## **LIMITED WARRANTY AND LIMITATION OF LIABILITY**

Each Fluke product is warranted to be free from defects in material and workmanship under normal use and service. The warranty period is one year and begins on the date of shipment. Parts, product repairs, and services are warranted for 90 days. This warranty extends only to the original buyer or end-user customer of a Fluke authorized reseller, and does not apply to fuses, disposable batteries, or to any product which, in Fluke's opinion, has been misused, altered, neglected, contaminated, or damaged by accident or abnormal conditions of operation or handling. Fluke warrants that software will operate substantially in accordance with its functional specifications for 90 days and that it has been properly recorded on non-defective media. Fluke does not warrant that software will be error free or operate without interruption.

Fluke authorized resellers shall extend this warranty on new and unused products to end-user customers only but have no authority to extend a greater or different warranty on behalf of Fluke. Warranty support is available only if product is purchased through a Fluke authorized sales outlet or Buyer has paid the applicable international price. Fluke reserves the right to invoice Buyer for importation costs of repair/replacement parts when product purchased in one country is submitted for repair in another country.

Fluke's warranty obligation is limited, at Fluke's option, to refund of the purchase price, free of charge repair, or replacement of a defective product which is returned to a Fluke authorized service center within the warranty period.

To obtain warranty service, contact your nearest Fluke authorized service center to obtain return authorization information, then send the product to that service center, with a description of the difficulty, postage and insurance prepaid (FOB Destination). Fluke assumes no risk for damage in transit. Following warranty repair, the product will be returned to Buyer, transportation prepaid (FOB Destination). If Fluke determines that failure was caused by neglect, misuse, contamination, alteration, accident, or abnormal condition of operation or handling, including overvoltage failures caused by use outside the product's specified rating, or normal wear and tear of mechanical components, Fluke will provide an estimate of repair costs and obtain authorization before commencing the work. Following repair, the product will be returned to the Buyer transportation prepaid and the Buyer will be billed for the repair and return transportation charges (FOB Shipping Point).

**THIS WARRANTY IS BUYER'S SOLE AND EXCLUSIVE REMEDY AND IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO ANY IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. FLUKE SHALL NOT BE LIABLE FOR ANY SPECIAL, INDIRECT, INCIDENTAL, OR CONSEQUENTIAL DAMAGES OR LOSSES, INCLUDING LOSS OF DATA, ARISING FROM ANY CAUSE OR THEORY.**

Since some countries or states do not allow limitation of the term of an implied warranty, or exclusion or limitation of incidental or consequential damages, the limitations and exclusions of this warranty may not apply to every buyer. If any provision of this Warranty is held invalid or unenforceable by a court or other decision-maker of competent jurisdiction, such holding will not affect the validity or enforceability of any other provision.

## ***Introduction***

The Fluke 8558A 8 1/2 Digit Multimeter and 8588A Reference Multimeter (the Product or Multimeter unless otherwise specified) are for demanding and precise measurement applications. The Product functions in both stand-alone and systems applications. 8 1/2 digit resolution provides high performance and makes the Product well suited for application use in standards labs, calibration labs, engineering labs, and systems use. The 8588A includes more features and higher performance for the most demanding metrology applications.

## ***Safety Information***

A **Warning** identifies conditions and procedures that are dangerous to the user. A **Caution** identifies conditions and procedures that can cause damage to the Product or the equipment under test.

General Safety Information is located in the printed *Safety Information* document that ships with the Product. It can also be found online at [www.Flukecal.com](http://www.Flukecal.com). More specific safety information is listed where applicable.

## ***Specifications***

Safety Specifications are located in Safety Specifications section of the *Safety Information* document. Complete specifications are at [www.flukecal.com](http://www.flukecal.com). See the *8588A/8558A Product Specifications*.

### **⚠ Warning**

**If the Product is operated in any way not specified by this manual or other documentation provided by Fluke, the protection provided by the Product may be impaired.**

## ***Usage Information***

Complete Product usage information is located in the *8588A/8558A Operators Manual* found online at [www.Flukecal.com](http://www.Flukecal.com).

## Contact Fluke Calibration

To contact Fluke Calibration, call one of the following telephone numbers:

- Technical Support USA: 1-877-355-3225
- Calibration/Repair USA: 1-877-355-3225
- Canada: 1-800-36-FLUKE (1-800-363-5853)
- Europe: +31-40-2675-200
- Japan: +81-3-6714-3114
- Singapore: +65-6799-5566
- China: +86-400-810-3435
- Brazil: +55-11-3759-7600
- Anywhere in the world: +1-425-446-6110

To see product information and download the latest manual supplements, visit Fluke Calibration's website at [www.flukecal.com](http://www.flukecal.com).

To register your product, visit <http://flukecal.com/register-product>.

## Calibration Interval and Performance

Fluke Calibration recommends that the Product be calibrated on one of 2-year, 365-day, or 90-day intervals depending on the requirements of the applications for which the Product is used.

During manufacture, the Product is adjusted and verified with low uncertainties, reflected in the Absolute Specifications. After recalibration, the user should apply the calibration uncertainties for the calibration standards and for the process applicable to that calibration by combining those calibration uncertainties with the Multimeter Relative to Standards specifications.

