	Low
0.5 to 1.0	Moderate
>1.0	High

```
CVMW157TCE=std(MW157.TCE,'omitmissing')/mean(MW157.TCE,'omitmissing'),...

Coefficient of Variation

Coefficient of variation (CV) of a time series data set is the ratio of standard deviation and mean. CV provides a measure of variability of time series data.

Coefficient of Variation	Variance
<0.50	Low
0.5 to 1.0	Moderate
>1.0	High

```

Group Statistics Standard Functions

- "sum" Sum
- "mean" Mean
- "median" Median
- "mode" Mode
- "var" Variance
- "std" Standard deviation
- "min" Minimum
- "max" Maximum
- "range" Maximum minus minimum
- "nummissing" Number of missing elements
- "numunique" Number of distinct nonmissing elements
- "nnz" Number of nonzero and non-NaN elements
- "all" All computations previously listed

Group Descriptive Statistics Functions

- **Outliers**
- **10th, 25th, 50th, 75th, 90th, and 95th percentile**
- **Skewness, Kurtosis**
- **Greater than specified limit**

```
% Is outlier function
function y = outlier(x)
% Count the number of outliers in each group
y = nnz(isoutlier(x,'quartiles'));
end

% 10th percentile function
function y = prctile10(x)
%Distribution 10th percentile
y = (prctile(x,10));
end

%25th percentile function
function y = prctile25(x)
%Distribution 25th percentile
y = (prctile(x,25));
end

%Distribution 50th percentile function
function y = prctile50(x)
%Distribution 50th percentile
```

```
y = (prctile(x,50));
end

%75th percentile function
function y = prctile75(x)
%Distribution 75th percentile
y = (prctile(x,75));
end

%90th percentile function
function y = prctile90(x)
%Distribution 90th percentile
y = (prctile(x,90));
end

%95th percentile function
function y = prctile95(x)
%Distribution 95th percentile
y = (prctile(x,95));
end

%25 and 75th percentile function
function y = prct25_75(x)
% x is the data in a group from one computation variable
% Distribution 25th and 75th percentile
y = (prctile(x,[25 75]));
end

%skewness function
function y = skew(x)
%Distribution skewness
y= (skewness(x));
end

%skewness function
function y = kurt(x)
%Distribution skewness
y= (kurtosis(x));
end

%Group count >MCL 5
function y = MCL5gt(x)
%Group counts for greater than a limit
y= sum(x>5);
end

%Group count >MCL 2
function y = MCL2gt(x)
%Group counts for greater than a limit
y= sum(x>2);
```

```
end
