Introduction: Genetics in the Twenty-First Century

Chapter 1

Genetics: The Study of Biological Information

1.1 DNA: Life's Fundamental Information Molecule
1.2 Proteins: The Functional Molecules of Life Processes
1.3 Molecular Similarities of All Life-Forms
1.4 The Modular Construction of Genomes
1.5 Modern Genetic Techniques
1.6 Human Genetics and Society

Part I

Basic Principles: How Traits are Transmitted

Chapter 2

Mendel's Principles of Heredity

2.1 The Puzzle of Inheritance
2.2 Genetics: Analysis According to Mendel
2.3 Mendelian Inheritance in Humans
- - Genetics and Society: Developing Guidelines for Genetic Screening

Chapter 3

Extensions to Mendel's Laws

3.1 Extensions to Mendel for Single-Gene Inheritance
3.2 Extensions to Mendel for Two-Gene Inheritance
3.3 Extensions to Mendel for Multifactorial Inheritance
- - Genetics and Society: Disease Prevention Versus the Right to Privacy

Chapter 4

The Chromosome Theory of Inheritance

4.1 Chromosomes: The Carriers of Genes
4.2 Sex Chromosomes and Sex Determination
4.3 Mitosis: Cell Division That Preserves Chromosome Number
4.4 Meiosis: Cell Divisions That Halve Chromosome Number
4.5 Gametogenesis
4.6 Validation of the Chromosome Theory
4.7 Sex-Linked and Sexually Dimorphic Traits in Humans
- - Genetics and Society: Prenatal Genetic Diagnosis
- - Fast Forward: Transgenic Mice Prove That SRY Is the Maleness Factor
- - Fast Forward: Visualizing X Chromosome Inactivation in Transgenic Mice

Chapter 5

Linkage, Recombination, and the Mapping of Genes on Chromosomes

5.1. Gene Linkage and Recombination
5.2 Recombination: A Result of Crossing-Over During Meiosis
5.3 Mapping: Locating Genes Along a Chromosome
5.4 The Chi-Square Test and Linkage Analysis
5.5 Tetrad Analysis in Fungi
5.6 Mitotic Recombination and Genetic Mosiacs
- - Fast Forward: Mapping the Crossovers that Generate the Chromosomes of Individual Human Sperm
- - Fast Forward: Gene Mapping May Lead to a Cure for Cystic Fibrosis
- - Tools of Genetics: The Chi-Square Test for Goodness of Fit
- - Genetics and Society: Mitotic Recombination and Cancer Formation

Part II

What Genes Are and What They Do

Chapter 6

DNA Structure, Replication, and Recombination

6.1 Experimental Evidence for DNA as the Genetic Material
6.2 The Watson and Crick Double Helix Model of DNA
6.3 Genetic Information in Nucleotide Sequence
6.4 DNA Replication
6.5 Homologous Recombination at the DNA Level
6.6 Site Specific Recombination

Chapter 7

Anatomy and Function of a Gene: Dissection Through Mutation

7.1 Mutations: Primary Tools of Genetic Analysis
7.2 Molecular Mechanisms That Alter DNA Sequence
7.3 DNA Repair Mechanisms
7.4 What Mutations Tell Us About Gene Structure
7.5 What Mutations Tell Us About Gene Function
7.6 A Comprehensive Example: Mutations That Affect Vision
- - Fast Forward: Trinucleotide Repeat Diseases: Huntington Disease and Fragile X Syndrome

Chapter 8

Gene Expression: The Flow of Information from DNA to RNA to Protein

8.1 The Genetic Code
8.2 Transcription: From DNA to RNA
8.3 Translation: From mRNA to Protein
8.4 Differences in Gene Expressions Between Prokaryotes and Eukaryotes
8.5 The Effects of Mutations on Gene Expression and Function
- - Genetics and Society: HIV and Reverse Transcription

Part III

Analysis of Genetic Information

Chapter 9

Digital Analysis of DNA

9.1 Fragmenting DNA
9.2 Cloning DNA Fragments
9.3 Sequencing DNA
9.4 Sequencing Genomes
- - Tools of Genetics: Serendipity in Science: The Discovery of Restriction Enzymes

Chapter 10

Genome Annotation

10.1 Finding the Genes in Genomes
10.2 Genome Architecture and Evolution
10.3 Bioinformatics: Information Technology and Genomes
10.4 A Comprehensive Example: The Hemoglobin Genes

Chapter 11

Analyzing Genomic Variation

11.1 Variation Among Genomes
11.2 Genotyping a Known Disease-Causing Mutation
11.3 Samplilng DNA Variation in a Genome
11.4 Positional Cloning
11.5 The Era of Whole-Genome Sequencing
- - Tools of Genetics: The Lod Score Statistic

