

Pocket Toner® NX8 Cable and Telephone Kit

Test voice, data and video cables for open and short circuits, continuity and voltage

PTNX8 Cable and Telephone is the most popular kit used for "Triple Play" installations. This kit contains all the essential adapters for identifying and testing telephone and TV cables. Additionally, the Dial Tone Detective™ (DTD) can instantly indicate the presence of a dial tone and proper polarity at a voice jack.

Simply place each of the numbered ID caps on the remote ends of the cables to test, then connect the main unit to the other end of the test cable one at a time. If there is continuity, the green LED on the ID cap will light up and the main unit will show the ID cap's number (1-8) on its digital display. In addition, the audible indicator in the main unit will emit a short tone. PTNX8 also tests for the presence of both AC and DC voltages from 6v-52v.

Features

- Test cables 8x faster with 8 ID caps-LED to indicate continuity low-voltage circuit protection (6v-52v) in main unit, toner unit and ID caps
- Eight segment LED displays five different test results
- Main unit "beeps" when line condition changes
- Bi-gender toner unit with removable *Speed 81™* coupler
- Two buzzers to indicate continuity
- Test polarity with the Dial Tone Detective™ adapter
- Auto shut off feature extends battery life
- One-year limited warranty

What's in the kit

- Pocket Toner® NX8
- 8 ID caps
- 66 block adapters
- RJ-11 adapter
- Dial Tone Detective™
- Alligator clips and RJ-11 adapter
- F-female coupler (F-81)
- F-male coupler (F-71)
- F-female coupler (Speed 81™)
- F-male push-on adapter
- AAA battery
- Deluxe case with belt clip

Test Results Display

	Blinking [-] indicates an open circuit
	Blinking [S] indicates a short
	Solid [C] indicates continuity with either a 50-75 ohm ID cap or the toner unit
	A solid matching number indicates continuity with one of the 8 ID caps
	Blinking [~] indicates AC voltage (>6 volts) Solid [~] indicates DC voltage (>6 volts)