## Required Equipment

Table 1 lists the necessary equipment to adjust Product calibration.

**Table 1. Equipment for Calibration Adjustments and Performance Verification**

Equipment Name	Recommended Models	Comment
Multifunction Calibrator	Fluke Calibration 5730A	
Amplifier	Fluke Calibration 5725A	To increase Volt Hz product and current range of the Multifunction Calibrator
Multiproduct calibrator	Fluke Calibration 5522A	For voltage >1 MHz and capacitance verification
Transconductance amplifier	Fluke Calibration 52120A	For currents >11 A, verification only
10 GΩ Standard Resistor		Verification only

**Table 1. Equipment for Calibration Adjustments and Performance Verification (cont.)**

Equipment Name	Recommended Models	Comment
1 GΩ Standard Resistor	Fluke Calibration 8508A-7000K	1 GΩ Standard, Low thermal emf leads, two 4-wire shorting PCB
100 MΩ Standard Resistor		
1 Ω Standard Resistor	Fluke 742-1	
1 nF Standard Capacitor		8588A adjustment only (not required for 8558A adjustment)
10 MHz Reference	Off-air standard	
4-wire short PCB		

Alternate equipment may be used, but users should ensure it provides adequate calibration uncertainties. Performance of the Product after calibration should be determined by combining the applicable calibration uncertainties provided by the calibration equipment with the 8508A Relative to Standards specifications. (Fluke Calibration recommends RSS summation).

### **Calibration Adjustment Overview**

The Product has two sets of stores: Certified and Baseline. Only the Certified stores can be changed during adjustment. Store is populated at manufacture and would not normally be overwritten. The Baseline store provides a facility to monitor the long-term performance of the Product independent of regular adjustment.

Calibration of all functions of the Multimeter is done from the front panel or remotely. No hardware adjustments are necessary.

### **Manual Adjustment**

The Product guides you through the manual adjustment process. Some early steps in the process are only required after the Product is repaired.

The adjustments are numbered in groups:

- 001 After first build or post repair
- 101 One-time factory characterizations
- 201 Voltage
- 301 Current
- 401 Resistance
- 501 Capacitance (not applicable to 8558A)
- 601 Frequency
- 701 Zero

The full list of adjustment points and required inputs is in Table 2. Routine adjustment starts at **Step 201: ADC Reference Characterize**.

Not all function range combinations need to be adjusted. To improve efficiency, some adjustments are derived from other adjustments, so it is important to follow the adjustment process in the given sequence. Individual points can be adjusted in isolation later if required.

To enter calibration adjustment mode:

1. Push **INST SETUP**.
  2. Push **F4** (**Calibration Adjustment**).
  3. To enter the adjustment mode, push **F5** (**Enter Passcode**).
  4. Enter the passcode (**123456** is the default).
  5. Make sure that **Set Active Stores** indicates **Certified**.
  6. Push **▼** to highlight: **Certified Stores Adjustment** and push **SELECT**.
- The screen for each adjustment step has two to four data fields, see Figure 1.
7. Use Table 2 to apply the input values.

**Figure 1. Calibration Adjustment Screen**

Regarding the Calibration Adjustment screen (see Figure 1):

- **Step** number and a description is always present.
  - An **Input** value is always shown. The Input may be a discrete value or N/A (not applicable) if no input is required (terminals open circuit).
  - If **Target** shows, it is an editable value to allow non-nominal values to be entered, for example exact resistance reference values.
  - Some adjust steps show a measured value. For some steps, the value may not be obviously related to the step description.
8. When the input requirements (if any) have been applied, push **F2** (**Adjust**) to make the adjustment.
    - **Adjust operation: in progress...** shows as the adjustment takes place.
    - **Adjust operation: Done** indicates the adjustment is complete.
  9. Push **F4** (**Next Step**) to move to the next step in the process.

10. Continue through the adjustment process until all steps are complete.

The last adjustment for 8558A is: **Step 703: Current Zero**. The last step for 8588A is **Step 704: Capacitance zero**.

**Table 2. Table Points**

<b>Step</b>	<b>Description</b>	<b>Input</b>
201	ADC Reference Characterize	N/A
202	10 mV Offset	0 mV
203	10 mV Gain	+10 mV
204	100 mV Offset	0 mV
205	100 mV Gain	+100 mV
206	1 V Offset	0 V
207	1 V Gain	+1 V
208	10 V Offset	0 V
209	10 V Gain	+10 V
210	100 V Offset	0 V
211	100 V Gain	+100 V
212	1 kV Offset	0 V
213	1 kV Gain	+1 kV
214	ACV 1 MΩ HF 1 kHz Ref	100 V 1 kHz
215	ACV 1 MΩ HF 60 kHz	100 V 60 kHz
301	100 µA Offset	0 µA
302	100 µA Gain	+100 µA
303	1 mA Offset	0 mA
304	1 mA Gain	+1 mA
305	10 mA Offset	0 mA
306	10 mA Gain	+10 mA
307	100 mA Offset	0 mA
308	100 mA Gain	+100 mA
309	1 A Offset	0 A
310	1 A Gain	+1 A
311 <sup>[1]</sup>	10 A Offset	0 A
312 <sup>[1]</sup>	10 A Gain	+10 A

