

### **How to Install a Rivet On Nameplate onto a Dog Collar**

1. Place the nameplate on the collar in the location you would like to install it.
2. Mark the nameplate rivet hole positions.
3. Punch holes in the collar where you made the nameplate hole marks with a hammer and punch, leather punch or drill. Use a durable surface during installation to prevent damages.
4. For nylon collars, burn the edges of the holes to remove frayed strands.
5. Push the rivet posts through the holes in the collar from the backside of the collar.
6. Then push the rivet posts through your rivet-on nameplate and attach the provided rivet caps.
7. Tap the rivet caps onto the rivet posts with a hammer until the caps flatten.
