Dear James,

Nexans is pleased to announce the approval of the DSX-8000 for Class II /Category 8.2, Class FA / Category 7A, Class EA / Category 6A and Class E / Category 6 testing.

This approval is based upon evaluation of the latest GG45 Channel adapter DSX-CHA-8-GG45-S, the Cat6A adapters DSX-CHA804S, DSX-PLA804S and the DSX-8000 tester versus network analyzer by Nexans Labs.

Nexans has carried out comprehensive testing of our LANmark-8 & LANmark-7A & LANmark-6A product range with the DSX-8000 tester and found a high degree of repeatability and agreement with the results from our laboratory test equipment. The observed accuracy is better than the Level V.

DSX-8000 is approved for use in channel certification testing with all our Class II and Class F_A system warranties.

DSX-8000 is approved for use in link and channel certification testing with all our Class E_A and Class E system warranties.

We will be notifying our global authorized installers of this renewed approval and have updated our LANmark-8, LANmark-7A and LANmark-6/6A Field Testing requirements to include the DSX-8000.
