

Quick reference guide:

ELD Migration— Steps to Prep

To help you meet the legal requirements of the ELD mandate we've prepared this guide that explains how to migrate from your existing AOB RD units to our ELD solution.

What's different?

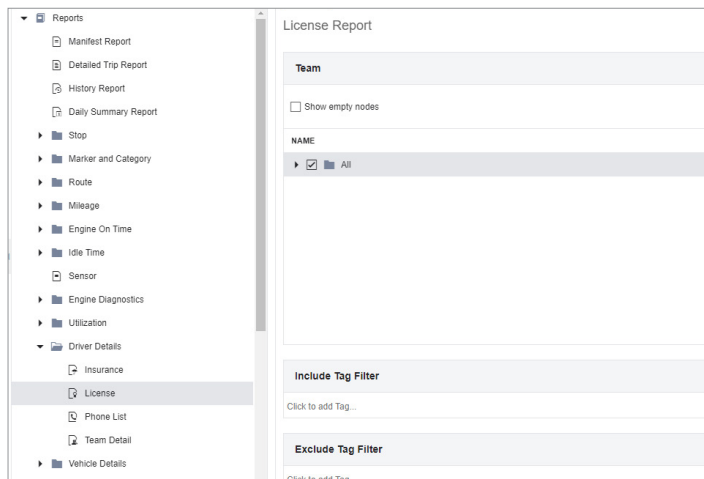

- Restrictions on editing driver logs
- Drivers can email logs from their device
- Drivers can switch the device to inspector mode for roadside inspections
- More exemption options (if applicable)
- The new hardware will have the Bluetooth capability enabled

What do I need to do?

Update your account at verizonconnect.com/login following these four simple steps.

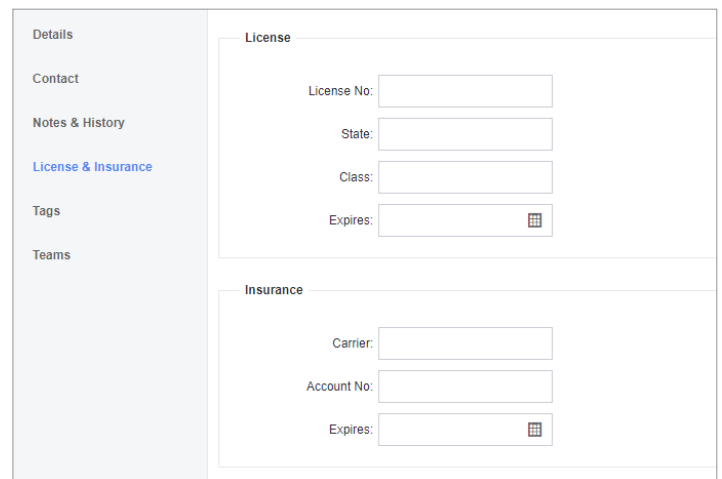

Step 1:

Go to Reports > Driver Details > License to identify drivers that don't have the required ELD information

Step 2:

Input the driver's license number and state for each driver in the Main Menu > Drivers

Step 3:

Input your Carrier Number and Carrier Name

Step 4:

Update all of your devices that have the Workplan app to version 4.4.13 or newer

When these steps have been completed let your Customer Success Manager know.

A screenshot of a web application's 'Settings' window. The window has a title bar with 'Settings' and a close button. On the left is a sidebar menu with options: User, Customer, ELD (highlighted), Digital Tachograph, Jobs & Routes, Vehicles, Maintenance, Speeding, Map, and Markers. The main content area contains three sections: 'Carrier Name' with a text input field, 'Carrier Number' with a text input field, and 'Carrier Mailing Address' with four text input fields labeled 'Address', 'City', 'State', and 'Zip Code'. At the bottom right of the window are 'Save' and 'Cancel' buttons.

Administrator and driver readiness

- Encourage your administration team to attend training (see details to the right).
- Review the ELD resources to the right
- Develop your driver training plan:
 - a. Schedule driver training to watch the video.
 - b. Review the documentation and set expectations.
 - c. Distribute the updated required ELD cab cards and ELD Diagnostics documentation

What happens next?

After you've completed the steps above and let your Customer Success Manager know, we will proceed with the final steps of the migration below.

1. Over-the-Air (OTA) update for the applicable VINs associated with your account.
2. OTA update for your HOS application.