**Table 2. Table Points (cont.)**

Step	Description	Input
401	Ohms 4W Offset	0 Ω 4W
402	10 Ω Gain	10 Ω 4W
403	100 Ω Gain	100 Ω 4W
404	1 kΩ Gain	1 kΩ 4W
405	10 kΩ Gain	10 kΩ 4W
406	100 kΩ Gain	100 kΩ 4W
407	1 MΩ Gain	1 MΩ 4W
408	10 MΩ Gain	10 MΩ 4W
409	100 MΩ Gain	100 MΩ 4W
410	1 GΩ Gain	1 GΩ 4W
411	1 Ω Zero	0 Ω 4W
412	1 Ω Gain	1 Ω 4W
501 <sup>[1]</sup>	Capacitance Zero	N/A
502 <sup>[1]</sup>	1 nF Gain	1 nF
601	Frequency	10 MHz (Rear BNC)
701	Voltage Zero	N/A
702	Resistance Zero 4W	4W Short Circuit
703	Current Zero	N/A
704 <sup>[1]</sup>	Capacitance Zero	N/A

[1] Points are unavailable in 8558A.

### **Remote Adjustment**

Refer to [Manual Adjustment](#) for the process steps. Remote commands are in the Calibration subsystem section of the *8588A/8558A Programmers Guide* found online at [www.Flukecal.com](http://www.Flukecal.com).

### **Calibration Verification**

The permissible errors shown are the 99 % confidence, 1-year, absolute errors. These error values include Fluke Calibration calibration uncertainty. Adjust the permissible error values to reflect the actual measurement uncertainty if they are different from the listed values.

### **DC Voltage**

Configuration: Z in Auto, Internal Guard, Front Input, Aperture = Auto, Resolution 7.5 Digits, Suggested Reference: 5730A

Configuration: Z in Auto, 7.5 Digits, Internal Guard, Front Input, Aperture = Auto

### Resistance Normal

Configuration: 7.5 Digits, Aperture = Auto, 4-wire (2-wire at 100 MΩ), Lo Current Off, Internal Guard, Front Input, Filter Off, Zeros ≤10 MΩ performed into a 4-wire short circuit; Zeros >10 MΩ performed across the resistor with the current shorted as described in the Operators Manual.

Suggested Reference: 5730A

### Optional Checks

#### DC Voltage (Rear Input)

Configuration: Z in Auto, 7.5 Digits, Internal Guard, Rear Input, Aperture = Auto

Suggested Reference: 5730A

Range	Reference Value	Permissible Error ( $\pm$ )		Fluke Calibration Uncertainty ( $\pm$ )
		8588A	8558A	
10 V	0.000 000 V	0.000 001 V	0.000 001 V	0.000 000 30 V
10 V	10.000 000 V	0.000 037 V	0.000 054 V	0.000 006 40 V

### **DC Current (Rear Input)**

Configuration: 7.5 Digits, Internal Guard, Rear Input, Filter Off, Aperture = Auto

Range	Reference Value	Permissible Error (±)		Fluke Calibration Uncertainty (±)
		8588A	8558A	
100 µA	0.000 00 µA	0.000 50 µA	0.000 60 µA	0.000 12 µA
100 µA	100.000 00 µA	0.001 60 µA	0.001 90 µA	0.000 45 µA
100 mA	0.000 00 mA	0.001 30 mA	0.000 60 mA	0.000 26 mA
100 mA	100.000 00 mA	0.005 60 mA	0.006 80 mA	0.000 58 mA

### **AC Voltage (Rear Input)**

Configuration: Input: Rear, Ext Guard: Off, Resolution: 6 digits, Measure Setup: DC 1 MΩ, RMS Filter 40 Hz, Frequency Path Bandwidth Limit: OFF, Band: Wideband

Suggested Reference: 5730A

Range	Frequency	Reference Value	Permissible Error (±)		Fluke Calibration Uncertainty (±)
			8588A	8558A	
1 V	1 kHz	1.000 000 V	0.000 089 V	0.000 100 V	0.000 018 V
10 V	1 kHz	1.000 00 V	0.000 89 V	0.001 00 V	0.000 17 V

### **AC Current (Rear Input)**

Configuration: 7.5 Digits, Internal Guard, Front Input, DC Coupled, Wideband RMS Filter 40 Hz.

Suggested Reference: 5730A

Range	Frequency	Reference Value	Permissible Error (±)		Fluke Calibration Uncertainty (±)
			8588A	8558A	
100 µA	1 kHz	100.000 0 µA	0.040 0 µA	0.052 9 µA	0.006 6 µA
100 µA	10 kHz	100.000 0 µA	0.072 3 µA	0.091 6 µA	0.008 1 µA

### **Resistance – HV Ohms (Rear Input)**

Configuration: 7.5 Digits, Aperture = Auto, 4-wire, Internal Guard, Rear Input, Filter Off.

