

February 19, 2021

END OF LIFE NOTICE

6003A Three Phase Electrical Power Calibrator

To Whom it May Concern:

Effective April 2, 2021, Fluke Calibration will cease production and sale of the 6003A Three Phase Electrical Power Calibrator and all its unique and specific accessories and options. Fluke introduced this model in 2014 as a competitive calibrator capable of supplying accurate 3 phases of current and voltage.

The Fluke 6130B is the closest replacement for the 6003A. While there is no direct replacement for the 6003A, the 6130B offers significant benefits in most applications

- Improved accuracy
- Greater voltage and current ranges
- Increased number of harmonics
- Expanded energy inputs
- Modularity of 6100B offers flexibility to configure 1-4 phases in a single system

Starting April 2, 2021, the 6003A will enter its 5-year extended support period. During this time Fluke will provide repair and calibration support. After that time, Fluke will continue to support routine calibrations. However, repairs will be limited to existing parts availability beyond April 2026.

For more information on the Fluke 6100B please visit www.flukecal.com or contact your local Fluke Sales Agent

Sincerely,

Wally Miller
