

# Asset Alignment with Bloom's Taxonomy

## Medical Insurance and Coding

### We Take Students Higher

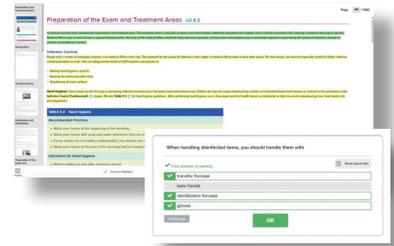

As a learning science company, we create content that builds up higher-order thinking skills. Within McGraw-Hill Connect®, we tag it accordingly so you can filter your search, assign it, and receive reporting on it. These content asset types can be associated with one or more levels of Bloom's Taxonomy.

The chart below shows a few of the key assignable assets within Connect aligned with these levels. Take your students higher by assigning a variety of applications, moving them from simple memorization to concept application. For more information, visit: [mheducation.link/HealthProfessions](https://mheducation.link/HealthProfessions).

		SmartBook®	EHRclinic Exercises	Coding Case Studies	Interactive Exercises	Forms Exercises	Testbank Questions
Higher-Order Thinking Skills ↑	CREATE						
	EVALUATE						
Lower-Order Thinking Skills ↓	ANALYZE						✓
	APPLY		✓	✓	✓	✓	✓
	UNDERSTAND	✓	✓	✓	✓	✓	✓
	REMEMBER	✓	✓	✓	✓	✓	✓

## SmartBook

SmartBook contains the same content as the print book, but actively tailors that content to the needs of the individual. Adaptive technology guides the student to master and remember key concepts, which targets gaps in knowledge and offers customized feedback.

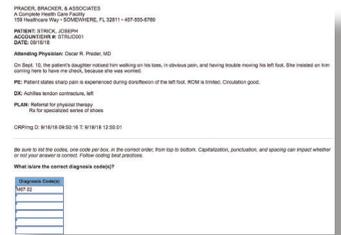

## EHRclinic Exercises

EHRclinic exercises provide students the experience of working in a live, modern electronic health record application with the convenience and reliability of simulated educational solutions. EHRclinic exercises allow students to practice completing electronic claims.

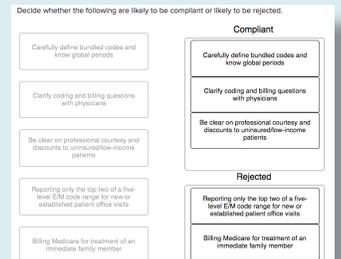

## Medical Coding Case Studies

Realistic case studies provide real-world experience in abstracting patient information from patient records (with names and other identifying information changed) to practice ICD-10-CM, ICD-10-PCS, CPT®, and HCPCS Level II coding for both inpatients and outpatients. Coding practice includes short coding scenarios and realistic case notes.

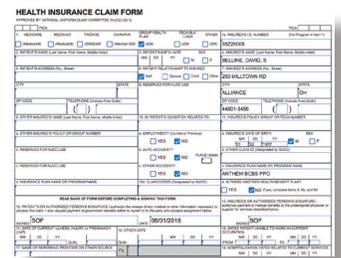

## Interactive Exercises

Interactive exercises in Connect include matching, sequencing, and labeling. These exercises bring key concepts to life which drives student engagement and critical-thinking skills.

## Forms Exercises

Completing CMS-1500 and UB-04 forms provide an alternative way to complete the claims exercises in Connect. These exercises allow students to complete the necessary fields of the form in an auto-graded environment. Blank CMS-1500 and UB-04 forms are included in the Appendix for hands-on practice as well.

## Testbank Questions

Hundreds of questions assess student understanding of content, skills, procedures, and general knowledge of medical insurance and coding. Questions can be filtered by levels of Bloom's Taxonomy, certification competencies, question type, and learning objectives.
