

MidNite Solar's

New Disconnecting Combiners

MidNite Solar is very pleased to announce a new line of disconnecting PV combiners are now shipping, The DISCOS. The DISCOS are built for new code requirements, safety, size, ease of installation, and most importantly, pricing... to keep overall PV system costs coming down!

In designing these disconnecting combiners we put safety first. Our RED die-cast aluminum handle provides immediate visual recognition needed in an emergency situation to quickly disable an array.

Eight and sixteen string combiners are field configured for isolated or non-isolated inverters. The eight and sixteen versions are also field configurable for use with two separate inverters. Many models are available in either Nema 3R or 4X versions and all with powder coated aluminum enclosures.

Each disconnecting combiner is capable of interfacing with up to two of our Emergency Disconnect Switches, the Birdhouse, located at ground level. Communications between combiner and the Birdhouse is via 600V cat5 cable. The disconnect assures verified visual and audible indication of PV voltage status.

Disconnecting combiners available in 4, 6, 8 and 16 string versions.
