Understanding Autoimmune Disorders: Discoid Lupus Case Presentation & Discussion

Wednesday, November 2, 2016

5:00 PM – 6:30 PM PST | 8:00 PM – 9:30 PM EST

Inflammation continues to fan the flames of chronic disease in healthcare today including many inflammatory diseases associated with autoimmune disorders which are increasing at alarming rates. With over 80 conditions now identified as A-I diseases, and affecting women three times more than men, over 50 million people have an A-I condition. Among the more common ones include: Hashimoto's thyroiditis, systemic lupus erythematosus, Sjogren's syndrome, A-I hepatitis, Grave's disease, rheumatoid arthritis, multiple sclerosis, myasthenia gravis, inflammatory bowel disease, and the list goes on and on.

In natural medicine we are trained to identify and address possible causes such as hidden allergens, infections, environmental toxins, an inflammatory diet, and stress which are recognized triggers of these auto immune conditions.

Please join Dr. Dickson Thom for this live interactive case presentation and discussion addressing interventions common to all of these conditions using a typical case of discoid lupus. While every patient must be treated on an individualized basis, this case will teach you the foundational tools to utilize to manage any of your patients with an A-I condition. The name of the A-I condition is the least important component of treating any A-I disease. This presentation **will not** focus on a patient's symptoms, but rather the organ systems that are out of balance and have lead to the presentation of the patient with their specific condition. This teleconference should provide you with a different way to assess and understand autoimmune challenges and give you the ground work for successful patient management.

KEY LEARNING HIGHLIGHTS

- Why childhood history is essential to know to treat (cure) an A-I condition
- Addressing the most common triggers for A-I problems
- Essential therapies for ALL A-I diseases
- Why women are more likely to present with an A-I condition
- Understanding organ development as the key to successful treatment

Seminars, teleconferences and webinars are for educational purposes only and are intended for licensed health care practitioners. These therapies are not substitutions for standard medical care. Practitioners are solely responsible for the care and treatment provided to their own patients. The information provided by speakers in this educational program, together with any written material, do not necessarily represent the view of Seroyal and are not intended as medical advice.
