## Features and Services

- Compatible with any Lowrance or Simrad device capable of logging .slg, .sl2, or .sl3 file format
- Compatible with any NMEA compatible 3<sup>rd</sup> party GPS or GNSS Receiver
- Interpolated bathymetric blue-scale shaded contour map around high definition shorelines digitized automatically by Quality Control staff
- Submerged aquatic vegetation height mapped as percent biovolume (heat map)
- Hardness of bottom as measured by reflectivity/absorption strength of acoustic signal
- Automated summary reports of bathymetric and plant density information
- Export point or grid spreadsheet data to use in 3<sup>rd</sup> party statistics or GIS software
- Export high resolution map imagery as .png or Google Earth (.kml or .kmz)
- Export outputs as high definition GPS charts for your Lowrance or Simrad.
- Sonar imagery syncing with map
- Editing, Polygon, and Waypoint tools
- Merge trips from multiple periods of time or users and create a uniform output
- Offset depth data to a standard elevation benchmark
- Easy to search cloud archive of maps and data
- Quality control review and technical support by technology experts
- \$195/yr maintenance fee required for all lapsed subscriptions
- Free, view only, linked accounts to other members in the organization with one paid subscription