Suggested Reference: 10 GΩ Standard Resistor

Range	Reference value	Permissible Error (±)		Fluke Calibration Uncertainty (±)
		8588A	8558A	
10 GΩ	0.000 000 GΩ	0.012 900 GΩ	0.012 900 GΩ	0.000 010 GΩ
10 GΩ	10.000 000 GΩ	0.019 677 GΩ	0.019 677 GΩ	0.001 600 GΩ

## Maintenance

This section contains simple maintenance procedures and describes the built in self-test facilities. See [Safety Information](#) before doing the procedures in this section.

### Inspection and Cleaning

#### Warning

To prevent possible electrical shock, fire, or personal injury:

- Do not remove the covers from the Product unless you are qualified to do so.
- Do not operate the Product with covers removed or the case open. Hazardous voltage exposure is possible.
- Disconnect the mains power cord before you remove the Product covers.
- Remove the input signals before you clean the Product.
- Use only specified replacement parts.
- Have an approved technician repair the Product.

#### Caution

- Beyond removal of the external covers, removing the top cover voids calibration of the Product.
- Do not use aromatic hydrocarbons or chlorinated solvents for cleaning. They can damage the plastic materials used in the Product.
- Place the Product securely on an appropriate bench top or work surface before removing the covers.
- Do not unnecessarily touch any part of the PCAs or straighten component positions on the PCAs.
- Do not permit water to enter the Product.

Inspect the instrument exterior for signs of damage.

### Clean the Exterior

To keep the Product looking new, clean the case, front panel keys, and display with a soft cloth slightly dampened with either water or a non-abrasive mild cleaning solution that is not harmful to plastics. Clean any dust from the exterior of the Product using a dry brush or vacuum cleaner.

### Clean the Air Inlet

Air is drawn into the Product through the grill on the side and then exhausted through the rear panel. If the Product is used in dusty environment, it may become necessary to clean the air inlet. This can be done from the outside with a vacuum cleaner hose.

## Fuse Replacement

The line and neutral wires are each protected by a fuse. The fuse rating label below the fuse holder shows the correct replacement fuses. Line and neutral are fused individually. The same fuses are used for both 100 V to 120 V and 200 V to 240 V operation.

### Warning

To prevent possible electrical shock, fire, or personal injury:

- Turn the Product off and remove the mains power cord. Stop for 2 minutes to let the power assemblies discharge before you open the fuse door.
- Replace a blown fuse with exact replacement only for continued protection against arc flash.
- Use only specified replacement fuses, see Table 3.

To access the fuse, see Figure 2:

1. Disconnect the mains power cord.
2. With a standard screwdriver, release the fuse holder door.
3. Pull out the fuse holder.
4. If necessary, replace one or both fuses.
5. Reinsert the fuse holder.
6. Close the fuse holder door.

Table 3. Replacement Fuses

Line Voltage Range	Fuse Description- Mains Fuse	Fluke Part Number
 100 V – 120 V	T1.5AH 250 V	2059740
 220 V – 240 V		
<b>Rear Input Current Protection Fuse</b>		
-	1.6AH 250V	1582072

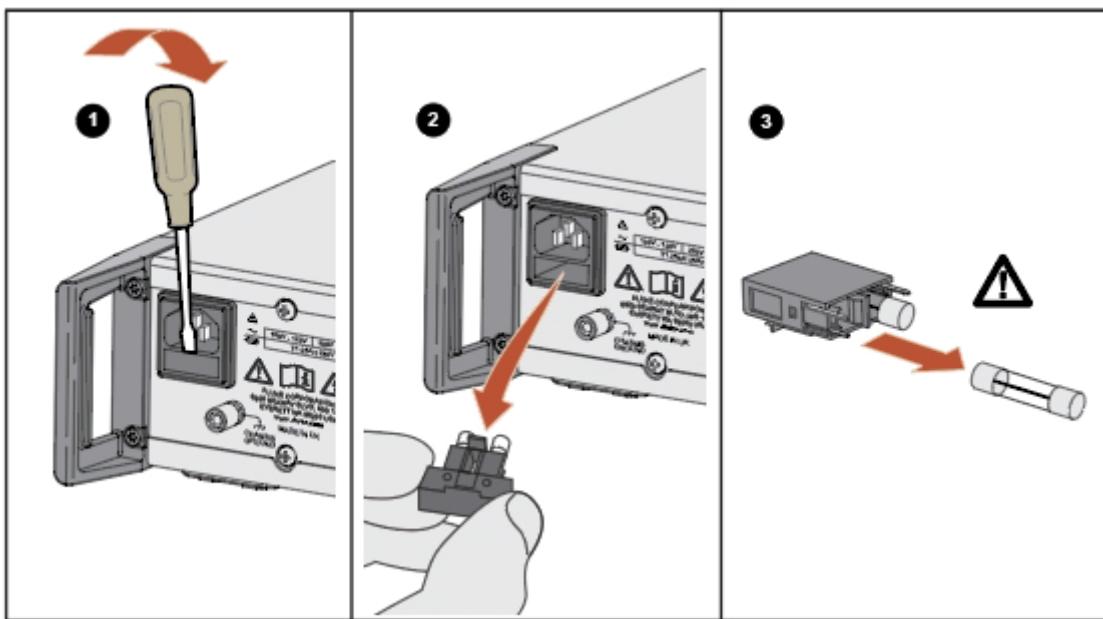

Figure 2. Access the Fuse

The Mains fuses are: 1.25A, 250V, Time Lag

### Rear-Input Current Fuse

The Product is fitted with a 2 A fuse to protect the rear current input circuitry. The fuse is located at the rear of the Multimeter just to the left of the current input terminal (A). A half-twist of the fuse cap releases the fuse for inspection or replacement. See Table 2.

