## **GAVIKA RADIUS**

Implement AAA and secure your network

## IT'S HISTORY

GRADIUS started as a solution to SMEs. Network administrators struggled to build a robust solution using command line editing of complex software. The users did not have a way to manage their credentials. The guests did not have a smooth flow to access the network with restrictions.

Team Gavika was called to solve these problems. The result: GRADIUS.

### Add-on Modules

- **Text/SMS**
- **Reports**
- **Custom modules**
- **Audits**

## DEPLOYMENT

### Hardware requirement

Works on SOHO to large enterprises

- Use a Raspberry PI
- Or a PC
- Or a virtual server
- Or a bare-metal server

### Cloud Version

We will do it all. Just access the application via a web browser.
