Dear James,

Nexans is pleased to announce the renewed approval of the DSX-5000 for Class FA / Category 7A testing. This approval is based upon evaluation of the latest GG45 Channel adapter DSX-CHA012A-S and the DSX-5000 tester versus network analyzer by Nexans Labs.

Nexans has carried out comprehensive testing of our LANmark-7A product range with the DSX-5000 tester in combination with the new GG45 Class F_A Channel Adapter and found a high degree of repeatability and agreement with the results from our laboratory test equipment. The observed accuracy is better than the Level V.

DSX-5000 is approved for use in channel certification testing with all of our Category 7A/Class F_A, and Category 7/Class F system warranties.

We will be notifying our global authorized installers of this renewed approval and have updated our LANmark-7/7A Field Testing requirements to include the DSX-5000.