### Self Test

The Product provides a self-test facility that tests instrument functionality.

To run the self-test:

1. Push **INST SETUP**.
2. Select **F5** (Diagnostics) and then **F1** (Selftest). The number of the test currently running is displayed on screen – for example: **Performing test 23 of 36**. The end of the self-test is indicated by: **All tests passed**, or if a failure occurs, the test number(s) and a brief description of the failed test(s) is displayed.
3. If one or more self-test failures is reported, note the test number(s) and contact your a Fluke Calibration Service Center.
4. Push **BACK** to Exit self-test mode.

## ***List of Replaceable Parts***

This section contains an illustrated list of replaceable parts for the Product. Parts are listed to the modular level only. Each assembly is accompanied by an illustration that shows the location of each part and its reference designator.

### ***How to Obtain Parts***

Electrical components may be ordered directly from the manufacturer by using the manufacturers part number, or from Fluke Calibration and its authorized representatives by using the part number listed in Table 4. The parts are shown in Figures 3, 4, and 5. To order components directly from Fluke Calibration, see [Contact Fluke Calibration](#). To ensure prompt delivery of the correct part, include the following information when you place an order:

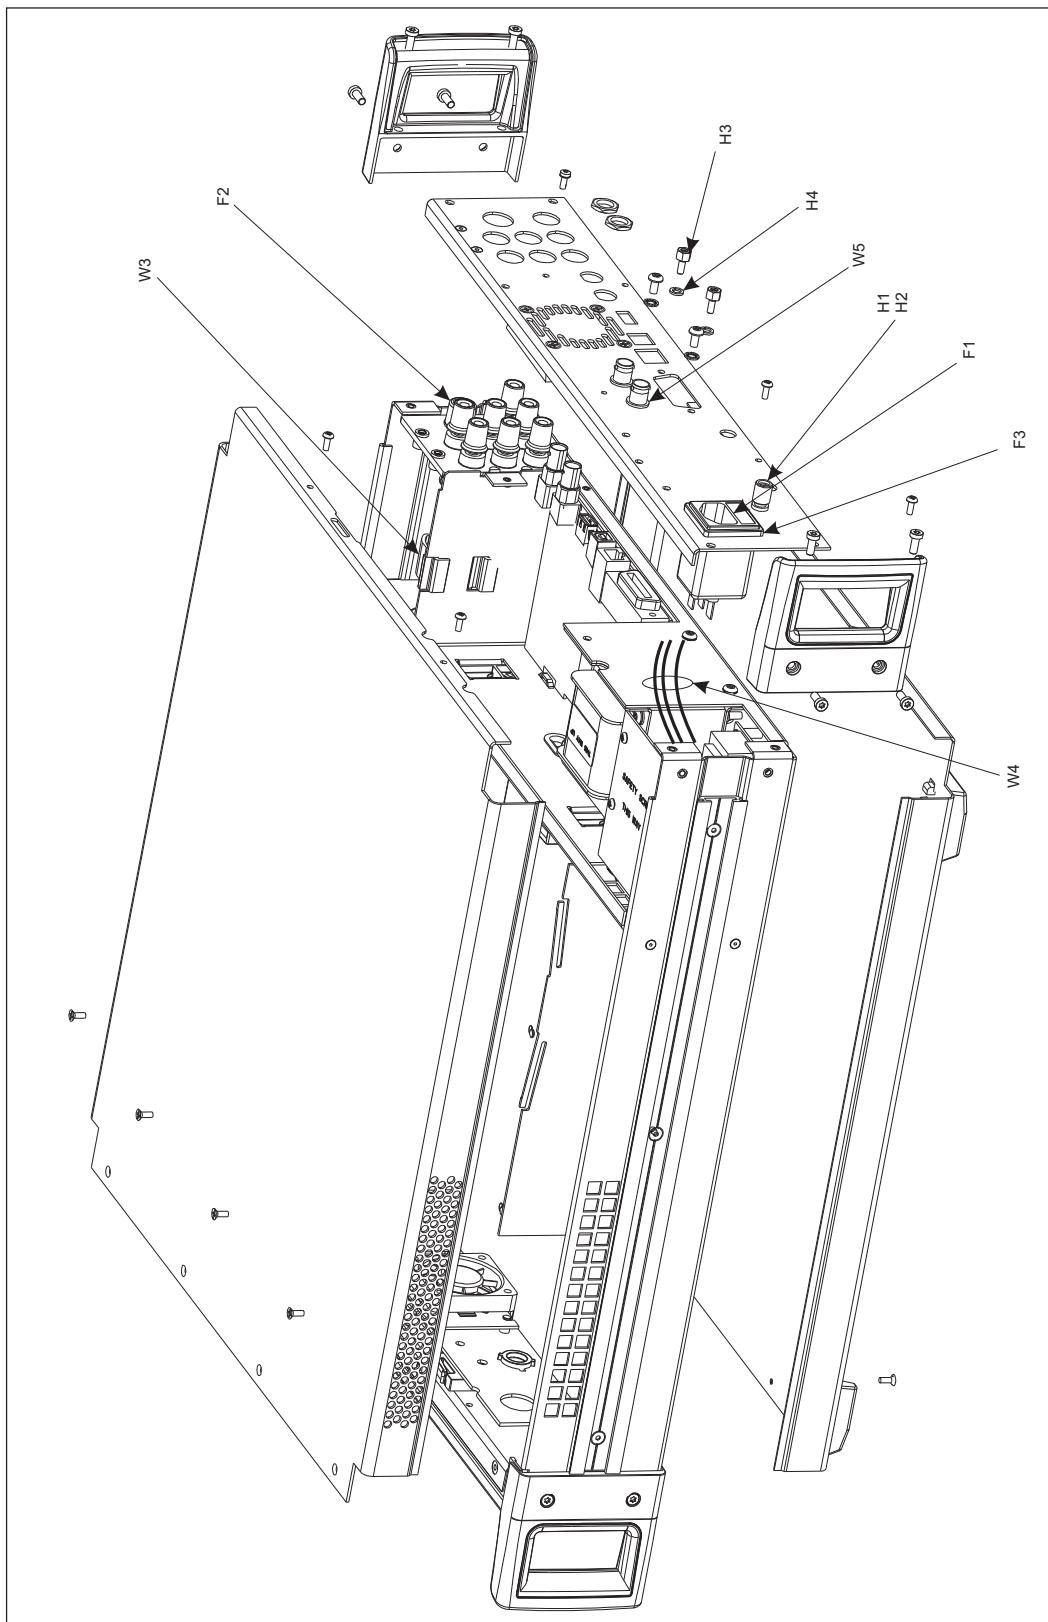

- Fluke Calibration stock number
- Description (as given under the Description heading)
- Quantity
- Reference Designator
- Part number and revision level of the pca containing the part.
- Instrument model and serial number.

