Dr. Spears Spotlighting

Breast Lift

Over time, factors such as aging, pregnancy, breastfeeding, weight fluctuations, and genetics can cause the breasts to lose their youthful shape and firmness.

A breast lift, also known as mastopexy, is a surgical procedure designed to address sagging by removing excess skin, reshaping the breast tissue, and repositioning the nipples to create a more lifted, youthful contour.

A breast lift can also be paired with breast augmentation for patients looking to enhance both breast position and volume.

Q: How far in advance should I schedule my Botox or dermal filler appointment before a holiday event?

A: We recommend scheduling your Botox or Dysport appointment at least 2 weeks before your event, allowing time for the full results to develop. For dermal fillers, we suggest 2-4 weeks in advance to allow any swelling or bruising to subside and your results to settle.