Part IV

How Genes Travel on Chromosomes

Chapter 12

The Eukaryotic Chromosome

12.1 Chromosomal DNA and Proteins
12.2 Chromosome Structure and Compaction

12.3 Chromosomal Packaging and Gene Expression
12.4 Replication of Eukaryotic Chromosomes
12.5 Chromosome Segregation
12.6 Artificial Chromosomes

Chapter 13

Chromosomal Rearrangements and Changes in Chromosome Number

13.1 Rearrangements of Chromosomal DNA
13.2 The Effects of Rearrangements
13.3 Transposable Genetic Elements
13.4 Aberrations in Chromosome Number Aneuploidy
13.5 Variation in Number of Chromosome Sets: Euploidy
13.6 Genome Restructuring and Evolution
- - Fast Forward: Programmed DNA Rearrangements and the Immune System

Chapter 14

Bacterial Genetics

14.1 The Enormous Diversity of Bacteria
14.2 Bacteria Genomes
14.3 Bacteria as Experimental Organisms
14.4 Gene Transfer in Bacteria
14.5 Using Genetics to Study Bacterial Life
14.6 A Compresensive Example: How N. gonorrhoeae Became Resistant to Penicillin
- - Genetics and Society: The Human Microbiome Project

Chapter 15

Organellar Inheritance

15.1 Mitochondria and Their Genomes
15.2 Chloroplasts and Their Genomes
15.3 The Relationship Between Organellar and Nuclear Genomes
15.4 Non-Mendelian Inheritance of Mitochondria and Chloroplasts
15.5 Mutant Mitochondria and Human Disease
- - Genetics and Society: Mitochondrial DNA Tests as Evidence of Kinship in Argentine Courts
- - Fast Forward: Mitochondrial Eve

Part V

How Genes are Regulated

Chapter 16

Gene Regulation in Prokaryotes

16.1 The Elements of Prokaryotic Gene Expression
16.2 Regulation of Transcription Initiation via DNA-Binding Proteins
16.3 RNA-Mediated Mechanisms of Gene Regulation
16.4 Discovering and Manipulating Bacterial Gene Regulatory Mechanisms
16.5 A Comprehensive Example: Control of Bioluminescence by Quorum Sensing

Chapter 17

Gene Regulation in Eukaryotes

17.1 Overview of Eukaryotic Gene Regulation
17.2 Control of Transcription Initiation Through Enhancers
17.3 Epigenetics
17.4 Regulation After Transcription
17.5 A Comprehensive Example: Sex Determination in Drosophila
- - Tools of Genetics: The Gal4/UASg Binary Gene Expression System

Part VI

Using Genetics

Chapter 18

Manipulating the Genomes of Eukaryotes

18.1 Creating Transgenic Organisms
18.2 Uses of Transgenic Organisms
18.3 Targeted Mutagenesis
18.4 Human Gene Therapy
- - Tools of Genetics: Cloning by Somatic Cell Nuclear Transfer
- - Tools of Genetics: How Bacteria Vaccinate Themselves Agains Viral Infections with CRISPR/Cas9
- - Genetics and Society: Should We Alter Human Germ-Line Genomes?

Chapter 19

The Genetic Analysis of Development

19.1 Model Organisms: Prototypes for Developmental Genetics
19.2 Mutagenesis Screens
19.3 Determining Where and When Genes Act
19.4 Ordering Genes in a Pathway
19.5 A Comprehensive Example: Body Plan Development in Drosophila

Chapter 20

The Genetics of Cancer

20.1 Characteristics of Cancer Cells
20.2 The Genetic Basis of Cancers
20.3 How Cell Division Is Normally Controlled
20.4 How Mutations Cause Cancer Phenotypes
20.5 Personalized Cancer Treatment
- - Tools of Genetics: Analysis of Cell-Cycle Mutants in Yeast

Part VII

Beyond the Individual Gene and Genome

Chapter 21

Variation and Selection in Populations

21.1 The Hardy-Weinberg Law: Predicting Genetic Variation in Ideal Populations
21.2 What Causes Allele Frequencies to Change in Real Populations?
21.3 Ancestry and the Evolution of Modern Humans

Chapter 22

The Genetics of Complex Traits

22.1 Heritability: Genetic Versus Environmental Influences on Complex Traits
22.2 Mapping Quantitative Trait Loci (QTLs)
- - Tools of Genetics: The Chi-Square Test for Independence

Guidelines for Gene Nomenclature
Brief Answer Section