**Table 4. List of Replaceable Parts**

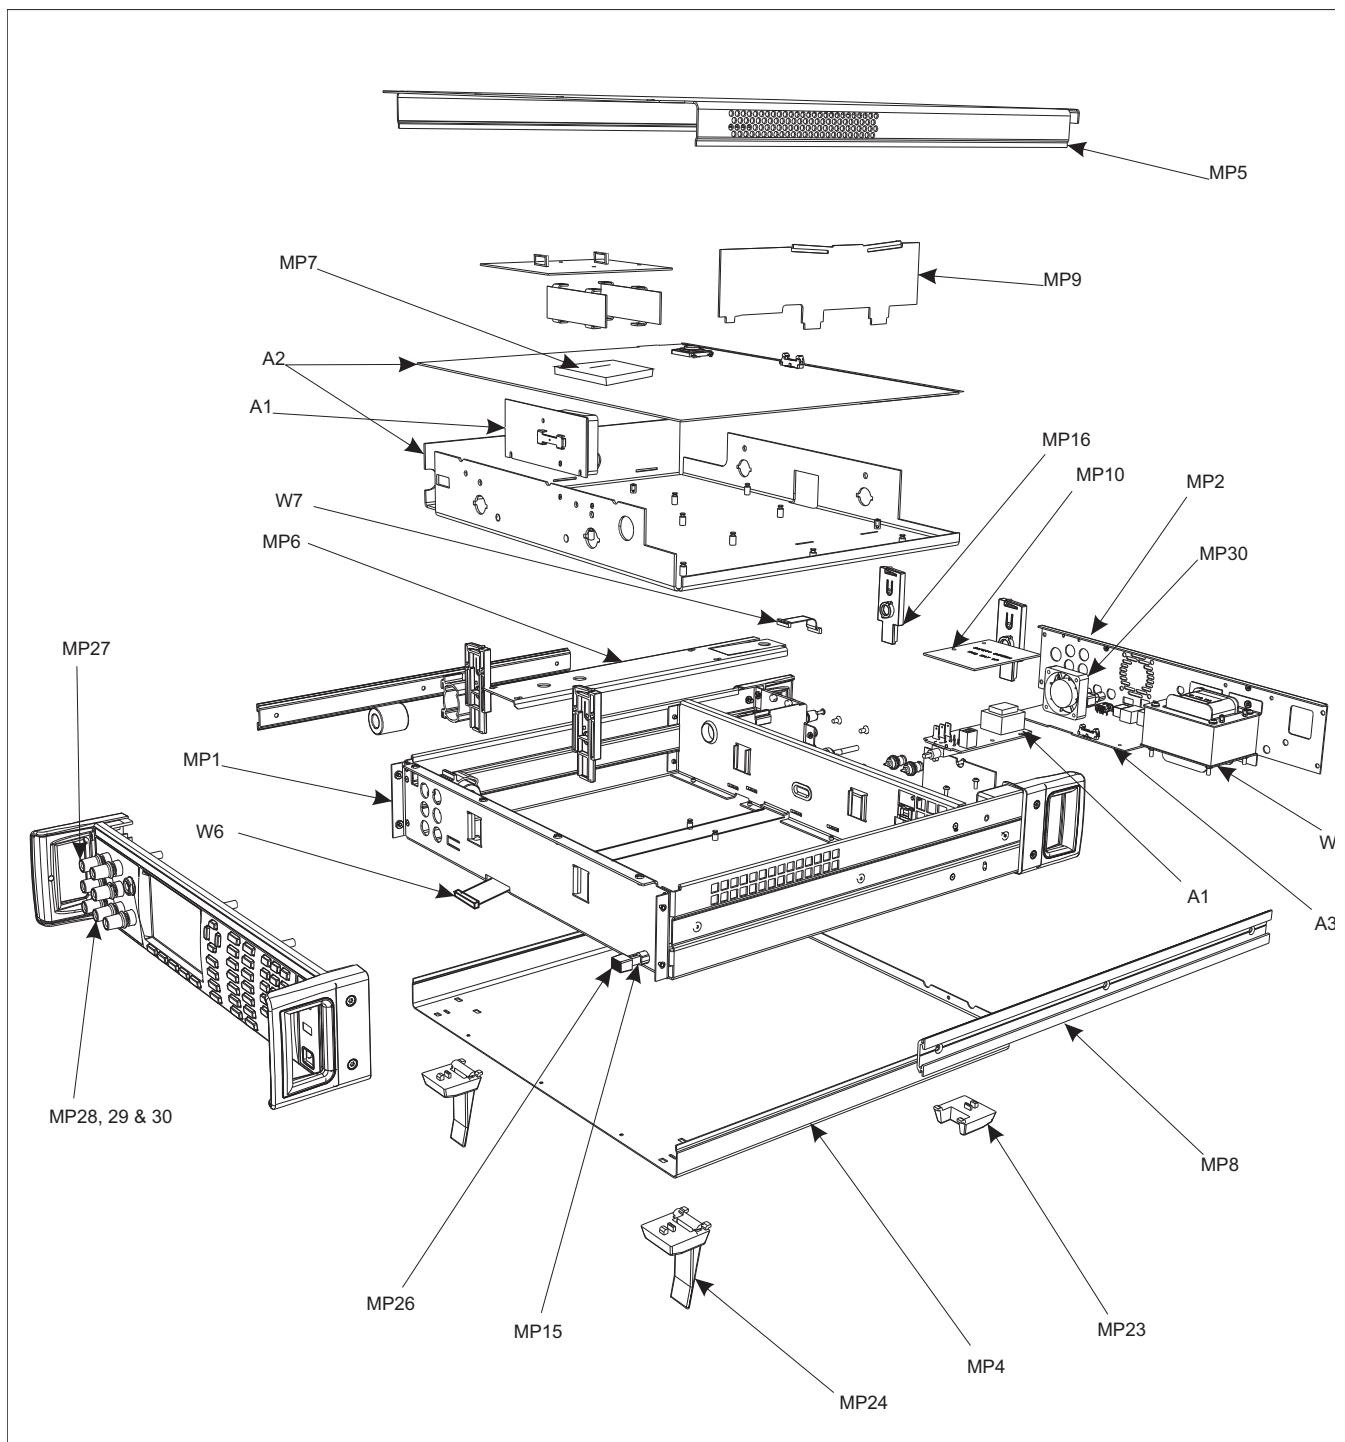

Reference Designator	Description	Fluke Stock Number	Qty
A1	Tested FRONT PCA ETC / BREAK OUT	5111995	1

**Figure 3. Main Chassis Exploded View**

**Figure 4. Replacement Parts**

**Figure 5. Replacement Parts (cont.)**

## **Remove Hardware Components**

Use the subsequent procedures to remove external hardware components from the Product. To gain access to the interior of the Product, remove all of the hardware components in sequence See Figures 3, 4, and 5.

To reassemble the Product, reverse the dismantling process.

### **Handles**

The Product has four handles, two on the front panel and two on the rear panel. All four handles are the same and each is secured to the chassis using four screws, two on the front of the handle and two on the side.

To remove each of the handles:

1. Remove the two screws on the front of the handle.
2. Remove the two screws from the side of the handle.

### **Bottom Feet and Tilt Stand Bail**

The Product has four protective feet on its bottom cover. The front two feet have captured tilt stand bails. To remove each foot:

1. Position the Product so that the bottom cover is facing up.
2. Push the release tab (as indicated on the foot molding), using a small screwdriver inserted into the open area to remove the foot.
3. Lift the foot from the bottom cover.

### **Top and Bottom Covers**

The top and bottom covers of the Product are similar except for the feet on the bottom cover which hide 2 screws, see [\*\*Bottom Feet and Tilt Stand Bail\*\*](#).

To remove the top cover:

1. Position the Product so the top cover is facing up.
2. The top cover is secured with six screws.
3. Remove the two panhead screws that attach the cover to the rear panel.
4. Remove the four countersunk screws from the top face.
5. Lift the cover straight up to remove.

To remove bottom cover:

1. Position the Product so the bottom cover is facing up, the cover is secured with seven screws.
2. Remove the two panhead screws that attach the bottom cover to the rear panel.
3. Remove the front two feet, to gain access to all of the cover fixing screws.
4. Remove the five countersunk screws on the top face.
5. Lift the cover straight up to remove.

### **Front-Panel Assembly**

1. Remove the top cover.
2. Open the small white cable guide nearest to the terminals.
3. Remove the 2 x M4 Torx panhead screws that hold the thick red and black cables to the Current Shunt PCA.
4. Locate the two large ferrite Beads held by white plastic clips, slide the plastic clips upwards and inwards to unsecure them from the metal chassis.
5. Unplug the five white connectors from the main Analogue PCA (Red, Black, Blue, Brown and White wires that emerge from the front panel).
6. Remove the two Handle side screws from each front handle.
7. Remove the 3 T10 torx panhead self-tapping screws located at the top of the Chassis front panel. Take care not to drop these inside the unit.
8. Pull the front panel straight forward to dislodge the panel from the chassis.
9. Unplug the front panel Ribbon Cable to release the front panel. Take care as the Green power switch is unsupported and vulnerable.

### **Rear Panel**

1. Remove the Top Cover.
2. Remove the Bottom Cover.
3. Remove the two rear handles.
4. Remove 2 x T10 Torx Panhead screws from mains inlet protection PCA and move it to the side.
5. Unplug the Blue, Brown, and Green / Yellow wire connectors from the back of the mains inlet module.
6. Remove the 4 x Transformer fixing screws (T20 x Panhead), be careful as the transformer is now loose.
7. Remove the 2 IEEE jack screws and washers.
8. Unplug the “Trig In”, “Trig Out”, and Fan connectors from the A3 Digital PCA.
9. Remove the BNC securing nuts from the “Freq Ref” and “Freq Counter” connectors.
10. Remove 1 x T10 Torx panhead screw.
11. Remove 2 x T10 Torx countersunk screws.

The rear panel is now free from the unit, however the Mains Inlet, Chassis Ground connector, Fan, and Freq In / Out connectors are still attached to the rear panel.

### **Remove the Transformer Assembly**

1. Remove the top cover.
2. Remove the 2 x T10 Torx Panhead screws from the mains inlet protection PCA, turn the PCA over and remove the wires from the cable guide.
3. Remove the 4 x Transformer fixing screws (T20 x Panhead), taking care as the transformer is now loose.
4. Unplug the connector to the A3 Digital PCA.
5. Unplug the connector to the A1 Mains Switching PCA.
6. Unplug the connector from the A2 Analog PCA, taking care to release the wires from the cable guide fixed to the chassis and thread the plug through the Chassis hole.
7. The Transformer is now free to be lifted from the chassis.

### **Remove A3 Digital PCA Assembly**

1. Remove Rear Panel.
2. Unplug the connector to the Transformer.
3. Unplug the small ribbon connector that connects to the A2 Analog PCA.
4. Unplug the large ribbon connector from the Front-panel assembly.
5. Remove the 1 x T10 Torx panhead screw. The A3 Digital is now free from the unit.

### **Remove the A2 Analogue Assembly**

1. Remove the top cover.
2. Open the 4 x small white cable guides and release wires
3. Unplug the 5-way and 2 x 2way connectors that connect the A1 Current Shunt PCA to the A2 Analogue PCA.
4. Remove the T10 Torx Panhead screw that holds the A1 Current Shunt PCA to the metalwork (located between the small fan and the large relay).
5. Move the A1 Current Shunt PCA including the large ferrite up and out of the way.
6. Unplug the 11 x 2-way connectors from the front panel and rear-input assemblies. Lift these out of the way, including the large ferrite near the front terminals.
7. Remove the glass fiber air deflector.
8. Unplug the 10-way connector to the transformer and move away.
9. Unplug the small ribbon cable going to the A3 Digital PCA. The A2 analog PCA including its mounting plate and Insulators, can now be lifted straight up and out of the chassis.
10. 14 x Light Grey insulators are keyed into the mounting plate. To remove, rotate approximately  $\frac{1}{4}$  turn and lift away.

***Remove the A1 Front PCA (Including Keypad and the Display)***

1. Remove the Front PCA.
2. Carefully remove the front ext port connector securing nut.
3. Unplug the small PCA that the ext port connector is soldered to.
4. Remove the 12 x T10 Torx self-tap screws.
5. Remove the 1 x T10 Torx panhead screw that holds the wire to the bezel bracket.
6. Unplug the Display flexi PCB from the connector. The A1 Front PCA is now free from the instrument, also free is the front Keypad and Display assembly.
